TABLE OF CONTENTS

Introduction 1

I. The factorization of rational matrix functions 6
1. Preliminaries on factorizations of non-singular continuous matrix functions 6
2. Factorization of non-singular rational matrix functions 13
3. Factorization and singular integral operators 20
4. The partial indices of rational matrix functions 25
Notes 31

II. Decomposing algebras of matrix functions 34
1. Canonical factorization in decomposing Banach algebras 34
2. Factorization in decomposing algebras of scalar functions 39
3. Factorization in decomposing $\mathcal{R}$-algebras of matrix functions 44
4. The general theorem on factorization in decomposing algebras 47
5. Complements to the theorem on factorization in decomposing algebras 56
6. Examples 58
7. Systems of homogeneous barrier problems 63
Notes 71

III. Canonical factorizations of continuous matrix functions 73
1. Sufficient conditions for canonical factorization 73
2. Canonical factorization of self-adjoint matrix functions on the unit circle 78

3. The failure of canonical factorization of dissipative matrix functions on non-circular contours 81
4. Canonical factorization of nearly analytic dissipative matrix functions 86
Notes 89

IV. Factorization of triangular matrix functions 91
1. Factorization of triangular matrix functions 91
2. The partial indices of triangular matrix functions of the second order 98
3. Matrix functions of mixed triangular type 101
Notes 112

V. Factorization of continuous self-adjoint matrix functions on the unit circle 113
1. General results on the partial indices of self-adjoint matrix functions 113
2. The factorization of self-adjoint matrix functions relative to the unit circle 115
Notes 121

VI. Miscellaneous results on factorization relative to a contour 122
1. Multiple extensions of matrix functions 122
2. A method of reduction to canonical factorization 128
3. Factorization of operator functions 133
Notes 140

VII. Generalized factorization 141
1. Definition and basic properties of generalized factorization 141

2. Generalized factorization and singular integral operators on L_p 146
3. Factorization and Fredholm operators 155
Notes 164

VIII. Further results concerning generalized factorization 165
1. Generalized factorization of continuous matrix functions 165
2. Generalized factorization of piecewise continuous matrix functions 168
3. Factorization and shift bases 173
4. Extensions of results on dissipative and self-adjoint matrix functions on the unit circle 177
5. Generalized factorization relative to $L_2(\Gamma_0)$ 182
Notes 188

IX. Local principles in the theory of factorization 189
1. A local principle for factorization relative to a contour 189
2. A local principle for generalized factorization 194
3. Further remarks on the local principle 202
Notes 203

X. Perturbations and stability 204
1. Stability of canonical factorization 204
2. The stability of partial indices 207
3. The partial indices of matrix functions depending analytically on a parameter 214
4. Rational matrix functions of two variables 216
Notes 223
