## PART 1: SEEDS AS A MAJOR WORLD RESOURCE

**1 The value of seeds** **3**
M. J. GOODING, A. J. MURDOCH and R. H. ELLIS

1.1 Introduction 3
1.2 The use of seeds as crop products 3
1.2.1 Cereals 4
1.2.2 Legumes 13
1.2.3 Other oilseed crops 16
1.3 The use of seeds in crop establishment 19
1.3.1 The scale of seed production 20
1.3.2 Regulation of seed production 21
1.3.3 Crop establishment 25
1.4 The value of seeds for natural regeneration 29
1.4.1 Dormancy and quiescence 30
1.4.2 Annual cycles in dormancy 31
1.4.3 Regeneration from seed 32
1.5 Value of seeds in plant genetic conservation 34
1.6 The future 35
References 36

**2 Seed proteins** **42**
P. R. SHEWRY

2.1 Introduction 42
2.1.1 Seeds as sources of proteins 42
2.2 The classification and nomenclature of seed proteins 43
2.3 Storage proteins 44
2.3.1 2S albumins 46
2.3.2 7S and 11S globulins 47
2.3.3 Prolamins 49
2.4 Structural and evolutionary relationships of storage proteins 49
2.4.1 7S and 11S globulins 49
2.4.2 Prolamins and 2S albumins 52
2.5 Protective proteins 55
2.5.1 Enzyme inhibitors 55
2.5.2 Endohydrolases 57
2.5.3 Lectins 57
2.5.4 Other antifungal proteins 57
2.5.5 Distribution of protective proteins 58
2.6 Structural and metabolic proteins 58
2.7 Supply of amino acids to the developing seed 58

2.8 Synthesis and deposition of seed storage proteins 59
2.9 Seed protein gene expression 61
2.10 Seed proteins and nutritional quality 63
2.11 Improving nutritional quality 65
2.12 Allergy and intolerance to seed proteins 68
2.13 Seed proteins and processing quality 69
2.13.1 Wheat gluten proteins and food processing 69
2.13.2 The functional properties of soybean proteins 72
2.14 Novel sources of seed proteins 73
2.15 Expression of novel proteins in plants 74
2.16 Conclusions 77
Acknowledgements 77
References 77

**3 Seed carbohydrates 85**
M. P. COCHRANE

3.1 Introduction 85
3.2 Sugars 85
3.2.1 Monosaccharides and disaccharides 85
3.2.2 Oligosaccharides 87
3.3 Cyclitols 89
3.4 Fructans 91
3.5 Cell wall carbohydrates 93
3.5.1 Homopolymers 94
3.5.2 Heteropolymers 96
3.6 Starches 102
3.6.1 Starch granule characteristics 103
3.6.2 Starch granule development 104
3.6.3 Starch granule size distribution 105
3.6.4 Starch granule structure and composition 106
3.6.5 Starch biosynthesis 109
3.6.6 Mobilization of starch 110
3.6.7 Transitory starch 111
3.6.8 Starches for food and non-food industries 111
References 113

**4 Seed oils and their metabolic engineering 121**
J. WALLIS, J. SHOCKEY and J. BROWSE

4.1 Introduction 121
4.1.1 Advantages of oilseed engineering 121
4.1.2 Oil storage in seeds 122
4.1.3 Unusual fatty acids in seeds 124
4.2 The biochemistry of seed oils 125
4.2.1 The carbon source for storage oils 125
4.2.2 Fatty acid synthesis in plastids 126
4.2.3 Reactions of *de novo* fatty acid synthesis 126
4.2.4 Acyl-ACP thioesterases and desaturases 128
4.2.5 Synthesis of triacylglycerols and membrane lipids in the endoplasmic reticulum 130

4.3 Molecular biology of lipid metabolism and oilseed engineering 135
4.3.1 Gene discovery 135
4.3.2 Genes of *de novo* fatty acid synthesis 137
4.3.3 Fatty acid modifying genes 142
4.3.4 Triacylglycerol synthesis 144
4.4 Engineering plant oils for industry 145
4.4.1 High oleic acid oil 146
4.4.2 Epoxidized and acetylenic oils 147
4.4.3 High laurate rapeseed oil 148
4.4.4 Jojoba oil 149
4.5 The future of oilseed engineering 149
References 151

**PART 2: SPECIAL CASES AND USES**

**5 The wheat grain: new research developments and approaches to improvement 161**
C. MARX, P. G. LEMAUX and B. B. BUCHANAN

5.1 Introduction 161
5.2 Physiology and biochemistry of wheat in relation to use 162
5.2.1 The wheat grain 162
5.2.2 Biochemical composition of wheat endosperm 162
5.2.3 Gluten and its properties 164
5.3 Wheat quality improvement technology 165
5.3.1 Criteria of quality in relation to use 165
5.3.2 Quality improvement through classical breeding 166
5.3.3 Wheat processing improvements 167
5.3.4 Additives to improve flour quality 168
5.3.5 Modifications of disulphide linkages of gluten 169
5.4 Molecular approaches to wheat improvement 170
5.4.1 Marker-assisted selection 171
5.4.2 Genomic tools 171
5.4.3 *In vitro* manipulation and non-sexual gene transfer methods 172
5.4.4 Use of non-sexual gene transfer for wheat improvement 173
References 181

**6 Barley biotechnology 184**
P. C. BETHKE, J. V. JACOBSEN and R. L. JONES

6.1 Introduction 184
6.2 Barley domestication 184
6.3 Uses of barley 186
6.3.1 Food and feed 186
6.3.2 Malting and brewing 187
6.3.3 Industrial uses 188
6.4 Grain development 188
6.4.1 Endosperm and embryo 189
6.4.2 Maternal tissues 193

6.4.3 Synthesis of endosperm reserves 195
6.4.4 Dormancy 199
6.5 Mobilization of endosperm reserves 201
6.5.1 Mobilization of aleurone cell reserves 201
6.5.2 Synthesis and secretion of hydrolytic enzymes 202
6.5.3 Hydrolysis of nutrients within the starchy endosperm 204
6.5.4 The role of the scutellum in starchy endosperm mobilization 205
6.6 Biotechnology 206
6.6.1 Transformation breeding 206
6.6.2 Selectable, marker-free transformants 207
6.6.3 Limitations to barley transformation 208
6.6.4 Mutation breeding 209
6.7 Improving barley through biotechnology 210
6.7.1 Starch synthesis and hydrolysis 211
6.7.2 Non-starch polysaccharides 212
6.7.3 Protein synthesis and hydrolysis 212
6.7.4 Lipid 213
6.7.5 Polyphenols 213
6.7.6 Off flavour 214
6.7.7 Recombinant protein production 214
6.8 Application of transgenic technology 214
6.8.1 Genes targeted to aleurone cells 215
6.8.2 Genes targeted to the starchy endosperm 217
6.8.3 Genes for disease resistance 217
6.9 Concluding remarks 218
References 219

**7 Molecular farming using seeds as hosts 226**
M. M. MOLONEY

7.1 Seeds as natural repositories for stored proteins 226
7.1.1 Modified seed-storage proteins 226
7.1.2 Modified oleosin proteins 227
7.1.3 Regulation of seed-specific expression 228
7.2 Strategies for protein targeting 230
7.2.1 Importance of the secretory pathway 231
7.2.2 Vacuolar targeting 232
7.2.3 Targeting to oilbodies 232
7.2.4 Plastid targeting 234
7.2.5 Implications of subcellular targeting for recombinant proteins 236
7.3 Examples of recombinant proteins produced in seeds 238
7.3.1 Enzymes 238
7.3.2 Therapeutic factors 240
7.3.3 Diagnostic reagents 241
7.3.4 Antibodies (plantibodies) in seeds 243
7.4 Advantages of seeds for molecular farming 243
7.4.1 Long-term storage and stability 243
7.4.2 Expression levels 245
7.4.3 Microbial contamination 245
7.5 Recovery of recombinant proteins from seeds 246
7.5.1 Aqueous extraction systems 246

7.5.2 Two-phase extraction systems 248
7.6 Conclusions and prospects for seed-based plant molecular farming 249
References 250

## PART 3: ENHANCING SEED PERFORMANCE

**8 Commercial seed treatment technology 257**
P. HALMER

8.1 Introduction 257
8.1.1 Scope 257
8.1.2 The enhancement of seed quality and performance 258
8.1.3 Factors affecting choice of treatments used 259
8.2 Seed production and treatment 261
8.2.1 Commercial seed industry framework 261
8.2.2 Breeding 262
8.3 Outline of processing technologies 263
8.3.1 Processing 263
8.3.2 Conventional cleaning and sorting techniques 263
8.3.3 Novel sorting techniques 264
8.3.4 Effects of sorting on seed quality 265
8.4 Quality testing 266
8.4.1 International organization of seed testing 266
8.4.2 Germination 267
8.4.3 Health 267
8.4.4 Verification of species and cultivar 268
8.4.5 Vigour 268
8.5 Germination enhancement: changing the physiological state of the seed 271
8.5.1 Overcoming dormancy 271
8.5.2 Priming 272
8.5.3 Steeping and other wet enhancement techniques 272
8.5.4 Pregerminated seed 273
8.6 Disease and pest control 273
8.6.1 Pesticide formulations 274
8.6.2 Equipment for 'conventional' treatment with pesticides 275
8.6.3 Immersion and physical treatment methods 276
8.7 Coating: modifying seed form and germination performance 276
8.7.1 Use of filmcoating 276
8.7.2 Filmcoating equipment 277
8.7.3 Uses of coating 278
8.7.4 Coating equipment and techniques 279
8.7.5 Coatings to apply biological inoculants 281
8.7.6 Coatings to modify germination properties 282
8.8 Future directions 283
References 283

**9 Seed priming 287**
M. B. McDONALD

9.1 Introduction 287

9.1.1 Seed priming: its importance to the seed industry 287
9.2 Seed priming terminology and concepts 289
9.2.1 Terminology 289
9.2.2 Concepts 289
9.3 Seed priming technology 294
9.3.1 Hydropriming 294
9.3.2 Osmopriming 295
9.3.3 Matripriming 299
9.3.4 Pregermination 300
9.4 Factors affecting priming 301
9.4.1 Differences in priming techniques 301
9.4.2 Environmental variables 302
9.4.3 Seed quality differences 303
9.4.4 Drying rates 304
9.4.5 Addition of promotive substances 305
9.4.6 Time in seed storage 306
9.4.7 Seed dormancy 306
9.5 Priming influence on germination 307
9.5.1 Proteins 307
9.5.2 Nucleic acid synthesis 308
9.6 Priming and repair 308
9.6.1 Repair in priming 310
9.6.2 When does repair occur? 311
9.6.3 Where is the location of repair? 311
9.6.4 What is the mechanism of repair? 312
9.7 Model of seed deterioration and repair during priming 313
9.7.1 Storage 313
9.7.2 Imbibition (hydration/priming) 315
Summary 315
References 316

**10 Seed substitutes from the laboratory 326**
D. R. CYR

10.1 Introduction 326
10.2 The role of somatic embryogenesis in forestry 326
10.3 Review of somatic embryogenesis for tree species 327
10.3.1 Angiosperms 327
10.3.2 Gymnosperms 329
10.4 Review of somatic embryogenesis technology development 330
10.4.1 Angiosperms 335
10.4.2 Gymnosperms: Coniferales 340
10.5 Somatic embryogenesis scale-up; synseed delivery and packaging options 347
10.6 Somatic embryogenesis commercialization: spruce 351
10.7 Intellectual property issues 355
10.7.1 Overview 355
10.7.2 Conifer somatic embryogenesis 355
10.7.3 Synseed and delivery systems 357
10.8 Summary 357
Acknowledgements 357
References 358

## PART 4: OUR THREATENED GERMPLASM

**11 Keeping seeds alive** **375**
R. J. PROBERT and F. R. HAY

11.1 Introduction 375
11.2 Maintaining seed viability 377
11.2.1 Seed storage categories 377
11.2.2 Measuring seed moisture and moisture isotherms 378
11.2.3 Predicting the longevity of orthodox seeds 380
11.2.4 The optimum moisture content debate 385
11.2.5 Gaseous environment and orthodox seed longevity 387
11.2.6 Practical advice for storing orthodox seeds 388
11.2.7 Notes on the storage of non-orthodox seeds 388
11.3 The development of seed quality 390
11.3.1 Parameters of seed development 390
11.3.2 The timing of seed quality traits 392
11.3.3 Preharvest losses 394
11.3.4 Maturity and the effects of drying rate on seed quality 394
11.3.5 Assessing seed quality 396
11.3.6 Correlants of seed deterioration 397
11.4 Factors affecting seed drying rate 398
11.4.1 Introduction 398
11.4.2 Seed size and structure 399
11.4.3 Seed oil content 399
11.4.4 Air velocity 399
11.4.5 Temperature 400
11.5 Outline of seed drying methods 400
11.5.1 Equipment 400
11.5.2 Artificial desiccants 401
11.5.3 How much desiccant? 401
11.5.4 Sun/shade drying 402
11.6 Water is the key 403
Acknowledgements 403
References 404
