Preface vii

PART I PERSPECTIVE AND PROCESS 1

1 Learning in and about Complex Systems 3

1.1 Introduction 3

1.1.1 *Policy Resistance, the Law of Unintended Consequences, and the Counterintuitive Behavior of Social Systems* 5

1.1.2 *Causes of Policy Resistance* 10

1.1.3 *Feedback* 12

1.1.4 *Process Point: The Meaning of Feedback* 14

Challenge: Dynamics of Multiple-Loop Systems 14

1.2 Learning Is a Feedback Process 14

1.3 Barriers to Learning 19

1.3.1 *Dynamic Complexity* 21

1.3.2 *Limited Information* 23

1.3.3 *Confounding Variables and Ambiguity* 25

1.3.4 *Bounded Rationality and the Misperceptions of Feedback* 26

1.3.5 *Flawed Cognitive Maps* 28

1.3.6 *Erroneous Inferences about Dynamics* 29

1.3.7 *Unscientific Reasoning: Judgmental Errors and Biases* 30

Challenge: Hypothesis Testing 30

1.3.8 *Defensive Routines and Interpersonal Impediments to Learning* 32

1.3.9 *Implementation Failure* 33

1.4 Requirements for Successful Learning in Complex Systems 33

1.4.1 *Improving the Learning Process: Virtues of Virtual Worlds* 34

1.4.2 *Pitfalls of Virtual Worlds* 35

1.4.3 *Why Simulation Is Essential* 37

1.5 Summary 39

2	System Dynamics in Action	41
2.1	Applications of System Dynamics	41
2.2	Automobile Leasing Strategy: Gone Today, Here Tomorrow	42
2.2.1	<i>Dynamic Hypothesis</i>	44
2.2.2	<i>Elaborating the Model</i>	48
2.2.3	<i>Policy Analysis</i>	51
2.2.4	<i>Impact and Follow-up</i>	54
2.3	On Time and Under Budget: The Dynamics of Project Management	55
2.3.1	<i>The Claim</i>	56
2.3.2	<i>Initial Model Development</i>	57
2.3.3	<i>Dynamic Hypothesis</i>	58
2.3.4	<i>The Modeling Process</i>	61
2.3.5	<i>Continuing Impact</i>	64
2.4	Playing the Maintenance Game	66
2.4.1	<i>Dynamic Hypothesis</i>	67
2.4.2	<i>The Implementation Challenge</i>	74
2.4.3	<i>Results</i>	76
2.4.4	<i>Transferring the Learning: The Lima Experience</i>	77
2.5	Summary: Principles for Successful Use of System Dynamics	79
3	The Modeling Process	83
3.1	The Purpose of Modeling: Managers as Organization Designers	84
3.2	The Client and the Modeler	84
3.3	Steps of the Modeling Process	85
3.4	Modeling Is Iterative	87
3.5	Overview of the Modeling Process	89
3.5.1	<i>Problem Articulation: The Importance of Purpose</i>	89
3.5.2	<i>Formulating a Dynamic Hypothesis</i>	94
3.5.3	<i>Formulating a Simulation Model</i>	102
3.5.4	<i>Testing</i>	103
3.5.5	<i>Policy Design and Evaluation</i>	103
3.6	Summary	104
4	Structure and Behavior of Dynamic Systems	107
4.1	Fundamental Modes of Dynamic Behavior	108
4.1.1	<i>Exponential Growth</i>	108
4.1.2	<i>Goal Seeking</i>	111
4.1.3	<i>Oscillation</i>	114
4.1.4	<i>Process Point</i>	116
	Challenge: Identifying Feedback Structure from System Behavior	117
4.2	Interactions of the Fundamental Modes	118
4.2.1	<i>S-Shaped Growth</i>	118
4.2.2	<i>S-Shaped Growth with Overshoot</i>	121
	Challenge: Identifying the Limits to Growth	121
4.2.3	<i>Overshoot and Collapse</i>	123
4.3	Other Modes of Behavior	127
4.3.1	<i>Stasis, or Equilibrium</i>	127

	4.3.2	<i>Randomness</i>	127
	4.3.3	<i>Chaos</i>	129
	4.4	Summary	133
PART II TOOLS FOR SYSTEMS THINKING 135			
5	Causal Loop Diagrams		137
5.1	Causal Diagram Notation		137
5.2	Guidelines for Causal Loop Diagrams		141
	5.2.1	<i>Causation versus Correlation</i>	141
	5.2.2	<i>Labeling Link Polarity</i>	142
		Challenge: Assigning Link Polarities	143
	5.2.3	<i>Determining Loop Polarity</i>	143
		Challenge: Identifying Link and Loop Polarity	145
		Challenge: Employee Motivation	147
	5.2.4	<i>Name Your Loops</i>	148
	5.2.5	<i>Indicate Important Delays in Causal Links</i>	150
	5.2.6	<i>Variable Names</i>	152
	5.2.7	<i>Tips for Causal Loop Diagram Layout</i>	153
	5.2.8	<i>Choose the Right Level of Aggregation</i>	154
	5.2.9	<i>Don't Put All the Loops into One Large Diagram</i>	154
	5.2.10	<i>Make the Goals of Negative Loops Explicit</i>	155
	5.2.11	<i>Distinguish between Actual and Perceived Conditions</i>	156
5.3	Process Point: Developing Causal Diagrams from Interview Data		157
		Challenge: Process Improvement	158
5.4	Conceptualization Case Study: Managing Your Workload		159
	5.4.1	<i>Problem Definition</i>	159
	5.4.2	<i>Identifying Key Variables</i>	160
	5.4.3	<i>Developing the Reference Mode</i>	160
	5.4.4	<i>Developing the Causal Diagrams</i>	163
	5.4.5	<i>Limitations of the Causal Diagram</i>	166
		Challenge: Policy Analysis with Causal Diagrams	168
5.5	Adam Smith's Invisible Hand and the Feedback Structure of Markets		169
		Challenge: The Oil Crises of the 1970s	172
		Challenge: Speculative Bubbles	173
		Challenge: The Thoroughbred Horse Market	174
	5.5.1	<i>Market Failure, Adverse Selection, and the Death Spiral</i>	174
		Challenge: The Medigap Death Spiral	176
5.6	Explaining Policy Resistance: Traffic Congestion		177
	5.6.1	<i>Mental Models of the Traffic Problem</i>	178
	5.6.2	<i>Compensating Feedback: The Response to Decreased Congestion</i>	181
	5.6.3	<i>The Mass Transit Death Spiral</i>	185
	5.6.4	<i>Policy Analysis: The Impact of Technology</i>	188
	5.6.5	<i>Compensating Feedback: The Source of Policy Resistance</i>	189

	Challenge: Identifying the Feedback Structure of Policy Resistance	190
5.7	Summary	190
6	Stocks and Flows	191
6.1	Stocks, Flows, and Accumulation	191
6.1.1	<i>Diagramming Notation for Stocks and Flows</i>	192
6.1.2	<i>Mathematical Representation of Stocks and Flows</i>	193
6.1.3	<i>The Contribution of Stocks to Dynamics</i>	195
6.2	Identifying Stocks and Flows	197
6.2.1	<i>Units of Measure in Stock and Flow Networks</i>	198
6.2.2	<i>The Snapshot Test</i>	199
	Challenge: Identifying Stocks and Flows	201
6.2.3	<i>Conservation of Material in Stock and Flow Networks</i>	201
6.2.4	<i>State-Determined Systems</i>	202
6.2.5	<i>Auxiliary Variables</i>	202
6.2.6	<i>Stocks Change Only through Their Rates</i>	204
6.2.7	<i>Continuous Time and Instantaneous Flows</i>	206
6.2.8	<i>Continuously Divisible versus Quantized Flows</i>	207
6.2.9	<i>Which Modeling Approach Should You Use?</i>	208
6.2.10	<i>Process Point: Portraying Stocks and Flows in Practice</i>	209
6.3	Mapping Stocks and Flows	210
6.3.1	<i>When Should Causal Loop Diagrams Show Stock and Flow Structure?</i>	210
	Challenge: Adding Stock and Flow Structure to Causal Diagrams	211
	Challenge: Linking Stock and Flow Structure with Feedback	212
6.3.2	<i>Aggregation in Stock and Flow Mapping</i>	213
	Challenge: Modifying Stock and Flow Maps	213
	Challenge: Disaggregation	214
6.3.3	<i>Guidelines for Aggregation</i>	216
6.3.4	<i>System Dynamics in Action: Modeling Large-Scale Construction Projects</i>	218
6.3.5	<i>Setting the Model Boundary: "Challenging the Clouds"</i>	222
6.3.6	<i>System Dynamics in Action: Automobile Recycling</i>	225
6.4	Summary	229
7	Dynamics of Stocks and Flows	231
7.1	Relationship between Stocks and Flows	232
7.1.1	<i>Static and Dynamic Equilibrium</i>	232
7.1.2	<i>Calculus without Mathematics</i>	232
7.1.3	<i>Graphical Integration</i>	234
	Challenge: Graphical Integration	239
7.1.4	<i>Graphical Differentiation</i>	239
	Challenge: Graphical Differentiation	241
7.2	System Dynamics in Action: Global Warming	241

7.3	System Dynamics in Action: The War on Drugs	250
7.3.1	<i>The Cocaine Epidemic after 1990</i>	258
7.4	Summary	262
8	Closing the Loop: Dynamics of Simple Structures	263
8.1	First-Order Systems	263
8.2	Positive Feedback and Exponential Growth	264
8.2.1	<i>Analytic Solution for the Linear First-Order System</i>	265
8.2.2	<i>Graphical Solution of the Linear First-Order Positive Feedback System</i>	266
8.2.3	<i>The Power of Positive Feedback: Doubling Times</i>	268
	Challenge: Paper Folding	268
8.2.4	<i>Misperceptions of Exponential Growth</i>	269
8.2.5	<i>Process Point: Overcoming Overconfidence</i>	272
8.3	Negative Feedback and Exponential Decay	274
8.3.1	<i>Time Constants and Half-Lives</i>	279
	Challenge: Goal-Seeking Behavior	281
8.4	Multiple-Loop Systems	282
8.5	Nonlinear First-Order Systems: S-Shaped Growth	285
	Challenge: Nonlinear Birth and Death Rates	286
8.5.1	<i>Formal Definition of Loop Dominance</i>	288
8.5.2	<i>First-Order Systems Cannot Oscillate</i>	290
8.6	Summary	290
PART III	THE DYNAMICS OF GROWTH	293
9	S-Shaped Growth: Epidemics, Innovation Diffusion, and the Growth of New Products	295
9.1	Modeling S-Shaped Growth	296
9.1.1	<i>Logistic Growth</i>	296
9.1.2	<i>Analytic Solution of the Logistic Equation</i>	297
9.1.3	<i>Other Common Growth Models</i>	299
9.1.4	<i>Testing the Logistic Model</i>	300
9.2	Dynamics of Disease: Modeling Epidemics	300
9.2.1	<i>A Simple Model of Infectious Disease</i>	300
9.2.2	<i>Modeling Acute Infection: The SIR Model</i>	303
9.2.3	<i>Model Behavior: The Tipping Point</i>	305
	Challenge: Exploring the SIR Model	308
9.2.4	<i>Immunization and the Eradication of Smallpox</i>	309
	Challenge: The Efficacy of Immunization Programs	310
9.2.5	<i>Herd Immunity</i>	312
9.2.6	<i>Moving Past the Tipping Point: Mad Cow Disease</i>	314
	Challenge: Extending the SIR Model	316
9.2.7	<i>Modeling the HIV/AIDS Epidemic</i>	319
	Challenge: Modeling HIV/AIDS	321
9.3	Innovation Diffusion as Infection: Modeling New Ideas and New Products	323
9.3.1	<i>The Logistic Model of Innovation Diffusion: Examples</i>	325

9.3.2	<i>Process Point: Historical Fit and Model Validity</i>	328
9.3.3	<i>The Bass Diffusion Model</i>	332
	Challenge: Phase Space of the Bass Diffusion Model	333
9.3.4	<i>Behavior of the Bass Model</i>	334
	Challenge: Critiquing the Bass Diffusion Model	334
	Challenge: Extending the Bass Model	335
9.3.5	<i>Fad and Fashion:</i>	
	<i>Modeling the Abandonment of an Innovation</i>	339
	Challenge: Modeling Fads	341
9.3.6	<i>Replacement Purchases</i>	342
	Challenge: Modeling the Life Cycle of Durable Products	345
9.4	Summary	346
10	Path Dependence and Positive Feedback	349
10.1	Path Dependence	349
	Challenge: Identifying Path Dependence	353
10.2	A Simple Model of Path Dependence: The Polya Process	354
10.2.1	<i>Generalizing the Model: Nonlinear Polya Processes</i>	357
10.3	Path Dependence in the Economy: VHS versus Betamax	359
	Challenge: Formulating a Dynamic Hypothesis for the VCR Industry	364
10.4	Positive Feedback: The Engine of Corporate Growth	364
10.4.1	<i>Product Awareness</i>	365
10.4.2	<i>Unit Development Costs</i>	367
10.4.3	<i>Price and Production Cost</i>	368
10.4.4	<i>Network Effects and Complementary Goods</i>	370
10.4.5	<i>Product Differentiation</i>	371
10.4.6	<i>New Product Development</i>	373
10.4.7	<i>Market Power</i>	374
10.4.8	<i>Mergers and Acquisitions</i>	375
10.4.9	<i>Workforce Quality and Loyalty</i>	376
10.4.10	<i>The Cost of Capital</i>	378
10.4.11	<i>The Rules of the Game</i>	380
10.4.12	<i>Ambition and Aspirations</i>	380
10.4.13	<i>Creating Synergy for Corporate Growth</i>	382
10.5	Positive Feedback, Increasing Returns, and Economic Growth	385
10.6	Does the Economy Lock in to Inferior Technologies?	387
10.7	Limits to Lock In	389
10.8	Modeling Path Dependence and Standards Formation	391
10.8.1	<i>Model Structure</i>	392
10.8.2	<i>Model Behavior</i>	396
10.8.3	<i>Policy Implications</i>	402
	Challenge: Policy Analysis	403
	Challenge: Extending the Model	404
10.9	Summary	406
PART IV	TOOLS FOR MODELING DYNAMIC SYSTEMS	407
11	Delays	409
11.1	Delays: An Introduction	409

	Challenge: Duration and Dynamics of Delays	409
11.1.1	<i>Defining Delays</i>	411
11.2	Material Delays: Structure and Behavior	412
11.2.1	<i>What Is the Average Length of the Delay?</i>	413
11.2.2	<i>What Is the Distribution of the Output around the Average Delay Time?</i>	413
11.2.3	<i>Pipeline Delay</i>	415
11.2.4	<i>First-Order Material Delay</i>	415
11.2.5	<i>Higher-Order Material Delays</i>	417
11.2.6	<i>How Much Is in the Delay? Little's Law</i>	421
	Challenge: Response of Material Delays to Steps, Ramps, and Cycles	425
11.3	Information Delays: Structure and Behavior	426
11.3.1	<i>Modeling Perceptions: Adaptive Expectations and Exponential Smoothing</i>	428
11.3.2	<i>Higher-Order Information Delays</i>	432
11.4	Response to Variable Delay Times	434
	Challenge: Response of Delays to Changing Delay Times	435
11.4.1	<i>Nonlinear Adjustment Times: Modeling Ratchet Effects</i>	436
11.5	Estimating the Duration and Distribution of Delays	437
11.5.1	<i>Estimating Delays When Numerical Data Are Available</i>	437
11.5.2	<i>Estimating Delays When Numerical Data Are Not Available</i>	445
11.5.3	<i>Process Point: Walk the Line</i>	449
11.6	System Dynamics in Action: Forecasting Semiconductor Demand	449
11.7	Mathematics of Delays: Koyck Lags and Erlang Distributions	462
11.7.1	<i>General Formulation for Delays</i>	462
11.7.2	<i>First-Order Delay</i>	464
11.7.3	<i>Higher-Order Delays</i>	465
11.7.4	<i>Relation of Material and Information Delays</i>	466
11.8	Summary	466
12	Coflows and Aging Chains	469
12.1	Aging Chains	470
12.1.1	<i>General Structure of Aging Chains</i>	470
12.1.2	<i>Example: Population and Infrastructure in Urban Dynamics</i>	472
12.1.3	<i>Example: The Population Pyramid and the Demographic Transition</i>	474
12.1.4	<i>Aging Chains and Population Inertia</i>	480
12.1.5	<i>System Dynamics in Action: World Population and Economic Development</i>	481
12.1.6	<i>Case Study: Growth and the Age Structure of Organizations</i>	485
12.1.7	<i>Promotion Chains and the Learning Curve</i>	490

- 12.1.8 *Mentoring and On-The-Job Training* 493
- Challenge:** The Interactions of Training Delays and Growth 495
- 12.2 Coflows: Modeling the Attributes of a Stock 497
- Challenge:** Coflows 503
- 12.2.1 *Coflows with Nonconserved Flows* 504
- Challenge:** The Dynamics of Experience and Learning 508
- 12.2.2 *Integrating Coflows and Aging Chains* 509
- Challenge:** Modeling Design Wins in the Semiconductor Industry 511
- 12.3 Summary 511
- 13 Modeling Decision Making 513**
- 13.1 Principles for Modeling Decision Making 513
- 13.1.1 *Decisions and Decision Rules* 514
- 13.1.2 *Five Formulation Fundamentals* 516
- Challenge:** Finding Formulation Flaws 520
- 13.2 Formulating Rate Equations 522
- 13.2.1 *Fractional Increase Rate* 522
- 13.2.2 *Fractional Decrease Rate* 523
- 13.2.3 *Adjustment to a Goal* 523
- 13.2.4 *The Stock Management Structure:*
Rate = Normal Rate + Adjustments 524
- 13.2.5 *Flow = Resource * Productivity* 524
- 13.2.6 $Y = Y^* * \text{Effect of } X_1 \text{ on } Y * \text{Effect of } X_2 \text{ on } Y * \dots * \text{Effect of } X_n \text{ on } Y$ 525
- 13.2.7 $Y = Y^* + \text{Effect of } X_1 \text{ on } Y + \text{Effect of } X_2 \text{ on } Y + \dots + \text{Effect of } X_n \text{ on } Y$ 527
- Challenge:** Multiple Nonlinear Effects 529
- 13.2.8 *Fuzzy MIN Function* 529
- 13.2.9 *Fuzzy MAX Function* 530
- 13.2.10 *Floating Goals* 532
- Challenge:** Floating Goals 533
- Challenge:** Goal Formation with Internal and External Inputs 535
- 13.2.11 *Nonlinear Weighted Average* 535
- 13.2.12 *Modeling Search: Hill-Climbing Optimization* 537
- Challenge:** Finding the Optimal Mix of Capital and Labor 543
- 13.2.13 *Resource Allocation* 544
- 13.3 Common Pitfalls 545
- 13.3.1 *All Outflows Require First-Order Control* 545
- Challenge:** Preventing Negative Stocks 547
- 13.3.2 *Avoid IF ... THEN ... ELSE Formulations* 547
- 13.3.3 *Disaggregate Net Flows* 547
- 13.4 Summary 549
- 14 Formulating Nonlinear Relationships 551**
- 14.1 Table Functions 552
- 14.1.1 *Specifying Table Functions* 552
- 14.1.2 *Example: Building a Nonlinear Function* 552

- 14.1.3 *Process Point: Table Functions versus Analytic Functions* 562
- 14.2 Case Study: Cutting Corners versus Overtime 563
 - Challenge:** Formulating Nonlinear Functions 566
 - 14.2.1 *Working Overtime: The Effect of Schedule Pressure on Workweek* 567
 - 14.2.2 *Cutting Corners: The Effect of Schedule Pressure on Time per Task* 568
- 14.3 Case Study: Estimating Nonlinear Functions with Qualitative and Numerical Data 569
 - Challenge:** Refining Table Functions with Qualitative Data 569
- 14.4 Common Pitfalls 573
 - 14.4.1 *Using the Wrong Input* 573
 - Challenge:** Critiquing Nonlinear Functions 575
 - 14.4.2 *Improper Normalization* 576
 - 14.4.3 *Avoid Hump-Shaped Functions* 577
 - Challenge:** Formulating the Error Rate 583
 - Challenge:** Testing the Full Model 585
- 14.5 Eliciting Model Relationships Interactively 585
 - 14.5.1 *Case Study: Estimating Precedence Relationships in Product Development* 587
- 14.6 Summary 595
- 15 Modeling Human Behavior: Bounded Rationality or Rational Expectations? 597**
 - 15.1 Human Decision Making: Bounded Rationality or Rational Expectations? 598
 - 15.2 Cognitive Limitations 599
 - 15.3 Individual and Organizational Responses to Bounded Rationality 601
 - 15.3.1 *Habit, Routines, and Rules of Thumb* 601
 - 15.3.2 *Managing Attention* 601
 - 15.3.3 *Goal Formation and Satisficing* 601
 - 15.3.4 *Problem Decomposition and Decentralized Decision Making* 602
 - 15.4 Intended Rationality 603
 - 15.4.1 *Testing for Intended Rationality: Partial Model Tests* 605
 - 15.5 Case Study: Modeling High-Tech Growth Firms 605
 - 15.5.1 *Model Structure: Overview* 606
 - 15.5.2 *Order Fulfillment* 607
 - 15.5.3 *Capacity Acquisition* 609
 - Challenge:** Hill Climbing 615
 - 15.5.4 *The Sales Force* 615
 - 15.5.5 *The Market* 619
 - 15.5.6 *Behavior of the Full System* 621
 - Challenge:** Policy Design in the Market Growth Model 624
 - 15.6 Summary 629

16	Forecasts and Fudge Factors: Modeling Expectation Formation	631
16.1	Modeling Expectation Formation	631
16.1.1	<i>Modeling Growth Expectations: The TREND Function</i>	634
16.1.2	<i>Behavior of the TREND Function</i>	638
16.2	Case Study: Energy Consumption	638
16.3	Case Study: Commodity Prices	643
16.4	Case Study: Inflation	645
16.5	Implications for Forecast Consumers	655
	Challenge: Extrapolation and Stability	656
16.6	Initialization and Steady State Response of the TREND Function	658
16.7	Summary	660
PART V	INSTABILITY AND OSCILLATION	661
17	Supply Chains and the Origin of Oscillations	663
17.1	Supply Chains in Business and Beyond	664
17.1.1	<i>Oscillation, Amplification, and Phase Lag</i>	664
17.2	The Stock Management Problem	666
17.2.1	<i>Managing a Stock: Structure</i>	668
17.2.2	<i>Steady State Error</i>	671
17.2.3	<i>Managing a Stock: Behavior</i>	672
	Challenge: Exploring Amplification	674
17.3	The Stock Management Structure	675
17.3.1	<i>Behavior of the Stock Management Structure</i>	680
	Challenge: Exploring the Stock Management Structure	683
17.4	The Origin of Oscillations	684
17.4.1	<i>Mismanaging the Supply Line: The Beer Distribution Game</i>	684
17.4.2	<i>Why Do We Ignore the Supply Line?</i>	695
17.4.3	<i>Case Study: Boom and Bust in Real Estate Markets</i>	698
	Challenge: Expanding the Real Estate Model	707
17.5	Summary	707
18	The Manufacturing Supply Chain	709
18.1	The Policy Structure of Inventory and Production	710
18.1.1	<i>Order Fulfillment</i>	711
18.1.2	<i>Production</i>	713
18.1.3	<i>Production Starts</i>	714
18.1.4	<i>Demand Forecasting</i>	716
18.1.5	<i>Process Point: Initializing a Model in Equilibrium</i>	716
	Challenge: Simultaneous Initial Conditions	718
18.1.6	<i>Behavior of the Production Model</i>	720
18.1.7	<i>Enriching the Model: Adding Order Backlogs</i>	723
18.1.8	<i>Behavior of the Firm with Order Backlogs</i>	725
18.1.9	<i>Adding Raw Materials Inventory</i>	725
18.2	Interactions among Supply Chain Partners	729
18.2.1	<i>Instability and Trust in Supply Chains</i>	735

	18.2.2	<i>From Functional Silos to Integrated Supply Chain Management</i>	740
		Challenge: Reengineering the Supply Chain	741
18.3		System Dynamics in Action: Reengineering the Supply Chain in a High-Velocity Industry	743
	18.3.1	<i>Initial Problem Definition</i>	743
	18.3.2	<i>Reference Mode and Dynamic Hypothesis</i>	746
	18.3.3	<i>Model Formulation</i>	749
	18.3.4	<i>Testing the Model</i>	749
	18.3.5	<i>Policy Analysis</i>	751
	18.3.6	<i>Implementation: Sequential Debottlenecking</i>	753
	18.3.7	<i>Results</i>	755
18.4		Summary	755
19		The Labor Supply Chain and the Origin of Business Cycles	757
19.1		The Labor Supply Chain	758
	19.1.1	<i>Structure of Labor and Hiring</i>	758
	19.1.2	<i>Behavior of the Labor Supply Chain</i>	760
19.2		Interactions of Labor and Inventory Management	764
		Challenge: Mental Simulation of Inventory Management with Labor	766
	19.2.1	<i>Inventory–Workforce Interactions: Behavior</i>	766
	19.2.2	<i>Process Point: Explaining Model Behavior</i>	767
		Challenge: Explaining Oscillations	767
	19.2.3	<i>Understanding the Sources of Oscillation</i>	771
		Challenge: Policy Design to Enhance Stability	773
	19.2.4	<i>Adding Overtime</i>	774
	19.2.5	<i>Response to Flexible Workweeks</i>	776
		Challenge: Reengineering a Manufacturing Firm for Enhanced Stability	778
	19.2.6	<i>The Costs of Instability</i>	779
		Challenge: The Costs of Instability	780
		Challenge: Adding Training and Experience	780
19.3		Inventory–Workforce Interactions and the Business Cycle	782
	19.3.1	<i>Is the Business Cycle Dead?</i>	785
19.4		Summary	788
20		The Invisible Hand Sometimes Shakes: Commodity Cycles	791
20.1		Commodity Cycles: From Aircraft to Zinc	792
20.2		A Generic Commodity Market Model	798
	20.2.1	<i>Production and Inventory</i>	801
	20.2.2	<i>Capacity Utilization</i>	802
	20.2.3	<i>Production Capacity</i>	805
	20.2.4	<i>Desired Capacity</i>	807
		Challenge: Intended Rationality of the Investment Process	810
	20.2.5	<i>Demand</i>	811
	20.2.6	<i>The Price-Setting Process</i>	813
20.3		Application: Cycles in the Pulp and Paper Industry	824
		Challenge: Sensitivity to Uncertainty in Parameters	828

	Challenge: Sensitivity to Structural Changes	831
	Challenge: Implementing Structural Changes—	
	Modeling Livestock Markets	836
	Challenge: Policy Analysis	840
20.4	Summary	841
PART VI MODEL TESTING 843		
21	Truth and Beauty: Validation and Model Testing	845
21.1	Validation and Verification Are Impossible	846
21.2	Questions Model Users Should Ask—But Usually Don't	851
21.3	Pragmatics and Politics of Model Use	851
	21.3.1 <i>Types of Data</i>	853
	21.3.2 <i>Documentation</i>	855
	21.3.3 <i>Replicability</i>	855
	21.3.4 <i>Protective versus Reflective Modeling</i>	858
21.4	Model Testing in Practice	858
	21.4.1 <i>Boundary Adequacy Tests</i>	861
	21.4.2 <i>Structure Assessment Tests</i>	863
	21.4.3 <i>Dimensional Consistency</i>	866
	21.4.4 <i>Parameter Assessment</i>	866
	21.4.5 <i>Extreme Condition Tests</i>	869
	Challenge: Extreme Condition Tests	871
	21.4.6 <i>Integration Error Tests</i>	872
	21.4.7 <i>Behavior Reproduction Tests</i>	874
	21.4.8 <i>Behavior Anomaly Tests</i>	880
	21.4.9 <i>Family Member Tests</i>	881
	21.4.10 <i>Surprise Behavior Tests</i>	882
	21.4.11 <i>Sensitivity Analysis</i>	883
	21.4.12 <i>System Improvement Tests</i>	887
	Challenge: Model Testing	889
21.5	Summary	890
PART VII COMMENCEMENT 893		
22	Challenges for the Future	895
22.1	Theory	895
22.2	Technology	896
22.3	Implementation	899
22.4	Education	900
22.5	Applications	901
	Challenge: Putting System Dynamics into Action	901
APPENDIX A NUMERICAL INTEGRATION 903		
	Challenge: Choosing a Time Step	910
APPENDIX B NOISE 913		
	Challenge: Exploring Noise	922
REFERENCES 925		
INDEX 947		

List of Challenges

Dynamics of Multiple-Loop Systems	14
Hypothesis Testing	30
Identifying Feedback Structure from System Behavior	117
Identifying the Limits to Growth	122
Assigning Link Polarities	143
Identifying Link and Loop Polarity	145
Employee Motivation	147
Process Improvement	158
Policy Analysis with Causal Diagrams	168
The Oil Crises of the 1970s	172
Speculative Bubbles	173
The Thoroughbred Horse Market	174
The Medigap Death Spiral	176
Identifying the Feedback Structure of Policy Resistance	190
Identifying Stocks and Flows	201
Adding Stock and Flow Structure to Causal Diagrams	211
Linking Stock and Flow Structure with Feedback	212
Modifying Stock and Flow Maps	213
Disaggregation	214
Graphical Integration	239
Graphical Differentiation	241
Paper Folding	268
Goal-Seeking Behavior	281
Nonlinear Birth and Death Rates	286
Exploring the SIR Model	308
The Efficacy of Immunization Programs	310
Extending the SIR Model	316
Modeling HIV/AIDS	321
Phase Space of the Bass Diffusion Model	333
Critiquing the Bass Diffusion Model	334
Extending the Bass Model	335
Modeling Fads	341

Modeling the Life Cycle of Durable Products	345
Identifying Path Dependence	353
Formulating a Dynamic Hypothesis for the VCR Industry	364
Policy Analysis	403
Extending the Model	404
Duration and Dynamics of Delays	409
Response of Material Delays to Steps, Ramps, and Cycles	425
Response of Delays to Changing Delay Times	435
The Interactions of Training Delays and Growth	495
Coflows	503
The Dynamics of Experience and Learning	508
Modeling Design Wins in the Semiconductor Industry	511
Finding Formulation Flaws	520
Multiple Nonlinear Effects	529
Floating Goals	533
Goal Formation with Internal and External Inputs	535
Finding the Optimal Mix of Capital and Labor	543
Preventing Negative Stocks	547
Formulating Nonlinear Functions	566
Refining Table Functions with Qualitative Data	569
Critiquing Nonlinear Functions	575
Formulating the Error Rate	583
Testing the Full Model	585
Hill Climbing	615
Policy Design in the Market Growth Model	624
Extrapolation and Stability	656
Exploring Amplification	674
Exploring the Stock Management Structure	683
Expanding the Real Estate Model	707
Simultaneous Initial Conditions	718
Reengineering the Supply Chain	741
Mental Simulation of Inventory Management with Labor	766
Explaining Oscillations	767
Policy Design to Enhance Stability	773
Reengineering a Manufacturing Firm for Enhanced Stability	778
The Costs of Instability	780
Adding Training and Experience	780
Intended Rationality of the Investment Process	810
Sensitivity to Uncertainty in Parameters	828
Sensitivity to Structural Changes	831
Implementing Structural Changes—Modeling Livestock Markets	836
Policy Analysis	840
Extreme Condition Tests	871
Model Testing	889
Putting System Dynamics Into Action	901
Choosing a Time Step	910
Exploring Noise	922
