

CONTENTS

Series Editor's Introduction	vii
Acknowledgments	ix
1. Introduction	1
2. Data Gathering	2
The Research Question	3
The Sample	3
The Measures	4
Data Coding, Entry, and Checking	7
3. Univariate Statistics	8
Central Tendency	8
Dispersion	11
Central Tendency, Dispersion, and Outliers	16
4. Measures of Association	19
Correlation	19
Ordinal Data: The Tau Measure of Association	22
Nominal Data: Goodman and Kruskals' Lambda	26
Dichotomous Variables: Flexibility of Choice	28
Summary and Conclusion	29
5. Significance Testing	30
The Logic: A Simple Example	31
Applying the Logic: Bivariate Measures of Association	35
Critical Issues	38
Summary and Conclusion	40
6. Simple Regression	41
Y as a Function of X	41
The Least Squares Principle	43
Intercept and Slope	45
Prediction and Goodness-of-Fit	47

Significance Tests and Confidence Intervals	49
Presenting Regression Results: A Summary Guide	53

7. Multiple Regression	53
An Example	54
The Notion of Statistical Control	55
Specification Error	57
Dummy Variables	60
Collinearity	62
Interaction Effects	65
Nonlinearity	67
Summary and Conclusion	71
8. Recommendations	72
9. Appendix: The Regression Assumptions	72
References	75
