

# CONTENTS

Introduction to the Series	v
----------------------------	---

## *Chapter 1*

Introduction	
DAVID A. HENSHER and KENNETH J. BUTTON	1
1. Introduction	1
2. Transport modelling	2
3. What is a good model?	3
4. Where is transport modelling moving?	5
5. The changing policy agenda	7
6. The Handbook	9

## *Chapter 2*

History of Demand Modelling	
JOHN BATES	11
1. Introduction	11
2. Supply and demand	12
3. Aspects of demand	14
4. The four-stage model	17
4.1. Assignment	18
4.2. Concluding remarks	20
5. Models of trip production	20
5.1. Car ownership	23
5.2. Models of trip attraction	25
6. Models of distribution or destination choice	26
6.1. Forecasting the future distribution	29
7. Models of mode choice	29
8. Overall model structure	31
References	32

## *Chapter 3*

The Four-step Model	
MICHAEL G. McNALLY	35
1. Introduction	35
2. Transportation systems analysis	36

<b>3. Problems, study areas, models, and data</b>	<b>37</b>
3.1. Study area definition	38
3.2. Models	38
3.3. Data	40
3.4. A sample problem	41
<b>4. Trip generation</b>	<b>42</b>
4.1. Process	42
4.2. A sample household-trip-production model	44
4.3. A sample zonal-attraction model	45
4.4. Application to the base population	45
4.5. Time of day	45
<b>5. Trip distribution</b>	<b>46</b>
5.1. Process	46
5.2. Travel impedance and skim trees	47
5.3. A sample gravity model	47
5.4. Adjustments	48
<b>6. Mode choice</b>	<b>48</b>
<b>7. Route choice</b>	<b>49</b>
7.1. Process	50
7.2. A sample assignment of vehicle trip tables to the highway network	50
<b>8. Summary</b>	<b>51</b>
<b>References</b>	<b>52</b>

#### *Chapter 4*

<b>The Activity-based Approach</b>	
<b>MICHAEL G. McNALLY</b>	<b>53</b>
<b>1. Introduction</b>	<b>53</b>
<b>2. The trip-based approach</b>	<b>54</b>
2.1. The four-step model	54
2.2. Limitations	55
<b>3. The activity-based approach</b>	<b>56</b>
3.1. Characteristics of the activity-based approach	58
3.2. Theory and conceptual frameworks	59
<b>4. Data</b>	<b>60</b>
<b>5. Applications of activity-based approaches</b>	<b>61</b>
5.1. Simulation-based applications	61
5.2. Econometric-based applications	63
5.3. Other applications	64
<b>6. Summary and future directions</b>	<b>65</b>
6.1. Current modeling needs	65
6.2. Data needs	66

6.3. Policy applications	66
6.4. Where we are and where we are going	67
References	68

### Chapter 5

#### Flexible Model Structures for Discrete Choice Analysis

CHANDRA R. BHAT	71
1. Introduction	71
2. Heteroscedastic models	73
2.1. Model formulations	73
2.2. HEV model structure	74
2.3. HEV model estimation	76
2.4. Transport applications	77
3. Flexible structure models	78
3.1. Model formulations	79
3.2. MMNL structure	81
3.3. MMNL estimation methodology	83
3.4. Transport applications	87
4. Conclusions	88
References	89

### Chapter 6

#### Duration Modeling

CHANDRA R. BHAT	91
1. Introduction	91
2. The hazard function and its distribution	94
2.1. Parametric hazard	95
2.2. Nonparametric hazard	96
3. Effect of external covariates	97
3.1. The proportional hazard form	97
3.2. The accelerated lifetime form	99
3.3. General form	100
4. Unobserved heterogeneity	100
5. Model estimation	101
5.1. Parametric hazard distribution	101
5.2. Nonparametric hazard distribution	102
6. Miscellaneous other topics	106
6.1. Left censoring	106
6.2. Time-varying covariates	106
6.3. Multiple spells	106
6.4. Multiple-duration processes	107

6.5. Simultaneous-duration processes	108
7. Conclusions and transport applications	108
References	110

### Chapter 7

Longitudinal Methods	
RYUICHI KITAMURA	113
1. Introduction	113
2. Panel surveys as a means of collecting longitudinal data	113
3. Cross-sectional vs. longitudinal analyses	114
4. Travel behavior dynamics	116
5. Stochastic processes	118
5.1. Renewal processes	118
5.2. Markov renewal processes	119
5.3. Markov processes	119
5.4. Markov chains	120
6. Discrete time panel data and analyses	121
6.1. Linear models	122
6.2. Distributed-lag models	123
6.3. Lagged dependent variables	123
6.4. Non-linear models	125
6.5. Dynamic models	125
6.6. Initial conditions	126
6.7. State dependence vs. heterogeneity	126
7. Issues in panel survey design	127
8. Conclusion	128
References	128

### Chapter 8

Stated-preference Methods	
JORDAN LOUVIERE and DEBORAH STREET	131
1. Introduction	131
2. Random utility based SP methods	132
3. Choice experiment designs consistent with RUT	136
4. Statistical properties of choice experiments	137
4.1. Paired comparisons	137
4.2. Multiple comparisons (choices)	138
References	142

### Chapter 9

Towards a Land-use and Transport Interaction Framework	
FRANCISCO J. MARTÍNEZ	145

1. Introduction	145
2. Model structure	147
3. The land-use model	149
3.1. The bid-choice location framework	150
3.2. The stochastic location model	153
3.3. The land-use model	154
4. Measuring access	155
4.1. Application example	157
5. Transport impacts on land use	160
6. Lessons for economic appraisal	161
7. Concluding remarks	162
References	163

### Chapter 10

#### Travel Networks

LUIS G. WILLUMSEN

165

1. Introduction	165
1.1. Flows and capacity	167
2. Notation	168
3. Assignment methods	169
3.1. Route choice	170
3.2. Steps in traffic assignment	171
3.3. Tree building	171
3.4. All-or-nothing assignment	173
3.5. Stochastic methods	173
3.6. Simulation-based methods	173
4. Congested assignment	174
4.1. Wardrop's equilibrium	174
4.2. A mathematical programming approach	176
4.3. Solution methods	177
5. Limitations of classic methods	178
6. Generalized networks	179
6.1. Common passenger services	179
6.2. Freight	180
References	180

### Chapter 11

#### Analytical Dynamic Traffic Assignment Models

TERRY L. FRIESZ and DAVID BERNSTEIN

181

1. Introduction	181
2. What is dynamic traffic assignment?	182

3. Dynamic network loading and dynamic traffic assignment	183
3.1. Notation	183
4. Dynamics based on arc exit-flow functions	183
5. Dynamics with controlled entrance and exit flows	185
6. Cell transmission dynamics	187
7. Dynamics based on arc exit-time functions	188
8. Dynamic user equilibrium	191
9. Tatonnement and projective dynamics	193
References	194

### Chapter 12

Transport Demand Elasticities TAE HOON OUM and W. G. WATERS II	197
1. Concepts and interpretation of demand elasticities	197
1.1. Ordinary and compensated elasticities	197
1.2. Other elasticity concepts	198
1.3. Mode-choice elasticities	201
1.4. Disaggregate discrete-choice models	202
1.5. Linkages between concepts of elasticities	203
2. Estimates of price elasticities	204
3. Some guidelines and pitfalls in estimating transport demand elasticities	206
3.1. The importance of market-specific demand studies	206
3.2. Types of transport demand elasticity studies	206
3.3. Specification of demand functions	207
3.4. Interpretation of elasticities	208
4. Concluding remarks	209
References	209

### Chapter 13

Closed-form Discrete-choice Models FRANK S. KOPPELMAN and VANEET SETHI	211
1. Introduction	211
2. Multinomial logit model	212
2.1. Independence of errors across alternatives	213
2.2. Equality of error variance across cases	213
3. Relaxation of the independence of errors across alternatives	214
3.1. The nested logit model	214
3.2. Generalized extreme value models	216
3.3. Universal (mother) logit models	221
3.4. Overview of models that relax the independence of errors over alternatives	222

4. Relaxation of the equality of errors over cases	223
5. Future developments in closed-form choice models	224
References	225

*Chapter 14***Survey and sampling strategies**

Peter R. Stopher	229
1. Introduction	229
2. Survey methods	231
2.1. Household travel surveys	232
2.2. Other non-household-based surveys	235
3. Sampling strategies	239
3.1. Sampling frames	240
3.2. Error and bias	240
3.3. Sampling methods	241
4. The future	249
References	250

*Chapter 15***Geographical Information Systems for Transport**

KENNETH J. DUEKER and TU TON	253
1. Introduction	253
2. GIS basics	254
2.1. Definition of GIS	254
2.2. Four key functions of GIS	255
2.3. Special requirements of GIS for transport applications	257
3. A framework for GIS-T	258
4. Two illustrative examples of GIS-T	261
4.1. Evolution of GIS to support comprehensive urban land use and transportation planning	261
4.2. The development of digital road map databases for vehicle navigation	265
5. Conclusion	268
References	268

*Chapter 16***Definition of Movement and Activity for Transport Modeling**

KLAUS W. AXHAUSEN	271
1. Introduction	271
2. Types of data	272
3. Defining movement and activity	273
4. Typical items and problems of aggregation	276

5. Defining the survey object	279
6. Translating the definitions into surveys	281
7. Freight and commercial traffic	282
8. Summary	283
References	283

### Chapter 17

<b>Environmental Valuation</b> RHONDA DANIELS and VIC ADAMOWICZ	285
1. Introduction	285
1.1. Values	286
1.2. Range of environmental impacts of transport	286
1.3. Modeling environmental values: the linkage to biophysical models	288
1.4. Models: transport and environmental links	290
2. Modeling approaches	290
2.1. Weak behavioral linkage methods	290
2.2. Revealed-preference approaches	291
2.3. Stated-preference approaches	292
2.4. Combining data sources	294
3. Case study: recreation site choice model	295
4. Valuation issues and future developments	297
4.1. Valuation issues	297
4.2. Future developments	299
5. Summary	300
References	301

### Chapter 18

<b>Allocation and Valuation of Travel-time Savings</b> SERGIO R. JARA-DÍAZ	303
1. Introduction	303
2. Time allocation theory and the subjective value of time	304
3. Discrete travel choice and the value of time	309
4. Towards social values	312
5. Synthesis and conclusion	314
Appendix	316
References	318

### Chapter 19

<b>Cost Functions in Transport</b> ERIC PELS and PIET RIETVELD	321
1. Introduction	321
2. Estimation of cost functions	324

2.1. Accounting cost functions	324
2.2. Statistical estimation of cost functions	325
2.3. Returns to scale	328
2.4. Productivity and technological change	329
2.5. Extensions	329
3. Applications	330
4. Conclusion	332
References	333
 <i>Chapter 20</i>	
<b>Productivity Measurement</b>	
<b>W.G. WATERS II</b>	<b>335</b>
1. Introduction	335
2. Concepts of productivity gains	336
3. Index number procedures for productivity measurement	337
3.1. Partial factor productivity and performance ratios	338
3.2. Total factor productivity	338
3.3. Decomposition of TFP into sources	344
4. Conventional econometric methods	345
5. Concluding remarks	348
References	350
 <i>Chapter 21</i>	
<b>Congestion Modeling</b>	
<b>ROBIN LINDSEY and ERIK VERHOEF</b>	<b>353</b>
1. Introduction	353
2. Time-independent models	354
3. Time-dependent models	358
4. Modeling congestion on a network	366
5. Road pricing and investment	368
6. Conclusions	371
References	372
 <i>Chapter 22</i>	
<b>Modeling Signalized and Unsignalized Junctions</b>	
<b>ROD TROUTBECK</b>	<b>375</b>
1. Introduction	375
2. Definition of capacity and delay	375
3. Unsignalized junctions	376
3.1. Stream rankings	376
3.2. Availability of opportunities	376
3.3. The order of opportunities	377

3.4. The usefulness of opportunities to the entering drivers	378
3.5. The relative priority of traffic at the junction	379
3.6. The capacity of simple merges with absolute priority	379
3.7. The capacity of a limited priority merge and a roundabout entry	380
3.8. The estimation of delays at simple merges with absolute priority	381
3.9. Estimation of delay using M/M/1 queuing theory	382
3.10. Delays under oversaturated conditions	383
3.11. Queue lengths at simple merges	384
3.12. Analysis of junctions with a number of streams	385
3.13. Queuing across a median	386
4. Signalized junctions	386
4.1. Effective red and green periods	386
4.2. The definition of delays at a signalized junction	387
4.3. Delay models for undersaturated conditions	388
4.4. Time-dependent delay estimates	389
4.5. Modeling of turns through oncoming traffic at signalized junctions	390
References	390

### Chapter 23

#### Trip Timing

HANI S. MAHMASSANI	393
1. Introduction	393
2. Trip timing for the work commute under equilibrium conditions	395
3. Prediction of within-day equilibrium departure patterns	397
4. Day-to-day dynamics	398
4.1. Daily variability of trip-timing decisions of commuters in actual systems	399
4.2. Behavioral mechanisms and decision-process models	401
4.3. Day-to-day forecasting frameworks	403
5. Concluding comments	404
References	405

### Chapter 24

#### Modeling Parking

WILLIAM YOUNG	409
1. Introduction	409
2. Hierarchy of models	409
3. Model types	412
3.1. Parking-design models	412
3.2. Parking-allocation models	414

3.3. Parking-search models	416
3.4. Parking-choice models	417
3.5. Parking interaction models	419
4. Conclusions	419
References	420

### Chapter 25

#### National Models

ANDREW DALY	421
1. Introduction	421
2. European national models 1975–1995	423
2.1. The regional highways traffic model, England	423
2.2. The Netherlands national model	424
2.3. Norwegian national model	426
2.4. Italian national model	427
2.5. Danish and Swedish national models	428
2.6. Other European national models	429
2.7. Proposed model of Great Britain	429
3. Model design: Similarities and differences	430
4. Discussion and conclusions	431
References	432

### Chapter 26

#### An Introduction to the Valuation of Travel-time Savings and Losses

HUGH F. GUNN	433
1. Introduction	433
2. Conceptual models of time–cost trading	434
2.1. A simple behavioral model	434
2.2. More elaborate models of rational behavior	435
3. Experimental data: Situations and evidence of preference	437
3.1. Situations	438
3.2. Indications of relative attractiveness	439
4. The history of VTTS measurement	439
4.1. A pencil-and-paper approach	440
4.2. Probabilistic choice models	442
4.3. Regression approaches with transfer-price data	442
5. Current findings	443
5.1. Personal travel	443
5.2. Business travel and freight	444
6. Recent results and conclusions	445
References	447

*Chapter 27***Can Telecommunications Help Solve Transportation Problems?**

ILAN SALOMON

1. Introduction	449
1.1. Background	450
1.2. ICT applications	451
2. Do ICT affect the demand for travel? The main issues	454
2.1. A typology of interactions	455
2.2. Uncertainty about technology and behavior	456
2.3. The time factor	456
2.4. Do we need a new research paradigm?	457
3. Research approaches (and some pitfalls)	457
4. Conclusions and policy implications	461
References	461

*Chapter 28***Automobile Demand and Type Choice**

DAVID S. BUNCH

1. Introduction	463
2. Determinants of automobile demand	464
3. Auto-ownership models	466
4. Vehicle-purchase models	468
4.1. Three MNL new car purchase models	469
4.2. Nested MNLs of vehicle purchase	471
4.3. Mixed MNL and revealed preference/stated preference joint estimation	471
5. Vehicle-holdings and usage models	472
5.1. Discrete-continuous NMNLs	473
5.2. Examples from the literature	475
6. Vehicle-transaction models	476
7. Conclusions	477
References	478

*Chapter 29***Information Systems and Other Intelligent Transport System Innovations**

PETER BONSALE

1. Introduction	481
1.1. Dimensions of response	482
2. The impact of ITS on travellers' knowledge of the transport system	483
2.1. Modelling the absence of information	483

2.2. Modelling the acquisition of information	486
2.3. To equilibrate or not to equilibrate?	490
2.4. Credibility and compliance	491
3. Sources of data for modelling the impacts of ITS	492
References	494

### Chapter 30

#### Transit-assignment Models

JOAQUIN DE CEA and ENRIQUE FERNANDEZ

497

1. Introduction	497
2. Some basic concepts	499
3. Formulations for the transit-assignment problem	502
3.1. Transit-assignment models without congestion	502
3.2. Transit-assignment models with congestion	504
4. Final comments	506
References	507

### Chapter 31

#### Models for Public Transport Demand and Benefit Assessments

KJELL JANSSON and REZA MORTAZAVI

509

1. Introduction	509
2. A general framework on choice of mode and benefit estimation	510
3. Basic characteristics of elasticity models	512
4. Basic characteristics of assignment models	513
4.1. Introduction	513
4.2. The RDT model	514
5. Basic characteristics of the multinomial logit model	515
6. tasks and problems of the models	517
7. Comparisons between models by use of examples	518
7.1. Assumptions	518
7.2. Example 1	519
7.3. Example 2	522
7.4. Conclusions of comparisons	524
8. Conclusions	524
References	525

### Chapter 32

#### Strategic Freight Network Planning Models

TERRY L. FRIESZ

527

1. Introduction	527
2. Background	528
3. The key commercial models	529

4. Typology of models	530
5. Shipper-carrier simultaneity	533
6. Integrating CGE and network models	534
7. Non-monotonic models	534
8. Back-hauling and fleet constraints	535
9. Imperfect competition	535
10. Dynamic extensions	536
11. Validation	536
References	536

### Chapter 33

#### Urban Freight Movement Modeling

GLEN D'ESTE	539
1. Introduction	539
2. The nature of urban freight	540
2.1. Partitioning the urban freight market	541
2.2. Measuring urban freight movements	544
3. Modeling framework	545
4. Steps in the modeling process	546
4.1. Partitioning	546
4.2. Zoning system	546
4.3. Networks	547
4.4. Trip generation	547
4.5. Trip distribution	548
4.6. Mode split	549
4.7. Trip assignment	549
5. Other modeling issues	550
5.1. Data availability	550
5.2. Temporal variation	550
5.3. Transient attractors	551
5.4. Pace of change	552
6. Concluding remarks	552
References	552

### Chapter 34

#### Value of Freight Travel-time Savings

GERARD DE JONG	553
1. Introduction	553
2. Classification of methods used in freight VTTS research	554
3. Summary of outcomes for road transport	557
4. Summary of outcomes for rail or combined transport	558
5. Summary of outcomes for inland waterways transport	559

6. Worked example: The 1994/1995 U.K. Freight VTTS Study	560
6.1. Recruitment and segmentation	560
6.2. Contents of the experiments	560
6.3. Model	561
7. Value of freight travel-time savings in the long run	562
8. Conclusion	563
References	563

*Chapter 35***Modelling Performance: Rail**

CHRIS NASH	565
1. Introduction	565
2. Characteristics of railways	566
2.1. Multiplicity of outputs	566
2.2. Complexity of the production process	567
2.3. Operating environment and government intervention	568
3. Partial productivity measures	569
4. Total factor productivity	570
5. Explaining the performance of individual railways	572
6. Conclusions	574
References	574

*Chapter 36***The Performance of Bus-transit Operators**

BRUNO DE BORGER and KRISTIAAN KERSTENS	577
1. Introduction	577
2. Performance measurement in bus transit	578
2.1. Performance concepts: Productivity, efficiency, and effectiveness	578
2.2. Specification of inputs and outputs for performance measurement in the bus industry	580
3. Performance of bus operators	583
3.1. Bus technology and performance: Some facts	583
3.2. Determinants of bus transit productivity and efficiency	586
4. Conclusion	593
References	594

*Chapter 37***Models of Airport Performance**

PETER FORSYTH	597
1. Introduction	597
2. Modeling demand, congestion cost, and pricing	597
2.1. Congestion models	598

2.2. Congestion-cost models	598
2.3. Congestion pricing models	599
3. Models of cost and efficiency	601
3.1. Problems in modeling performance	602
3.2. Benchmarking studies	604
3.3. Total factor productivity measures	605
3.4. Data envelopment analysis	606
3.5. Stochastic frontier analysis	607
References	607

*Chapter 38*

### Modeling Performance: Measuring and Comparing Unit Cost Competitiveness of Airlines

TAE HOON OUM, CHUNYAN YU and MICHAEL Z.F. LI

1. Introduction	609
2. Methodologies	610
2.1. Total factor productivity	610
2.2. Unit cost analysis	610
3. A case study	613
3.1. Outputs	613
3.2. Inputs	613
3.3. Unit cost	614
3.4. Characteristics of the sample airlines	614
4. Empirical results and discussion	615
5. Summary and concluding remarks	621
References	622

*Chapter 39*

### Highway Performance

PAUL ROUSE and MARTIN PUTTERILL

1. Introduction	625
2. Competitive market cost-management framework for highways	627
3. A general managerial performance framework	629
4. Advances in methods of analysis	632
5. Case 1 summary: Scale and efficiency effects from amalgamation	634
6. Case 2 summary: Environmental factors as cost drivers	637
7. Communicating service performance	640
References	641

*Chapter 40*

### Modeling Performance in Liner Shipping

H.E. HARALAMBIDES and A.W. VEENSTRA

1. Introduction	643
2. Optimization of liner shipping operations	645
3. Market-structure modeling	647
4. New theoretical perspectives on liner shipping	650
4.1. The theory of contestability	651
4.2. The theory of the core	652
5. Concluding remarks	653
References	655
Author Index	657
Subject Index	663
