## Contents

Foreword by Alan Powell  xi

Preface  xiii

1 The Closed Economy: The Frisch or Keynes Paradigm?  1
   1.1 Introduction ....................................................... 1
   1.2 Neoclassical macrodynamics: Supply-side inflation inertia and self-correcting unemployment dynamics ................................................. 3
   1.3 Keynesian macrodynamics: Textbook stagflation theory and beyond ........ 12
      1.3.1 Introduction ....................................................... 12
      1.3.2 Medium-run IS-LM analysis? ...................................... 14
      1.3.3 IS-LM-PC analysis proper ........................................... 16
      1.3.4 Local stability properties .......................................... 17
      1.3.5 Global analysis I: Floors and ceilings? ............................... 19
      1.3.6 Global analysis II: A kinked money wage Phillips curve .......... 21
   1.4 Conclusions and outlook ............................................. 25
   1.5 Reading list ........................................................ 27
   1.6 Appendix: Keynes’ notes on the trade cycle .......................... 28

I Open Economy Macrodynamics in Historical Perspective  33

2 Classical Two-Country Dynamics: Pure Price Adjustments?  39
   2.1 Trade under the gold standard ........................................ 39
   2.2 Trade, specie flows and purchasing power parity ...................... 40
   2.3 A one-good monetary model of international commodity trade ........ 43
   2.4 The monetary adjustment process ..................................... 47
   2.5 Currency devaluation: Short-, medium- and long-run effects .......... 52
   2.6 The two-commodity extension ......................................... 57
2.7 The pure monetary model: Basic and advanced formulations

2.8 Unemployment in the Classical trade model

2.9 Conclusions

2.10 Reading list

2.11 Notation

2.12 Appendix: The Classical version of the Keynesian income-expenditure model

3 Keynesian Two-Country Dynamics: Pure Quantity Adjustments

3.1 Bretton Woods, Phase I: The renewed evolution of international trade

3.2 The Keynesian approach to international trade

3.3 The two-country dynamic multiplier model

3.4 Currency devaluation in the multiplier model

3.5 Metzlerian inventory dynamics in the symmetric two-country case

3.6 Conclusions

3.7 Reading list

3.8 Notation

3.9 Appendix: The Keynesian version of the income-expenditure model

4 Output, Interest and Changing Exchange Rate Regimes

4.1 Bretton Woods Phase II: Trade and increasing capital mobility

4.2 The textbook Mundell-Fleming model

4.3 Monetary policy

4.4 Fiscal policy

4.5 Two-country Mundell-Fleming models: Basic aspects and extensions

4.6 Conclusions

4.7 Reading list

4.8 Notation

4.9 Appendix: The Mundell-Fleming-Tobin approach to small open economies

5 Exchange Rate Volatility

5.1 Capital mobility, flexible exchange rates and the role of expectations

5.2 Exchange rate dynamics in the IS-LM-PC model: Level-form analysis

5.2.1 The model and its stationary state

5.2.2 Comparative static analysis

5.2.3 Graphical representation and fundamental implications

5.3 Exchange rate dynamics in the IS-LM-PC model: Loglinear analysis
5.3.1 Loglinear representation and analysis ........................................... 182
5.3.2 Myopic perfect foresight and learning ....................................... 186
5.3.3 Imperfect capital mobility ............................................................. 189
5.4 Rational expectations IS-LM-PC dynamics ...................................... 192
  5.4.1 The case of the small open economy ........................................... 193
  5.4.2 A symmetric two-country analysis ............................................. 200
  5.4.3 A critique of the ‘rational expectations’ methodology ................. 212
5.5 Exchange rate dynamics in the Dornbusch model: The most basic case ... 218
5.6 Conclusions ..................................................................................... 230
5.7 Reading list ..................................................................................... 231
5.8 Notation .......................................................................................... 232
5.9 Appendix: A Keynes-Wicksell reformulation of exchange rate dynamics . 234

II  Keynes-Metzler-Goodwin Dynamics in Open Economies 245

6  KMG Model Building: The Baseline Case of a ‘Closed’ US-Economy 251
  6.1 Introduction .................................................................................... 251
  6.2 Reformulating Keynesian AS-AD Macrodynamics .......................... 254
    6.2.1 The 3D Rose type wage-price dynamics .................................... 254
    6.2.2 The 2D Metzlerian quantity dynamics and capital stock growth .... 257
    6.2.3 Putting things together: The KMG growth dynamics ................. 258
    6.2.4 Feedback-motivated stability analysis ....................................... 260
  6.3 Monetary Policy in KMG Growth Dynamics ................................... 265
    6.3.1 Introducing monetary policy rules ............................................. 266
    6.3.2 The dynamics with estimated parameters .................................. 268
    6.3.3 Kinked money wage Phillips Curves ......................................... 271
    6.3.4 The role of monetary policy rules reconsidered ........................... 274
  6.4 Conclusions .................................................................................... 278
  6.5 Appendices ...................................................................................... 278
    6.5.1 Appendix 1: The KMG dynamics in extensive form ................. 279
    6.5.2 Appendix 2: Detailed proof of theorem 6.1 ............................... 283

7  Large Open KMG Economies: Germany within the EMU 295
  7.1 Introduction .................................................................................... 295
  7.2 The model in extensive form ......................................................... 297
