Introduction	1
Chapter I An Introduction to Value-added Taxation	5
1. The Development of Value-added Taxation in the European Union	6
1.1. From the Beginnings to the White Book	6
1.1.1. The Development of Turnover Taxes in Europe	6
1.1.2. The Treaty of Rome	9
1.1.3. Creating a European Value-added Tax	11
1.2. The VAT Harmonization Debate Since 1985	14
1.2.1. The White Paper	14
1.2.2. The 1987/89 Harmonization Proposals	16
1.2.3. A Tough Compromise: The Transitional System	17
1.2.4. What Comes After 1996?	20
2. Principles of Value-added Taxation	21
2.1. Types of Value-added Taxes	22
2.2. The Rate Structure of a Value-added Tax	24
2.3. Calculating Tax Liabilities	26
2.3.1. The Credit or Invoice Method	26
2.3.2. The Addition and the Subtraction Method	28
2.4. International Taxation Principles for VAT	30
2.5. One Further Issue in Value-added Taxation: Exemption Versus Zero Rating	36
3. Questions and Answers: The Plan of the Book	37
3.1. The Questions	37

3.2. The Methodology : Computable General
Equilibrium Analysis 39

3.3. The Chapters to Come 40

3.4. Related Work 41

**Chapter II VAT Policy Options for an
Integrated Europe 45**

1. Some Basic Elements of our Model 46

2. The Destination Principle 50

 2.1. Some Institutional Features 50

 2.2. A Numerical Example 51

 2.3. A More General Formulation 52

3. The Transitional System 55

 3.1. Main Institutional Features 56

 3.1.1. Intra-community Supplies
 and Acquisitions 56

 3.1.2. Means of Transport 57

 3.1.3. Distance Sales 58

 3.2. A Numerical Example 61

 3.3. A More General Formulation 63

 3.3.1. The Switching Option 63

 3.3.2. The Mixed System 65

4. The Origin Principle and the Credit Method 65

 4.1. Some Institutional Features 65

 4.2. A Numerical Example 69

 4.3. A More General Formulation 73

 4.3.1. The Common Market Principle 73

 4.3.2. The Clearing System 75

5. The Origin Principle and the Subtraction Method 78

Chapter III Theoretical Foundations 81

1. The Command Optimum 82

2. Tax Distortions 85

 2.1. Tariffs, Income Taxes, and Production Taxes 85

2.2. Destination-based VAT	87
2.3. Origin-based VAT under the Credit Method	89
2.4. Origin-based VAT under the Subtraction Method	93
3. Trade Neutrality and the Exchange Rate Argument	95
3.1. Trade Neutrality	96
3.2. The Exchange Rate Argument	98
4. Welfare Effects of VAT in Open Economies	104
Chapter IV From Theory to Application: A Com- putable General Equilibrium Model	113
1. Operationalizing Walras with CGE Models	114
2. The Theoretical Model	117
2.1. The Production Sector	118
2.1.1. Value Added and Composite Inter- mediate Products	120
2.1.2. Primary Input Demand	120
2.1.3. Demand for Domestic and Imported Composite Inputs	121
2.1.4. Demand for Imported Inputs	123
2.1.5. Calculating Producer Prices Under the Tax Credit Method	123
2.2. The Household Sector	126
2.2.1. Calculating Price Indices	128
2.2.2. Demand for Leisure and Consumption	129
2.2.3. Demand for Different Consumption Commodities	130
2.2.4. Demand for Domestic and Imported Commodities	131
2.2.5. Demand for Different Imported Commodities	132
2.3. The Public Sector	133
2.3.1. Public Revenues	133
2.3.2. Public Expenditure	134
2.4. The Foreign Sector	135
2.4.1. Balance of Payments	135
2.4.2. Terms of Trade	136
2.5. Equilibrium Conditions of the Model	137

3. A Micro-consistent Data Set for the EU	140
3.1. Consistency Requirements and Data Sources	140
3.2. Data Adjustments	143
3.2.1. Updating the Intermediate Transaction and Final Demand Tables	143
3.2.2. Value Added by Industry	146
3.2.3. Government Revenues and Expenditures	147
3.3. Some Final Remarks	151
4. Model Calibration	151
4.1. Specification of Exogenous Parameter Values	152
4.2. Calibration	153
4.2.1. Calibration in the Production Sector	155
4.2.2. Calibration in the Household Sector	156
Chapter V Simulation Results and Economic Interpretations	161
1. Some Methodological Issues	162
1.1. Reliability of CGE Results	162
1.2. Measuring Welfare Changes from Tax Reforms	164
2. The Transitional System	166
2.1. The Switching Option	167
2.2. The Mixed System	172
3. The Origin Principle and the Credit Method	175
3.1. The Common Market Principle	175
3.2. The Clearing System	178
4. The Origin Principle and the Subtraction Method	184
4.1. Welfare and Revenue Effects	184
4.2. Equivalence of Statutory Tax Rates on Value Added and Effective Tax Rates on Consumption	186
4.3. Effective Consumption Tax Rates in General Equilibrium: An Example	191
4.4. Decomposing and Explaining Welfare Effects	196

5. Some Sensitivity Analysis200

 5.1. Varying Key Parameter Values202

 5.2. Varying the Data Set 207

Chapter VI Summary and Conclusions211

List of Abbreviations217

Glossary of Notation 219

**The Debate about Value-added Taxation in the
European Union: Timetable of Events since 1985225**
