List of tables	viii
List of figures	xi
Preface	xii
1: Flexibility: The key to economic regeneration?	1
Introduction	1
Industrial location	2
Theories of structural change in the economy	5
The growing importance of small firms in regional development	16
The peripherality of Northern Ireland within the United Kingdom	23
Conclusions	25
2: Vicious and virtuous circles of regional development - The case of Northern Ireland and Massachusetts	27
Introduction	27
Economic development in Northern Ireland	29
Economic development in Massachusetts	36
Economic measures of change in Northern Ireland and Massachusetts	43
Conclusions	60
3: Matched plant methodology	63
Introduction	63
The evolution of matched plant methods	64
The matched plant methodology in Northern Ireland and Massachusetts	68

Sampling techniques	71
Characteristics of the sample	74
Matched plant questionnaire	76
4: Comparative analysis of matched plant growth: Northern Ireland and Massachusetts	84
Introduction	84
Small firm growth	86
Growth within the matched plants - turnover and employment based measures	87
The relationship between turnover growth and employment growth	90
Output per employee growth 1988 to 1993	92
Operational mechanisms contributing to growth	93
Summary	109
5: Functional flexibility in the production process	113
Introduction	113
Functional flexibility	115
Employee characteristics	117
Summary	127
Functional flexibility on the shopfloor	127
Summary	132
Functional flexibility of supervisory workers	132
Functional flexibility of managers	147
6: Numerical flexibility in the production process	160
Numerical flexibility	160
Numerical flexibility within the matched plants	162
Labour flexibility: Conclusions	170
7: Flexibility in the production process	175
Introduction	175
Just-in-time and Just-in-case production	178
Summary	206
8: Conclusions	212
Flexibility - rhetoric or reality?	212
Flexibility and growth	213
Numerical flexibility and growth	215
Functional flexibility and growth	216
Flexibility in the production process and growth	221

Numerical, functional and production flexibility - Mutually exclusive concepts?	226
The evidence for flexible specialization and flexible accumulation	228
Evaluation	236
Appendix: Accumulation in the 20th Century	242
Bibliography	248

List of tables

Table 1.1	Fordist versus flexible regimes of accumulation	12
Table 2.1	Employment by industrial sector as proportion of total non-agricultural employment, Northern Ireland and Massachusetts 1973, 1985 and 1994	44
Table 2.2	The contribution of each manufacturing sector to total manufacturing employment in Northern Ireland, 1973 and 1994	48
Table 2.3	Employment change in industrial sectors as a proportion of total manufacturing employment 1973 to 1994, Northern Ireland	49
Table 2.4	The contribution of each manufacturing sector to total manufacturing employment in Massachusetts, 1973 and 1994	50
Table 2.5	Employment change in industrial sectors as a proportion of total manufacturing employment 1973 to 1994, Massachusetts	51
Table 2.6	Proportion of establishments and employment in small firms within Massachusetts, 1978 to 1995	59
Table 3.1	The employment distribution of the matched plants	75
Table 3.2	The age distribution of the matched plants	76

Table 4.1	Percentage change in real turnover and employment, by industrial sector and region	88
Table 4.2	The differential and correlation between the percentage change in turnover and employment growth by industrial group and region	91
Table 4.3	Growth in sales per employee from 1988 to 1993	93
Table 5.1	The distribution of qualifications amongst engineering employees	118
Table 5.2	The distribution of qualifications amongst food processing employees	119
Table 5.3	Average training expenditure per firm on employees by occupational group	124
Table 5.4	Average training expenditure per employee by occupational group and region	126
Table 5.5	Employee interaction	130
Table 5.6	The relative importance of supervisory skills	137
Table 5.7	The proportion of supervisory training which is on-the-job and off-the-job by sector	139
Table 5.8	The type of skills acquired through training	142
Table 5.9	The percentage of engineering supervisors capable of performing additional occupational tasks	144
Table 5.10	Percentage distribution of managerial qualifications	150
Table 5.11	Percentage distribution of skills acquired by managers	154
Table 6.1	The average hourly pay levels of employees (1993)	167
Table 6.2	Pay levels of semi-skilled, skilled and managerial workers relative to unskilled workers	168
Table 7.1	Spatial distribution of outputs	183

Table 7.2	Spatial distribution of raw materials and component parts	184
Table 7.3	The percentage of firms manufacturing for stock	187
Table 7.4	Percentage of firms involved in subcontracting relationships by industrial sector	189
Table 7.5	Percentage of firms actively involved in research and development	194
Table 7.6	The percentage of firms incorporating quality at the end, or during the production process	198
Table 7.7	The average age of capital	202
Table 7.8	The percentage of firms with technologically advanced capital	203
Table 7.9	Capacity utilization rates within the matched plants	204
Table 7.10	Average number of machine breakdowns	205
Table A1.1	The regimes of accumulation throughout the 20th Century	243

List of figures

Figure 2.1	Employees in manufacturing as a percentage of total non-agricultural employment 1973 to 1994	46
Figure 2.2	Unemployment rates as a percentage of the civilian labour force, 1973 to 1994	53
Figure 2.3	Self-employed in Northern Ireland 1981-1991	55
