

# CONTENTS

Preface	vii
Introduction	1
Chapter 1	
Elements of Graph Theory and Computational Complexity of Algorithms	40
1. Sets, Orders, Graphs	40
2. Balanced 2-3-Trees	50
3. Polynomial Reducibility of Discrete Problems. Complexity of Algorithms	58
4. Bibliography and Review	68
Chapter 2	
Polynomially Solvable Problems	69
1. Preemption	70
2. Deadline-Feasible Schedules	78
3. Single Machine. Maximal Cost	93
4. Single Machine. Total Cost	103
5. Identical Machines. Maximal Completion Time. Equal Processing Times	122
6. Identical Machines. Maximal Completion Time. Preemption	134
7. Identical Machines. Due Dates. Equal Processing Times	147
8. Identical Machines. Maximal Lateness.	158
9. Uniform and Unrelated Parallel Machines. Total and Maximal Cost	163
10. Bibliography and Review	175

<b>Chapter 3</b>	
<b>Priority-Generating Functions. Ordered Sets of Jobs</b>	
1. Priority-Generating Functions	186
2. Elimination Conditions	187
3. Tree-like Order	196
4. Series-Parallel Order	202
5. General Case	213
6. Convergence Conditions	224
7. 1-Priority-Generating Functions	233
8. Bibliography and Review	246
	249
<b>Chapter 4</b>	
<b><i>NP</i>-Hard Problems</b>	
1. Reducibility of the Partition Problem	253
2. Reducibility of the 3-Partition Problem	253
3. Reducibility of the Vertex Covering Problem	260
4. Reducibility of the Clique Problem	280
5. Reducibility of the Linear Arrangement Problem	288
6. Bibliographic Notes	297
	303
<b>Appendix</b>	
<b>Approximation Algorithms</b>	312
<b>References</b>	324
<b>Additional References</b>	354
<b>Index</b>	365
<b>Also of Interest</b>	371
