

## CONTENTS

**Series Editor's Introduction** v

**Preface** vii

**1. Introduction** 1

Repeated Surveys: Same Questions, Different Samples 1

Repeated Surveys Versus Panel Surveys 2

Analytic Designs for Repeated Surveys 4

A Note on Terminology 5

**2. Distinguishing Age, Period, and Cohort Effects** 6

Age, Period, and Cohort Effects 6

The Identification Problem 8

Strategies for Overcoming the Identification Problem 9

**3. Aggregate Trends** 12

Smoothing Trends 12

Group Differences in Trends: Convergence and  
Divergence 14

Empirical Example of the Divergence Model: Testing the Age  
Polarization Thesis 17

**4. Decomposing Aggregate Trends** 20

Intracohort Change Versus Overall Change 21

Linear Decomposition 23

Empirical Example: Trend in Antiblack Prejudice 26

Algebraic Decomposition 27

Empirical Example: Trend in Antiblack Prejudice  
Revisited 29

When Does Aggregate Change Outpace Individual  
Change? 29

Empirical Example of the Rule: Gender Role Attitudes 32

Concluding Remark 35

<b>5. A General Model for Decomposing Aggregate Change</b>	<b>35</b>
The Model	36
Multivariate Decomposition	39
Example: Declining Voter Turnout in the United States	40
Conclusion	42
<b>6. Detecting Change in Individual-Level Relationships</b>	<b>42</b>
The Changing-Parameter Model	42
General Form of the Model	43
Significance Tests for Changing Effects	45
Two Preliminary Examples	46
Step-by-Step Illustration of Changing-Parameter Analysis:	
Race and Democratic Party Identification	47
Net Effects of Race on Democratic Party Identification	56
Second Illustration of Changing-Parameter Model:	
Class and Democratic Party Identification	57
Summary and Extensions	62
<b>7. Summary: Analyzing Social Change</b>	<b>63</b>
Notes	66
References	68
About the Author	72
