Editorial Introduction to the First Edition	xiii
Preface to the Second Edition	xv
1 Introduction	1
Alan Heaton	
1.1 Development of the chemical industry	1
1.2 What the chemical industry does	2
1.3 Characteristics of the industry	4
1.4 Sectors of the industry	6
1.4.1 High-volume and low-volume sectors	7
1.5 Conversion of chemicals into consumer products	8
1.6 The chemical industry	9
1.6.1 Its importance	9
1.6.2 Major chemicals-producing countries	9
1.6.3 Multinational chemical companies	9
1.7 Quality and safety	10
1.7.1 Quality	10
1.7.2 Safety	11
1.8 Environmental aspects	12
1.9 The importance of team-work	12
References	13
2 Quality and safety issues	14
Christine Ryan and Tony Ryan	
2.1 Quality	14
2.1.1 The quality revolution	14
2.1.2 The quality philosophy	16
2.1.3 Quality accreditation	20
2.1.4 Quality structure	21
2.1.5 Techniques of quality implementation	23
2.1.6 Quality case histories	26
2.1.7 Conclusion	28
2.2 Health and safety	29
2.2.1 Introduction	30
2.2.2 Safety organisation	31
2.2.3 Legislation	31
2.2.4 Hazard and risk	35
2.2.5 Conclusion	37
Acknowledgements	37
References	37
3 Environmental issues	39
Alan Heaton	
3.1 Introduction	39
3.2 Some environmental disasters	42
3.2.1 DDT	42

3.2.2	Minamata Bay	42
3.2.3	Flixborough	43
3.2.4	Seveso	43
3.2.5	Bhopal	44
3.2.6	Other examples	46
3.3	Public response to the disasters	46
3.4	The chemical companies' response	47
3.5	The way forward?	49
3.6	Conclusions	51
	References	52
	Bibliography	52

4 Polymers 53

Jack Candlin

4.1	Introduction	53
4.1.1	Commodity polymers	54
4.1.2	Engineering polymers	54
4.1.3	Advanced polymeric materials	55
4.2	Molecular weight of polymers	55
4.2.1	Gel permeation chromatography (GPC)	56
4.3	Chemistry of polymerisation	57
4.3.1	Step-growth polymerisation	57
4.3.2	Chain-growth polymerisation	61
4.4	Homopolymers and copolymers	73
4.4.1	Homopolymers	73
4.4.2	Copolymers	76
4.5	Manufacture of polymers	86
4.5.1	Polymerisation techniques	88
4.6	Properties of polymers	98
4.6.1	Effect of temperature on polymers	98
4.6.2	Glass transition temperature, T_g	100
4.6.3	Crystallisation of polymers	107
4.6.4	Properties associated with amorphous and crystalline polymers	113
4.6.5	Liquid crystalline polymers (LCP)	119
4.7	Thermoset polymers and cross-linking	121
4.7.1	Examples of step-growth thermosets	122
4.7.2	Examples of chain-growth thermosets	125
4.7.3	General properties of thermosets	126
4.8	Elastomers (rubbers)	126
4.8.1	Requirements for polymeric elastic behaviour	128
4.8.2	Chemical cross-linking to produce elastomers	130
4.8.3	Thermoplastic elastomers (TPE)	133
4.9	Fibres	135
4.9.1	Spinning processes	135
4.9.2	Prerequisites for fibre formation	136
4.9.3	Mechanical strength of fibres	138
4.9.4	Requirements to be met by textile fibres	138
4.10	Present and future developments in polymer chemistry	140
	Bibliography	142

5 Dyestuffs 143

Peter Gregory

5.1	Historical aspects	143
5.1.1	Natural dyes	143
5.1.2	Synthetic dyes	144

5.2	Classification and nomenclature of dyes	147
5.2.1	Chemical classification of dyes	147
5.2.2	Usage classification of dyes	148
5.2.3	Nomenclature of dyes	149
5.3	Colour and constitution	150
5.3.1	Azo and anthraquinone dyes	150
5.3.2	Indigo	152
5.3.3	Phthalocyanines	153
5.3.4	Theoretical calculations	153
5.4	World production	156
5.5	Major products	156
5.5.1	Raw materials	156
5.5.2	Intermediates	167
5.5.3	Dyes	176
5.6	Application and fastness properties	177
5.6.1	Physical adsorption	177
5.6.2	Solid solutions	178
5.6.3	Insoluble aggregates within the fibre	179
5.6.4	Ionic bonds	180
5.6.5	Covalent bonds	181
5.6.6	Light fastness	182
5.7	Dye manufacture	182
5.8	Current and future trends	182
5.8.1	Toxicity and ecology	184
5.8.2	Techno-economic factors	187
	References	188
	Bibliography	

6 The sulphur, phosphorus, nitrogen and chlor-alkali industries **189**

Stephen Black

6.1	Introduction	189
6.2	Sulphuric acid	191
6.2.1	Introduction	191
6.2.2	Raw materials	191
6.2.3	The manufacturing process	192
6.2.4	Uses of sulphuric acid	193
6.3	Phosphorus-containing compounds	194
6.3.1	Raw materials	194
6.3.2	Direct production of phosphoric acid	194
6.3.3	Elemental phosphorus and derivatives	195
6.3.4	Uses of phosphorus-containing compounds	196
6.4	Nitrogen-containing compounds	196
6.4.1	Introduction	196
6.4.2	The Haber process for ammonia synthesis	199
6.4.3	Nitric acid	201
6.4.4	Urea	201
6.5	Chlor-alkali and related compounds	201
6.5.1	Introduction	202
6.5.2	Lime-based products	202
6.5.3	Soda-ash	204
6.5.4	Electrolytic processes for chlorine/caustic soda	209
6.5.5	The uses of chlorine and sodium hydroxide	209
6.6	Conclusion	209
6.6.1	The wider world	210
6.6.2	The synthesis of methyl methacrylate	212
6.7	The future for basic chemicals	213
	Bibliography and recommended reading	

7	Agrochemicals	214
	Alan Heaton	
7.1	Introduction	214
7.1.1	Origins of the industry	214
7.1.2	Artificial fertilizers	215
7.1.3	Pesticides	217
7.2	Present position of the industry	217
7.2.1	Financial importance of pesticides	218
7.2.2	General characteristics of the agrochemicals industry	220
7.2.3	Control of the use of pesticides	222
7.3	Discovery and development of new pesticides	223
7.3.1	Outline schemes	224
7.3.2	Cost, timescale and success rate	227
7.3.3	Patents position	228
7.3.4	Summary	229
7.4	Fungicides	230
7.4.1	Introduction	230
7.4.2	Inorganic fungicides	231
7.4.3	Dithiocarbamates	231
7.4.4	Sulphenimides	232
7.4.5	Systemic fungicides	233
7.5	Herbicides	237
7.5.1	Introduction	237
7.5.2	Phenoxyalkane carboxylic acids	238
7.5.3	Substituted ureas	243
7.5.4	Triazines	244
7.5.5	Bipyridylum salts	245
7.5.6	Glyphosate	246
7.5.7	Sulphonylureas	247
7.5.8	Other herbicides	248
7.5.9	Plant growth regulators (plant hormones)	251
7.6	Insecticides	252
7.6.1	Introduction	252
7.6.2	Naturally occurring insecticides	253
7.6.3	Synthetic insecticides	255
7.6.4	Alternative methods of insect control	264
7.7	Pesticide resistance	267
7.8	Integrated pest management	268
7.9	The future	268
	References	270
	Bibliography	271

8	The pharmaceutical industry	272
	Craig Thornber	

8.1	Introduction	272
8.2	The world pharmaceutical market	274
8.2.1	Introduction	274
8.2.2	Companies	274
8.2.3	Products	277
8.3	The initiation of a project in the pharmaceutical industry	279
8.3.1	General considerations	279
8.3.2	The research portfolio	281
8.3.3	The research phase	284
8.3.4	The development phase	286
8.4	Financial and economic considerations	296
8.4.1	Research costs	296

8.4.2	Effects on the UK economy	298
8.5	Health benefits	300
8.6	Future trends	301
8.6.1	Scientific and technical factors	301
8.6.2	Economic and political factors	302
8.7	Sources of information on drugs	303
	References and bibliography	305
9	Biological catalysis and biotechnology	306
	Mike Turner	
9.1	Introduction	306
9.2	Microbial synthesis of primary metabolites	308
9.2.1	Organic solvents	308
9.2.2	Carboxylic acids	320
9.2.3	Amino acids	324
9.3	Microbial synthesis of secondary metabolites	329
9.4	Microbial synthesis of proteins	337
9.4.1	Biologically active proteins	337
9.5	Microbial transformations	342
9.5.1	L-Ascorbate (vitamin C)	343
9.5.2	D-Ephedrine	344
9.5.3	Steroid transformations	345
9.6	Enzymatic processes	347
9.6.1	The synthesis of fructose from starch	348
9.6.2	Hydrolysis of penicillin G to 6-aminopenicillanic acid (6-APA)	351
9.6.3	Synthesis of L-amino acids	353
9.7	Clean chemistry	357
9.8	Enzymes in unusual reaction conditions	360
9.9	Laboratory scale synthesis (the chiral switch)	361
9.10	A new catalysis	363
9.10.1	Metabolic pathway engineering	363
9.10.2	Artificial enzymes	367
	References	371
	Bibliography	372
10	The future	373
	Alan Heaton	
10.1	Current situation	373
10.2	Significant influences	373
10.3	The future	375
10.3.1	Constraints	375
10.3.2	Prospects	375
	Index	377
