

CONTENTS OF VOLUME 1A

Introduction to the Series	v
Contents of the Handbook	vii
Preface to the Handbook	xi
PART 1 – EMPIRICAL AND HISTORICAL PERFORMANCE	
<i>Chapter 1</i>	
Business Cycle Fluctuations in US Macroeconomic Time Series JAMES H. STOCK and MARK W. WATSON	3
Abstract	4
Keywords	4
1. Introduction	5
2. Empirical methods of business cycle analysis	8
2.1. Classical business cycle analysis and the determination of turning points	8
2.2. Isolating the cyclical component by linear filtering	10
3. Cyclical behavior of selected economic time series	14
3.1. The data and summary statistics	14
3.2. Discussion of results for selected series	39
4. Additional empirical regularities in the postwar US data	46
4.1. The Phillips curve	46
4.2. Selected long-run relations	50
Acknowledgements	56
Appendix A. Description of the data series used in this chapter	56
A.1. Series used in Section 1	56
A.2. Series used in Section 2	56
A.3. Additional series used in Section 4	60
References	61
<i>Chapter 2</i>	
Monetary Policy Shocks: What Have we Learned and to What End? LAWRENCE J. CHRISTIANO, MARTIN EICHENBAUM and CHARLES L. EVANS	65
Abstract	66
Keywords	66

1. Introduction	67
2. Monetary policy shocks: some possible interpretations	71
3. Vector autoregressions and identification	73
4. The effects of a monetary policy shock: a recursiveness assumption	78
4.1. The recursiveness assumption and VARs	78
4.2. Three benchmark identification schemes	83
4.3. Results for other economic aggregates	91
4.4. Robustness of the benchmark analysis	96
4.5. Discriminating between the benchmark identification schemes	114
4.6. Monetary policy shocks and volatility	123
5. The effects of monetary policy shocks: abandoning the recursiveness approach	127
5.1. A fully simultaneous system	128
6. Some pitfalls in interpreting estimated monetary policy rules	134
7. The effects of a monetary policy shock: the narrative approach	136
8. Conclusion	143
References	145

Chapter 3

Monetary Policy Regimes and Economic Performance: The Historical Record MICHAEL D. BORDO AND ANNA J. SCHWARTZ	149
Abstract	151
Keywords	151
1. Policy regimes, 1880–1995	152
1.1. Definition of a policy regime	152
1.2. Types of regimes	152
1.3. Rules vs. discretion in monetary regimes	153
2. International monetary regimes	153
2.1. The gold standard	153
2.2. Interwar vicissitudes of the gold standard	161
2.3. Bretton Woods	163
2.4. The recent managed float and the European Monetary System	167
3. Episodes in US central banking history	168
3.1. Origins of US central banking	168
3.2. Federal Reserve 1914	172
3.3. Interwar years, 1919–1941	175
3.4. Bretton Woods, 1946–1971	188
3.5. Post-Bretton Woods, 1971–1995	192
3.6. Conclusion	199
4. Monetary regimes and economic performance: the evidence	202
4.1. Overview	202
4.2. Theoretical issues	202
4.3. Measures of macroeconomic performance, by regime	204

4.4. Inflation and output levels and variability	206
4.5. Stochastic properties of macrovariables	211
4.6. Inflation persistence, price level predictability, and their effects on financial markets	213
4.7. Temporary and permanent shocks	216
5. Overall assessment of monetary policy regimes	219
Acknowledgments	220
Appendix A. Data sources	220
A.1. United States of America	220
A.2. United Kingdom	221
A.3. Germany	222
A.4. France	222
A.5. Japan	223
References	223

Chapter 4

The New Empirics of Economic Growth

STEVEN N. DURLAUF and DANNY T. QUAH 235

Abstract 236

Keywords 236

1. Introduction 237

2. Preliminaries and stylized facts 238

3. Theoretical models 240

4. From theory to empirical analysis 246

 4.1. The neoclassical model: one capital good, exogenous technical progress 246

 4.2. The neoclassical model: multiple capital goods 254

 4.3. Endogenous growth: asymptotically linear technology 257

 4.4. Nonconvexities and poverty traps 261

 4.5. Endogenous growth: R&D and endogenous technical progress 264

 4.6. Growth with cross-country interactions 265

5. Empirical techniques 268

 5.1. Cross-section regression: β -convergence 269

 5.2. Augmented cross-section regression 276

 5.3. Panel-data analysis 283

 5.4. Time series: unit roots and cointegration 287

 5.5. Clustering and classification 289

 5.6. Distribution dynamics 290

6. Conclusion 294

Appendix A. Proofs and additional discussions 295

 A.1. Single capital good, exogenous technical progress 295

 A.2. Endogenous growth: asymptotically linear technology 297

 A.3. Distribution dynamics 299

Appendix B. Data 301

References 303

PART 2 – METHODS OF DYNAMIC ANALYSIS

Chapter 5

Numerical Solution of Dynamic Economic Models

MANUEL S. SANTOS

Abstract	311
Keywords	312
1. Introduction	312
2. The model and preliminary considerations	313
3. Bellman's equation and differentiability of the value function	314
3.1. Bellman's equation and the contraction property of the dynamic programming algorithm	319
3.2. Differentiability of the value function	320
4. A numerical dynamic programming algorithm	321
4.1. Formulation of the numerical algorithm	324
4.2. Existence of numerical solutions and derivation of error bounds	324
4.3. Stability of the numerical algorithm	326
4.4. Numerical maximization	328
4.5. Numerical integration	329
5. Extensions of the basic algorithm	332
5.1. Multigrid methods	334
5.2. Policy iteration	334
5.3. Modified policy iteration	336
5.4. Polynomial interpolation and spline functions	338
6. Numerical approximations of the Euler equation	340
6.1. Numerical methods for approximating the Euler equation	345
6.2. Accuracy based upon the Euler equation residuals	347
7. Some numerical experiments	352
7.1. A one-sector deterministic growth model with leisure	355
7.2. A one-sector chaotic growth model	355
7.3. A one-sector stochastic growth model with leisure	362
8. Quadratic approximations	364
9. Testing economic theories	368
10. A practical approach to computation	375
References	379
	382

Chapter 6

Indeterminacy and Sunspots in Macroeconomics

JESS BENHABIB and ROGER E.A. FARMER

Abstract	387
Keywords	388
1. Introduction	388
2. Why should we care?	389
2.1. Technical aspects of linear models	390
	391

2.2. Indeterminacy and propagation mechanisms in real models of business cycles	393
2.3. Indeterminacy and propagation mechanisms in monetary models of business cycles	395
3. Indeterminacy in real models	398
3.1. A framework for comparing different models	398
3.2. The one-sector model with increasing returns	400
3.3. The two-sector model with increasing returns	401
3.4. The two-sector model with constant marginal returns	403
3.5. Fixed costs and the role of profits	405
3.6. Models with variable markups	405
4. Indeterminacy in monetary models	407
4.1. Monetary models with one state variable and fixed labor supply	408
4.2. Money in the utility function and the production function	410
4.3. Monetary models with one state variable and a variable labor supply	411
4.4. Monetary models with several state variables	413
5. Indeterminacy and policy feedback	416
5.1. Fiscal policy feedback	416
5.2. Monetary policy feedback	417
5.3. Interest rate rules and indeterminacy	419
5.4. Monetary models and sticky prices due to frictions in the trading process	422
6. Indeterminacy and models of endogenous growth	423
7. Some related work	426
8. Empirical aspects of models with indeterminacy	427
8.1. Real models and propagation dynamics	427
8.2. Monetary models and the monetary transmission mechanism	437
9. Some criticisms of the use of models with indeterminate equilibria to describe data	438
9.1. Equilibrium selection	438
9.2. Equilibrium forecast functions	440
9.3. Does indeterminacy have observable implications?	442
10. Conclusion	442
Acknowledgements	443
References	443

Chapter 7

Learning Dynamics

GEORGE W. EVANS and SEPPO HONKAPOHJA 449

Abstract 452

Keywords 452

1. Introduction 453

1.1. Expectations and the role of learning 453

1.2. Some economic examples 456

1.3. Approaches to learning 461

1.4. Examples of statistical learning rules 465

1.5. Adaptive learning and the E-stability principle	472
1.6. Discussion of the literature	473
2. General methodology: recursive stochastic algorithms	475
2.1. General setup and assumptions	475
2.2. Assumptions on the algorithm	476
2.3. Convergence: the basic results	478
2.4. Convergence: further discussion	480
2.5. Instability results	481
2.6. Further remarks	482
2.7. Two examples	483
2.8. Global convergence	486
3. Linear economic models	487
3.1. Characterization of equilibria	487
3.2. Learning and E-stability in univariate models	488
3.3. Univariate models – further extensions and examples	497
3.4. Multivariate models	502
4. Learning in nonlinear models	506
4.1. Introduction	506
4.2. Steady states and cycles in models with intrinsic noise	507
4.3. Learning sunspot equilibria	515
5. Extensions and recent developments	521
5.1. Genetic algorithms, classifier systems and neural networks	521
5.2. Heterogeneity in learning behavior	527
5.3. Learning in misspecified models	528
5.4. Experimental evidence	530
5.5. Further topics	531
6. Conclusions	533
References	533

Chapter 8

Micro Data and General Equilibrium Models

MARTIN BROWNING, LARS PETER HANSEN and JAMES J. HECKMAN	543
Abstract	544
Keywords	544
Introduction	545
1. Stochastic growth model	547
1.1. Single consumer model	548
1.2. Multiple agents	552
1.3. Incomplete markets	566
2. Overlapping generations model	576
2.1. Motivation	576
2.2. Economic models of earnings and human capital investment	577
2.3. Structure of the model	587

2.4. Determining the parameters of OLG models	592
3. Micro evidence	594
3.1. Introduction	594
3.2. Defining elasticities	594
3.3. Consumption estimates	605
3.4. Labor supply	614
3.5. Heterogeneity in the marginal rate of substitution between goods and leisure	620
Summary and conclusion	623
References	625

PART 3 – MODELS OF ECONOMIC GROWTH

Chapter 9

Neoclassical Growth Theory	
ROBERT M. SOLOW	637
Abstract	638
Keywords	638
1. Introduction	639
2. The Harrod–Domar model	640
3. The basic one-sector model	641
4. Completing the model	642
5. The behaviorist tradition	643
6. The optimizing tradition	646
7. Comparing the models	648
8. The Ramsey problem	649
9. Exogenous technological progress	650
10. The role of labor-augmentation	651
11. Increasing returns to scale	652
12. Human capital	653
13. Natural resources	655
14. Endogenous population growth and endogenous technological progress in the neoclassical framework	657
15. Convergence	659
16. Overlapping generations	660
17. Open questions	663
References	665

Chapter 10

Explaining Cross-Country Income Differences	
ELLEN R. McGRATTAN and JAMES A. SCHMITZ, Jr.	669
Abstract	670
Keywords	670
1. Introduction	671

2. Some basic facts	674
3. Accounting	678
3.1. Levels accounting	678
3.2. Growth accounting	687
4. Growth regressions	688
5. Quantitative theory	695
5.1. Effects of policy on disparity	695
5.2. Effects of policy on growth	709
6. Two growth models and all of the basic facts	720
6.1. An exogenous growth model	724
6.2. An endogenous growth model	730
7. Concluding remarks	733
Acknowledgements	734
References	734
