Contents

1 Partial Information and Sensitivity Analysis in Decision Making. Introduction 1

1.1 Bayesian decision analysis 2

1.1.1 Problems under certainty 3

1.1.2 Problems under uncertainty 4

1.1.3 Comment 5

1.2 Some views on other decision aids 6

1.2.1 Fuzzy-set based decision analysis: Yager's method 6

1.2.2 The Analytic Hierarchy Process: a comment 9

1.2.3 Outranking methods: Comments on ELECTRE I 13

1.2.4 Interactive decision aids 16

1.2.5 A general comment 20

1.3 Our problem 21

1.4 Some previous thoughts 22

1.4.1 The problem 22

1.4.2 Foundations of decision making under partial information . . 23

1.4.3 Ordering the alternatives. Decision making under partial information 23

1.4.4 Additional criteria 23

1.4.5 Hierarchical approaches 24

1.4.6 Detection of sensitivity 24

1.4.7 Sensitivity problems are not important 24

1.4.8 Sensitivity measures 25

1.4.9 Detection of competitors 25

1.4.10 What to do about sensitivity? 25

1.4.11 Error modelling 25

1.4.12 Sensitivity analysis in commercial decision aids 25

1.5 Comments 27

2 Decision Making under Partial Information: Theory and Algorithms 28
2.1 Some basic results . . . 29
2.2 Judgemental quasi orders . . . 29
2.2.1 General preference quasi orders under certainty . . . 30
2.2.2 Additive models . . . 32
2.2.3 Preference quasi orders under uncertainty . . . 45
2.3 A parametric model . . . 51
2.3.1 The certainty case . . . 52
2.3.2 The uncertainty case . . . 52
2.4 Orders and solution concepts . . . 53
2.5 General algorithms . . . 59
2.5.1 Nondominated alternatives . . . 59
2.5.2 Potentially optimal alternatives . . . 61
2.6 Some particular cases . . . 63
2.6.1 Linear models . . . 63
2.6.2 Bilinear models . . . 67
2.7 Additional criteria . . . 69
2.7.1 Some additional criteria . . . 69
2.7.2 Hierarchical approaches . . . 71
2.8 Comments . . . 73

3 Sensitivity Analysis in Multi-objective Decision Making 74
3.1 Some basic results . . . 75
3.1.1 The maximum ranking function . . . 75
3.1.2 The optimality subsets . . . 80
3.2 Do we need sensitivity analysis? (Yes) . . . 83
3.2.1 Strong optimality . . . 83
3.2.2 A Flat Maxima Principle? . . . 86
3.2.3 Demands of a sensitivity analysis tool . . . 88
3.3 Adjacent potentially optimal solutions . . . 89
3.3.1 Adjacent potential optimality . . . 89
3.3.2 Adjacent potential optimality according to ω . . . 92
3.3.3 Straight adjacent potential optimality . . . 92
3.3.4 Relations between the concepts . . . 93
3.4 Some sensitivity tools . . . 93
3.4.1 A class of sensitivity tools . . . 94

3.4.2 Gauge function based sensitivity tools 96
3.5 Error modelling in decision analysis 103
3.5.1 Errors in judgemental modelling 104
3.5.2 An error model 106
3.5.3 Some thoughts on the elements of the problem 112
3.6 Comments 126

4 Computational experience **127**
4.1 An introduction to SENSATO 127
4.2 Linear models: Flood-plain management 132
4.2.1 The model 133
4.2.2 Input to SENSLIN 134
4.2.3 Results 134
4.3 Bilinear models: Portfolio selection 143
4.3.1 The model 144
4.3.2 Input to SENSBIL 145
4.3.3 Results 146
4.4 General models: Technology-purchasing decision 147
4.4.1 The model 149
4.4.2 Input to SENSGEN 150
4.4.3 Results 151
4.5 Dallas' problem revisited 151
4.5.1 The model 152
4.5.2 Results 153
4.6 Questioning a model: Road selection 153
4.6.1 Analysis 1 154
4.6.2 The model (Analysis 1) 155
4.6.3 Results 156
4.6.4 Analysis 2 156
4.6.5 The model (Analysis 2) 157
4.6.6 Results(Analysis 2) 158
4.7 Some counterexamples 158
4.7.1 The model 159
4.7.2 Results 160
4.8 Comments 161

5 Conclusions **164**

5.1 Summary 164

5.2 Topics for further research 165

5.2.1 Decision making under partial information 165

5.2.2 Sensitivity analysis 167

5.2.3 Computation 168

5.2.4 Group decision making 170

5.2.5 Imprecision in expert systems 170

5.2.6 Restructuring 170

5.2.7 Integration with other methodologies 171

Bibliography **172**

Appendix **186**
