<b>1 Introduction</b>	1
<b>1.1 A Synoptic View of the Meta Study</b> <i>by Egon Matzner and Michael Wagner</i>	3
Background and tasks	3
Coordination	6
Micro-macro problem	7
Main results	8
Areas of influence	10
Micro-macro interdependencies: Three circuits	17
References	20

**2 On the Diffusion of New Technology: The Case of Micro-Electronics 21**

**2.1 The Nature of Employment Effects of New Technology 23**  
*by Hans-Jürgen Ewers, Carsten Becker and Michael Fritsch*

I. The problem 23  
II. Direct employment effects of computer-aided technologies in a sample of German manufacturing plants 25  
III. Determinants of the adoption of computer-aided technologies 27  
IV. Market context, technology use and employment effects 30  
V. Indirect employment effects of computer-aided technologies and 'systemic rationalization' 34  
VI. Conclusions 39  
References 40

**Comment by John Alic 42**  
Background 42  
The results of Ewers, Becker and Fritsch 43  
New-model organizations 46  
Concluding remarks 49
