Preface	V
Contents	VII
Mathematical Notations	XI
Introduction	1
1. Survey of Methodologies	5
2. Planning with Temporal Constraints	35
2.1 Graphs, Weighted Graphs, Bipartite Graphs	35
Subgraphs	38
Digraphs	38
Walks in Graphs and Digraphs	41
Connected Graphs, Weakly and Strongly Connected Digraphs	41
Trees	42
Graph Matrices	43
Digraph Representation of Plans	43
2.2 Activity Networks	44
Planning with Activity Networks	45
Activity Network Unfoldings	49
3. Disciplined Planning	51
3.1 Top-Down Development of Plans	52
3.2 Disciplined Planning Syntax	58

4. Planning under Precedence/Duration Constraints: Networking Techniques	65
4.1 No Choices, No Cycles, Known Durations: CPM	66
Execution Control: Event Time Bounds	67
Critical Paths	69
Event Realization Slacks	70
Activity Time Bounds	73
4.2 No Choices, No Cycles, Known Direct Costs: Cost-CPM	75
Updating of Time Schedule and Cost Plan	78
Cost Optimization	81
Analytical Cost Optimization Algorithm	82
A Heuristic Speeding Up Algorithm	83
Operational Considerations	85
4.3 No Choices, No Cycles, Beta-Distributed Durations: PERT	87
Probability Distribution of Activity Durations	88
The Beta Distribution	88
The Critical Path Question	93
Investigation of Project Completion Time	94
Warnings about Improper Use of PERT	97
PERT Cost Planning and Optimization	101
Operational Considerations	102
4.4 Choices, Cycles, Random Durations: GERT	103
Event Realization "Logics"	103
Network Structure	107
Probability Distribution of Activity Durations	108
STEOR Networks and Markov Renewal Processes	110
The MRP Method	112
Simulation of GERT Networks	117
5. Clock-Independent Planning: Petri Nets	119
5.1 Causal Interconnection of State and Transition Elements: Nets	121
Enabling, Steps, Reachability	124
Pure Nets, Simple Nets	126
S-Graph, T-Graph, Free Choice Net	126
Subnets, S-Vectors, T-Vectors	128
5.2 Causal Interconnection of Conditions and Events: CE Nets	129
About Petri Net Plans	133

5.3 Causal Interconnection of Resources and Operations: PT Nets	134
Incidence Matrix	139
Reachability Graph	141
Liveness, Stop States and Home States	143
5.4 Conservation of Resource Counts and Reproduction of States:	
S- and T-Invariants	145
Calculation of Invariants	149
Project Analysis by Means of Invariants	153
5.5 Representing Operations with Variable Resources Compactly:	
an Outline of PrT Nets	156
6. Net Plan Executions	163
6.1 Representing Net Plan Executions	164
Execution Nets	165
6.2 Figuring Out Execution Alternatives: Control Nets	170
7. Choosing a Course of Action: Operational Decision Making	185
7.1 Execution Alternatives	186
7.2 The Formal Representation of Vagueness: Fuzzy Sets	186
7.3 Fuzzy Attributes	188
Attributes over Operations	189
Attributes over Alternatives	190
Attributes over Executions	191
7.4 Preference Degree of Executions. Optimal Executions	198
Weighted Attributes	200
7.5 Clustering Executions into Preference Classes: Fuzzy Outranking	207
Fuzzy Outranking Relation	208
Classification of Executions	216
Singling out Best Executions: Dichotomy	216
Partitioning Executions into Preference Classes: Polychotomy	217
References	219
Further Reading	221
Index	227
