<i>List of Figures</i>	<i>viii</i>
<i>List of Tables</i>	<i>xi</i>
<i>Preface</i>	<i>xiv</i>
<i>List of Abbreviations</i>	<i>xvi</i>
1 Introduction	1
Advanced Manufacturing Technologies	2
Benefits of AMT	6
Traditional Investment Appraisal	9
Investment Decisions for AMT	10
Outline of the Text	14
2 A Review of Previous Models for the Evaluation of Investment Decisions in AMT	17
The Quantitative Approach	18
The Qualitative Approach	25
The Integrated Approach	27
Discussion and Conclusions	48
3 Empirical Research Design	55
A Review of Previous Empirical Studies	56
The Objectives of the Empirical Study and Research Questions	62
Research Methodology	63
Conclusions	77
4 The Cross-sectional Survey of UK Investment Decision Making	81
Summary and Analysis of the Survey Results	82

	Discussion	108
	Conclusions	120
5	The Field Study of AMT Investment Decisions in Some Large UK Companies	123
	Case 1 - Baby Food Ltd	124
	Case 2 - Engineering Plc	128
	Case 3 - Newspapers Plc	137
	Case 4 - Tobacco Ltd	141
	Case 5 - Packaging Plc	149
	Case 6 - Heavy Engineering Plc	155
	Case 7 - Maritime Ltd	161
	Discussion and Conclusions	165
6	Fuzzy Set Theory	177
	Chapter Preview	177
	Introduction	178
	Basics of Fuzzy Sets	180
	Mathematics of Fuzzy Numbers	188
	Ranking Fuzzy Numbers	211
	Linguistic Variables	229
	Conclusions	239
7	A Fuzzy Approach to the Evaluation of AMT Investment Projects	245
	A Review of Previous Studies Using Fuzzy Set Theory for the Evaluation of Capital Investment Projects	246
	A Proposed Model for AMT Investment Decisions	259
	An Illustrative Example	279
	Conclusions	295
8	Summary and Conclusions	299
	A Synthesis of Previous Models	299
	The Empirical Studies	301

An Examination of Fuzzy Set Theory	306
The Development of an AMT Investment Decision Model	307
Suggestions for Further Research	310
<i>Bibliography</i>	<i>313</i>
<i>Appendices</i>	<i>329</i>
<i>Index</i>	<i>343</i>

List of Figures

2.1	A proposed classification scheme	18
2.2	A relationship between IRR and Payback period	20
2.3	The decision analysis	24
2.4	Developing the problem hierarchy	33
2.5	Srinivasan and Millen's hierarchy example	38
2.6	Putrus's model hierarchy	40
2.7	The sub-criteria for each main criterion (strategy) in O'Brien and Smith's model (1993)	45
4.1	Types of AMT projects according to their installation period	84
4.2	The expected life of AMT projects	86
4.3	Benefits of AMT investments (% of respondents)	88
4.4	The most important financial appraisal technique (%)	92
5.1	The investment decision model in Baby Food Ltd	129
5.2	The investment decision model in Engineering Plc	136
5.3	The investment decision model in Newspaper Plc	142
5.4	The investment decision model in Tobacco Ltd	150
5.5	The investment decision model in Packaging Plc	156
5.6	The investment decision model in Heavy Engineering Plc	160
5.7	The investment decision model in Maritime Ltd	165
5.8	A general model for AMT investment decision making	173
6.1	Real number close to 10	182
6.2	A convex fuzzy set	184
6.3	A non-convex fuzzy set	184
6.4a	Fuzzy number 'approximately 10' (normal and convex)	189
6.4b	Normal but non-convex	189
6.4c	Convex but sub-normal	190
6.5a	A discrete fuzzy number	191
6.5b	A continuous fuzzy number	191
6.6	A fuzzy number 'approximately 6'	194
6.7	Fuzzy numbers A, B, and A (+) B	195
6.8	Subtraction of two fuzzy numbers A and B	198

6.9	Multiplication of two fuzzy numbers A and B	200
6.10	L-R fuzzy number	202
6.11	An L-R flat fuzzy number	205
6.12	A triangular fuzzy number	207
6.13	A trapezoidal fuzzy number	209
6.14	Three alternative choices represented by their fuzzy numbers	212
6.15	The maximising set of Jain's method	217
6.16	A counter-intuitive result using Jain's method	218
6.17	The maximising and minimising sets of Chen's method	220
6.18	An example of Chen's method	221
6.19a	An example of the illogicality in Chen's method	222
6.19b	An example of the illogicality in Chen's method	222
6.20	Chen and Hwang's method	223
6.21	An example of Chen and Hwang's method	224
6.22	A proposed ranking method	225
6.23	An example of the proposed ranking method	228
6.24	Hierarchical structure of a linguistic variable 'age'	231
6.25a	Scale 1	235
6.25b	Scale 2	235
6.25c	Scale 3	236
6.25d	Scale 4	236
6.25e	Scale 5	237
6.25f	Scale 6	237
6.25g	Scale 7	238
6.25h	Scale 8	238
7.1	A triangular fuzzy number P	247
7.2	Exact fuzzy present value and its approximate form	251
7.3	Membership functions of 'very important', 'important' and 'more-or-less important' values	258
7.4	A model for AMT investment decision making	260
7.5	The non-financial criteria hierarchy	267
7.6	Membership functions of linguistic scale	271
7.7	The risk measure hierarchy	274
7.8	A three dimensional analysis for selecting AMT investment projects	278

7.9a	Sensitivity of <i>FNPV</i> to changes in the annual net cash flows after tax (project I)	284
7.9b	Sensitivity of <i>FNPV</i> to changes in the annual net cash flows after tax (project II)	284
7.9c	Sensitivity of <i>FNPV</i> to changes in the annual net cash flows after tax (project III)	284
7.10a	Sensitivity of <i>FNPV</i> to changes in the discount rate (project I)	285
7.10b	Sensitivity of <i>FNPV</i> to changes in the discount rate (project II)	285
7.10c	Sensitivity of <i>FNPV</i> to changes in the discount rate (project III)	285
7.11a	Sensitivity of <i>FNPV</i> to changes in the project's life (project I)	286
7.11b	Sensitivity of <i>FNPV</i> to changes in the project's life (project II)	286
7.11c	Sensitivity of <i>FNPV</i> to changes in the project's life (project III)	286
7.12	The non-financial criteria hierarchy	287
7.13	The risk measure hierarchy	290
7.14a	The <i>FNPV</i> for the three projects	293
7.14b	The <i>FNFM</i> for the three projects	293
7.14c	The <i>FRM</i> for the three projects	293
7.15	A graphical presentation of the example	295

List of Tables

2.1	An example for unweighted 0-1 factor model	28
2.2	Illustrative example for Parsaei and Wilhelm's model	32
2.3	The measurement scale of AHP	33
2.4	The results of pairwise comparisons	34
2.5	Random inconsistency index (<i>RI</i>)	36
2.6	A numerical example for Putrus's model	42
2.7	Weight of factors considered in AMT projects	44
3.1	Previous studies regarding investment decisions in general	58
3.2	Stages in selecting the companies to be included in the sample	67
3.3	A summary of statistical tests	72
3.4	Some demographic information of the interviewees	75
4.1	Investment in AMT by type of projects	83
4.2	Types of AMT projects according to the installation period	83
4.3	Classification of companies according to their level of AMT	85
4.4	The expected life for AMT projects	85
4.5	Benefits of AMT investments (% of respondents)	87
4.6	Difficulties in evaluating AMT investment projects	89
4.7	Opinions of respondents regarding three propositions	90
4.8	The importance of the financial appraisal techniques (% of respondents)	91
4.9	The most important financial appraisal technique	92
4.10	Descriptive statistics for the financial appraisal techniques	94
4.11	Results of Kruskal-Wallis test regarding financial appraisal techniques	95
4.12	The importance of the non-financial criteria (% of respondents)	96
4.13	Descriptive statistics for the non-financial criteria	97
4.14	Results of Kruskal-Wallis test for non-financial criteria	98

4.15	The significant non-financial criteria in evaluating AMT investments	99
4.16	The importance of the risk analysis techniques (% of respondents)	100
4.17	Descriptive statistics for the risk analysis techniques	102
4.18	Results of Kruskal-Wallis one-way ANOVA for the risk analysis techniques	103
4.19	The importance of the three dimensions of measuring project risks	104
4.20	Descriptive statistics for the three measures of project risk	105
4.21	Results of Kruskal-Wallis one-way ANOVA for Accola's risk measures	105
4.22	The most frequently used payback period in the companies	106
4.23	Results of Pearson chi-square test	107
4.24	The minimum required rates of return or discount rates	107
4.25	Results of Pearson chi-square test	108
5.1	Projects under investigation in the field study	166
5.2	Main reasons for investing in AMT	166
5.3	Financial appraisal methods used	168
5.4	The non-financial criteria	169
6.1	Example of complement, intersection and union of two fuzzy sets	186
6.2	An example for algebraic operations on L-R fuzzy numbers	204
6.3	A numerical example for L-R flat fuzzy numbers	206
6.4	An example for algebraic operations on triangular fuzzy numbers	209
6.5	A numerical example for trapezoidal fuzzy numbers	211
6.6	The $R_M(i)$, $L_G(i)$ and $T(i)$ of the three alternatives	221
6.7	Generating additional linguistic values	234
6.8	Summary of linguistic values used in the eight scales	239
7.1	Membership functions for linguistic variables X (<i>IMPORTANCE</i>) and Y (<i>CAPABILITY</i>)	254
7.2	The geometric mean for the linguistic values	270
7.3	Weights of the linguistic values	270
7.4	Linguistic scales for non-financial criteria	272
7.5	The fuzzy linguistic scale for risk factors	276

7.6	Stepwise description of the AMT investment decision algorithm	280
7.7	Estimated fuzzy initial investments (I_0) and fuzzy net cash flows after tax (x_t) (£000,000s)	281
7.8	Sensitivity of FNPV to changes in the annual net cash flows after tax (£000,000s)	283
7.9	Sensitivity of FNPV to changes in the discount rate (£000,000s)	283
7.10	Sensitivity of FNPV to changes in the project life (£000,000s)	283
7.11	The linguistic importance of the non-financial criteria	288
7.12	The scale importance of the non-financial criteria	288
7.13	The linguistic ratings assigned to the alternatives	288
7.14	The scale ratings assigned to the alternatives	289
7.15	The importance weight of the risk factors	290
7.16	The equivalent fuzzy number weight of the risk factors	290
7.17	The qualitative evaluation of the alternatives with respect to risk factors	291
7.18	The scale evaluation of the alternatives with respect to risk factors	291
7.19	Summary of the three fuzzy measures	292
7.20	The ranked values of the three fuzzy measures	294
7.21	The normalised ranked values of the three fuzzy measures	294
