Contents

Preface **xi**

1 Introduction to Operations Research **1**
1.1 A Brief History 1
1.2 The Method of OR 2
1.3 About This Book 4

2 A Quick Tour of Maple **5**
2.1 Introduction 5
2.2 Symbolics 6
2.2.1 Expanding, Factoring and Simplifications 6
2.2.2 Function Definitions Using "->" and `unapply()` . . . 8
2.2.3 Lists, Sets and Arrays 9
2.2.4 Additional Commands to Manipulate Expressions 12
2.2.5 Solving Equations Analytically 14
2.3 Numerics 15
2.3.1 Solving Equations Numerically 16
2.3.2 Statistical Computations Using the `stats` Package 17
2.3.3 The `simplex` Package 19
2.4 Graphics 19
2.4.1 Two-dimensional Plots 20
2.4.2 Three-Dimensional Plots 24
2.5 Other Useful Commands and Packages 27
2.5.1 The `piecewise()` Command 27

2.5.2 The `interface()` Command 29
2.5.3 The `infolevel[]` Command 30
2.5.4 Exporting to C, FORTRAN and LaTeX 31
2.5.5 Programming in Maple 32
2.5.6 The `finance` Package 33
2.6 Summary 35
2.7 Exercises 35

3 Maple and Mathematical Foundations of Operations Research **37**
3.1 Introduction 37
3.2 Algebra 38
3.2.1 Solution of a Single Equation or Inequality 38
3.2.2 Solution of a System of Nonlinear Equations 41
3.3 Calculus 44
3.3.1 Limits 44
3.3.2 Derivatives 45
3.3.3 Integrals 49
3.3.4 Finite Sums and Infinite Series 54
3.4 Linear Algebra 55
3.4.1 Matrix Operations 55
3.4.2 Solution of Simultaneous Linear Equations 58
3.4.3 Eigenvalues, Eigenvectors and Diagonalization 61
3.4.4 Least Squares Fitting to Data 63
3.4.5 Special Matrices 66
3.4.6 Positive Definiteness 67
3.5 Differential Equations 68
3.5.1 Ordinary Differential Equations 69
3.5.2 Partial Differential Equations 77
3.5.3 Difference (Recurrence) Equations 79
3.6 Transform Methods 81
3.6.1 Laplace Transforms 81
3.6.2 Generating Functions 85
3.7 Probability 88
3.7.1 Continuous and Discrete Random Variables 88
3.7.2 Expectation 92
3.7.3 Jointly Distributed Random Variables 95
3.8 Summary 96
3.9 Exercises 96

4 Linear Programming **99**
4.1 Introduction 99
4.2 Graphical Solution 100
4.3 The Simplex Method 104
4.3.1 Manual Solution of the Production Problem 107
4.3.2 Solution Using Maple's `simplex` Package 113

4.3.3 A Problem with Mixed Constraints . . . 116
4.4 Special Cases and Difficulties . . . 118
4.4.1 Infeasibility . . . 118
4.4.2 Unbounded Solutions . . . 119
4.4.3 Degeneracy . . . 119
4.5 Other Examples . . . 120
4.5.1 The Transportation Problem . . . 121
4.5.2 Two-Person Zero-Sum Games . . . 124
4.5.3 A Linear Program with Randomly Generated Data . . . 129
4.6 Sensitivity Analysis and Duality . . . 130
4.6.1 Changes in the RHS Values and Dual Prices . . . 130
4.6.2 Changes in the Objective Function Coefficients . . . 133
4.6.3 Addition of a New Decision Variable . . . 135
4.6.4 Duality . . . 136
4.7 Integer Linear Programming . . . 145
4.8 Summary . . . 147
4.9 Exercises . . . 148

5 Nonlinear Programming **153**
5.1 Introduction . . . 153
5.2 Convexity of Sets and Functions . . . 154
5.2.1 Positive and Negative Definite Matrices . . . 157
5.2.2 Convexity of a Function and Definiteness of its Hessian . 160
5.2.3 Examples of Definiteness/Convexity . . . 160
5.2.4 Cholesky Factorization . . . 164
5.3 Unconstrained Optimization . . . 166
5.4 Inequality and Equality Constrained Optimization . . . 170
5.4.1 Geometric Interpretation of Kuhn-Tucker Conditions . . . 173
5.4.2 Constraint Qualification . . . 174
5.4.3 An Equivalent Formulation Using the Lagrangian . . . 176
5.4.4 Economic Interpretation of the Lagrange Multipliers . . . 181
5.5 Lagrangian Duality . . . 183
5.6 Summary . . . 190
5.7 Exercises . . . 190

6 Dynamic Programming **193**
6.1 Introduction . . . 193
6.2 Stagecoach Problem . . . 197
6.3 Models with a Linear System and Quadratic Cost . . . 201
6.3.1 The Infinite-Stage Problem . . . 207
6.4 Continuous-Time Dynamic Programming . . . 211
6.4.1 A Problem with Linear System and Quadratic Cost . . . 214
6.4.2 A Problem with Quadratic and Linear Costs . . . 215
6.5 A Constrained Work Force Planning Model . . . 219
6.6 A Gambling Model with Myopic Optimal Policy . . . 224

6.7 Optimal Stopping Problems 228
6.7.1 The Infinite-Stage Problem 230
6.8 Summary 233
6.9 Exercises 233

7 Stochastic Processes **237**
7.1 Introduction 237
7.2 Exponential Distribution and Poisson Process 238
7.2.1 Memoryless Property of the Exponential Distribution . . . 239
7.2.2 Hazard Rate Function 240
7.2.3 The Erlang Random Variable 241
7.2.4 Poisson Process 243
7.2.5 Interarrival Times of the Poisson Process 246
7.2.6 Density of the Erlang—An Equivalent Derivation 246
7.2.7 Nonhomogeneous Poisson Process 247
7.2.8 Compound Poisson Process 251
7.3 Renewal Theory 256
7.3.1 Preliminaries 257
7.3.2 Distribution of $N(t)$ 257
7.3.3 Renewal Function and Renewal Density 259
7.3.4 Renewal Equation and the Key Renewal Theorem 262
7.3.5 Renewal Reward Process 268
7.4 Discrete-Time Markov Chains 271
7.4.1 Chapman-Kolmogorov Equations 276
7.4.2 Limiting Probabilities and the Stationary Distribution . . 278
7.4.3 Classification of States 287
7.4.4 Imbedded Markov Chain Technique 293
7.4.5 Transient Behavior of Markov Chains 301
7.5 Continuous-Time Markov Chains 305
7.5.1 Kolmogorov Differential Equations 308
7.5.2 Limiting Probabilities 318
7.6 Summary 327
7.7 Exercises 327

8 Inventory Models **331**
8.1 Introduction 331
8.2 Classification of Inventory Models 332
8.3 Costs Associated with Inventory Models 334
8.3.1 Procurement Cost 334
8.3.2 Holding (or Carrying) Cost 334
8.3.3 Penalty Cost 334
8.4 Deterministic Inventory Models 335
8.4.1 The Basic EOQ Model 335
8.4.2 The EOQ Model with Planned Backorders 338
8.4.3 Analysis of Implied Backorder Costs 343

8.4.4 Quantity Discounts 346
8.5 Probabilistic Inventory Models 349
8.5.1 The Continuous-Review Model: Approximate Formulation 349
8.5.2 The Continuous-Review Model: Exact Formulation 354
8.5.3 One-Period (Newsvendor) Model with Random Demand . 358
8.5.4 Dynamic Inventory Models 361
8.5.5 Diversification Under Yield Randomness 366
8.6 Summary 371
8.7 Exercises 371

9 Queueing Systems **375**
9.1 Introduction 375
9.2 Markovian Queueing Systems 377
9.2.1 Birth and Death Processes 377
9.2.2 $M/M/1$ Queueing System 378
9.2.3 Finite Capacity Markovian Queue: $M/M/1/K$ 382
9.2.4 Multiserver Queue $M/M/c$ 383
9.2.5 Markovian Bulk Arrival System: $M^X/M/1$ 387
9.3 Transient Solutions 389
9.3.1 Finite Capacity $M/M/1/K$ Queue with $K = 1$ 389
9.3.2 Ample Server System $M/M/\infty$ 391
9.4 Queueing Networks 394
9.4.1 Serial Queue with Blocking 394
9.4.2 Jackson Networks 398
9.5 Optimization of Queueing Systems 401
9.5.1 A Transportation Queueing Process 402
9.5.2 An $M/M/1$ System with Controlled Arrivals 404
9.5.3 Optimal Dynamic Service Rate Control 406
9.6 Summary 413
9.7 Exercises 413

10 Simulation **417**
10.1 Introduction 417
10.2 Generating (Pseudo-) Random Numbers 423
10.2.1 Mixed-Congruential Method 424
10.2.2 Maple's Uniform Random Number Generator 426
10.2.3 Kolmogorov-Smirnov Test for Uniformity 426
10.3 Generating Random Variates from Other Distributions 428
10.3.1 Exponential Random Variates 429
10.3.2 Maple's Random Variate Generators 430
10.4 Monte Carlo Simulation 432
10.4.1 Numerical Evaluation of Definite Integrals 432
10.4.2 Simulation of a Static (Single-Period) Problem 434
10.5 Dynamic Simulation Models 435
10.5.1 Simulation of an Inventory System with Random Yield . . 436

10.5.2 Simulation of a Non-Markovian Queue 438
10.6 Optimization by Random Search 441
10.7 Summary 445
10.8 Exercises 446
