|   |           |
|---|-----------|
| <b>Preface</b>  | <b>xi</b> |
| <b>Chapter 1 – Introduction</b>   | <b>3</b>  |
| <b>Chapter 2 – Lattices, Supermodular Functions, and Related Topics</b> | <b>7</b>  |
| 2.1 Introduction  | 7         |
| 2.2 Partially Ordered Sets and Lattices                                 | 11        |
| 2.2.1 Definitions, Notation, and Some Basic Properties                  | 11        |
| 2.2.2 Sublattice Structure  | 17        |
| 2.3 Completeness and Topological Properties                             | 29        |
| 2.4 Induced Set Ordering  | 32        |
| 2.5 Fixed Points  | 38        |
| 2.6 Supermodular Functions on a Lattice                                 | 42        |
| 2.6.1 Characterization and Complementarity                              | 42        |
| 2.6.2 Transformations   | 49        |
| 2.6.3 Ordinal Generalizations   | 58        |
| 2.6.4 Log-Supermodularity   | 64        |
| 2.7 Maximizing a Supermodular Function                                  | 66        |
| 2.7.1 Sets of Maximizers  | 66        |
| 2.7.2 Preservation of Supermodularity                                   | 70        |
| 2.8 Increasing Optimal Solutions  | 74        |
| 2.8.1 Sufficient Conditions   | 74        |
| 2.8.2 Necessary Conditions  | 83        |
| 2.9 Complementarity Equivalences  | 92        |
| <b>Chapter 3 – Optimal Decision Models</b>                              | <b>94</b> |
| 3.1 Introduction  | 94        |
| 3.2 Matching  | 95        |
| 3.3 Comparative Statics of the Firm                                     | 102       |
| 3.3.1 Model of the Firm   | 103       |
| 3.3.2 Sufficient Conditions   | 104       |
| 3.3.3 Necessary Conditions  | 121       |

- 3.4 Transportation and Transshipment Problems 125
  - 3.4.1 Transportation Problem 125
  - 3.4.2 Transshipment Problem 129
- 3.5 Dynamic Economic Lot Size Production Models, Acyclic Networks 131
  - 3.5.1 Acyclic Networks 132
  - 3.5.2 Dynamic Economic Lot Size Production Models 134
- 3.6 Production Planning 138
- 3.7 Minimum Cuts, Maximum Closures, and the Selection Problem 142
  - 3.7.1 Minimum Cut Problem 143
  - 3.7.2 Maximum Closure Problem 146
  - 3.7.3 Selection Problem 148
  - 3.7.4 Equivalent Combinatorial Structures 150
- 3.8 Myopic Decisions 151
  - 3.8.1 General Conditions 152
  - 3.8.2 Dynamic Selection Problem 155
- 3.9 Markov Decision Processes and Property-Inducing Stochastic Transformations 158
  - 3.9.1 Property-Inducing Stochastic Transformations 159
  - 3.9.2 Markov Decision Processes 163
- 3.10 Stochastic Inventory Problems and Supermodularity-Preserving Stochastic Transformations 169
  - 3.10.1 Supermodularity-Preserving Stochastic Transformations 169
  - 3.10.2 Stochastic Inventory Problems 170

## **Chapter 4 – Noncooperative Games**

175

- 4.1 Introduction 175
- 4.2 Existence of an Equilibrium Point, Parametric Properties 179
- 4.3 Algorithms for Approximating an Equilibrium Point 185
  - 4.3.1 Round-Robin Optimization 185
  - 4.3.2 Simultaneous Optimization 190
- 4.4 Examples of Supermodular Games 195
  - 4.4.1 Pricing Game with Substitute Products 196
  - 4.4.2 Production Game with Complementary Products 198
  - 4.4.3 Multimarket Oligopoly 199
  - 4.4.4 Arms Race Game 200
  - 4.4.5 Trading Partner Search Game 201
  - 4.4.6 Optimal Consumption Game with Multiple Products 202
  - 4.4.7 Facility Location Game 203
  - 4.4.8 Minimum Cut Game 204

**Chapter 5 – Cooperative Games****207**

- 5.1 Introduction 207
- 5.2 Convex Games 211
  - 5.2.1 The Core and the Greedy Algorithm 211
  - 5.2.2 Games with a Parameter 221
  - 5.2.3 Structure of the Core 223
- 5.3 Examples of Convex Games 238
  - 5.3.1 Monopoly Firm 238
  - 5.3.2 Monotonic Surplus Sharing 240
  - 5.3.3 Aircraft Landing Fee Game 241
  - 5.3.4 Trading Game 243
- 5.4 Activity Optimization Games 244
- 5.5 Examples of Activity Optimization Games 248
  - 5.5.1 General Welfare Game 249
  - 5.5.2 Production Game with Common Procurement of Inputs 250
  - 5.5.3 Investment and Production Game 252
  - 5.5.4 Activity Selection Game 253
  - 5.5.5 Waste Disposal Game 256
- 5.6 Games with Complementarities That Are Not Convex Games 258
  - 5.6.1 Network Design Game 258
  - 5.6.2 Max-Min Game 261
