<i>Preface</i>	ix
1. Human Population and Carrying Capacity	1
2. Natural Resources, Pollution, and Carrying Capacity	33
3. Criteria for Determining Earth's Carrying Capacity	77
4. World Order and Environmental Stability	101
5. Problems and Prospects	123
<i>Glossary</i>	143
<i>Bibliography</i>	153
<i>Name Index</i>	165
<i>Subject Index</i>	169

Illustrations

TABLES

1.1	Projected world average annual rates of growth and doubling time, by region and level of development: 1990-1995	7
3.1	Estimates on carrying capacities of the earth	85

FIGURES

1.1	A fundamental principle of population ecology	5
1.2	Growth curve for human population, past and projected	6
1.3	Carrying capacity and environmental resistance	9
1.4	The S-shaped curve	12
1.5	The J-shaped curve	13
1.6	Population of Africa, Europe, Latin America, North America, and U.S.S.R., 1800 to 1987	15
1.7	The three phases of populations	17
1.8	Total U.S. population, 1900 to 1987, and projected to 2025	18
1.9	U.S. population growth rates, 1960 to 1987	19

1.10	U.S. age structure pyramid	21
1.11	Population of the world and Asia, 1800 to 1987	22
1.12	Comparison of age structure pyramids between developing and developed nations	23
2.1	The anthroposystem	36
2.2	An anthroposystem as a synthesis of sustainable human systems	41
2.3	Cycling of matter through an anthroposystem	42
2.4	Carbon dioxide concentration in air, 1958 to 1985	55
2.5	Three possible relationships between excess environmental risk and pollution doses at different exposure levels	64
2.6	Carrying capacity and anthroposystem size (resource content)	66
2.7	Effects of resource magnitude on an anthroposystem's integrity	68
2.8	Two dimensions of the configuration of an anthroposystem	69
2.9	A system requiring only five factors	70
2.10	An anthroposystem serving as a numerical measure of the limits within which a system can function	70
2.11	The principle of a universal control mechanism	74
3.1	World agricultural production	90
4.1	Ecological deterioration as a function of pollution	112
