*Introduction and Preface*

*page xi*

<b>1 Probability</b>	1
1.1 Probabilities and Events	1
1.2 Conditional Probability	5
1.3 Random Variables and Expected Values	9
1.4 Covariance and Correlation	13
1.5 Exercises	15
<b>2 Normal Random Variables</b>	20
2.1 Continuous Random Variables	20
2.2 Normal Random Variables	20
2.3 Properties of Normal Random Variables	24
2.4 The Central Limit Theorem	27
2.5 Exercises	29
<b>3 Geometric Brownian Motion</b>	32
3.1 Geometric Brownian Motion	32
3.2 Geometric Brownian Motion as a Limit of Simpler Models	33
3.3 Brownian Motion	35
3.4 Exercises	36
<b>4 Interest Rates and Present Value Analysis</b>	38
4.1 Interest Rates	38
4.2 Present Value Analysis	42
4.3 Rate of Return	51
4.4 Continuously Varying Interest Rates	54
4.5 Exercises	56
<b>5 Pricing Contracts via Arbitrage</b>	61
5.1 An Example in Options Pricing	61
5.2 Other Examples of Pricing via Arbitrage	64
5.3 Exercises	70

<b>6</b>	<b>The Arbitrage Theorem</b>	72
6.1	The Arbitrage Theorem	72
6.2	The Multiperiod Binomial Model	76
6.3	Proof of the Arbitrage Theorem	78
6.4	Exercises	81
<b>7</b>	<b>The Black–Scholes Formula</b>	85
7.1	The Black–Scholes Formula	85
7.2	Properties of Black–Scholes Option Cost	90
7.3	Estimating $\sigma$	91
7.4	Pricing American Put Options	92
7.5	Comments	97
7.5.1	When the Option Cost Differs from the Black–Scholes Formula	97
7.5.2	When the Interest Rate Changes	98
7.5.3	Final Comments	99
7.6	Exercises	100
<b>8</b>	<b>Valuing by Expected Utility</b>	103
8.1	Limitations of Arbitrage Pricing	103
8.2	Valuing Investments by Expected Utility	104
8.3	The Portfolio Selection Problem	110
8.3.1	Estimating Covariances	119
8.4	The Capital Assets Pricing Model	120
8.5	Mean Variance Analysis of Risk-Neutral–Priced Call Options	121
8.6	Rates of Return: Single-Period and Geometric Brownian Motion	124
8.7	Exercises	125
<b>9</b>	<b>Exotic Options</b>	129
9.1	Introduction	129
9.2	Barrier Options	129
9.3	Asian and Lookback Options	130
9.4	Monte Carlo Simulation	131
9.5	Pricing Exotic Options by Simulation	132
9.6	More Efficient Simulation Estimators	134
9.6.1	Control and Antithetic Variables in the Simulation of Asian and Lookback Option Valuations	134

9.6.2	Combining Conditional Expectation and Importance Sampling in the Simulation of Barrier Option Valuations	138
9.7	Options with Nonlinear Payoffs	140
9.8	Pricing Approximations via Multiperiod Binomial Models	141
9.9	Exercises	143
<b>10</b>	<b>Beyond Geometric Brownian Motion Models</b>	146
10.1	Introduction	146
10.2	Crude Oil Data	147
10.3	Models for the Crude Oil Data	153
10.4	Final Comments	155
<b>11</b>	<b>Autogressive Models and Mean Reversion</b>	166
11.1	The Autoregressive Model	166
11.2	Valuing Options by Their Expected Return	167
11.3	Mean Reversion	170
11.4	Exercises	172
	<i>Index</i>	183
