
Contents

Chapter 1

Interaction and Distance	1
Interaction Observed.....	1
Distance	2
Mathematical Note 1.1 Alternative Interaction Laws.....	3
Mathematical Note 1.2 Gravity Laws	5
Mathematical Note 1.3 Random Utility.....	5
Mathematical Note 1.4 Gravity Derived From Utility.....	6
Mathematical Note 1.5 Alternative Derivation of an Exponential Distance Effect.....	7
Mathematical Note 1.6 Maximum Likelihood and Entropy.....	8
Mathematical Note 1.7 A Search Model	9
Mathematical Note 1.8 Shopping Trips, Demand, and Distance	10
References	11

Chapter 2

Market Areas	13
Mathematical Note 2.1 The Shape of Market Areas	16
Mathematical Note 2.2 Market Areas as Regular Polygons	17
Mathematical Note 2.3 Models of Market Share.....	19
References	20

Chapter 3

Spatial Price Policy	21
Linear Demand Functions	21
Nonlinear Demand.....	24
Cartels and Collusive Oligopoly	25
Mathematical Note 3.1 Sales and Average Prices	25
Mathematical Note 3.2 Transportation Cost.....	27
Mathematical Note 3.3 Profits.....	28
Mathematical Note 3.4 Market Radius	34
3.5 Examples	38
3.5.1 Rectangular Demand Curve	38

3.5.2 Exponential Demand Function	40
3.5.3 Constant Elasticity Demand Function	41
References	43

Chapter 4

Spatial Markets	45
Market and Supply Areas.....	46
Competition with Uniform Pricing.....	47
Trade Centers	47
Spatial Equilibrium in Labor Markets	48
Continuous Space Markets	48
Mathematical Note 4.1 Number of Firms and Price in a Common Market Area	49
Mathematical Note 4.2 Competition in Overlapping Market Areas, Uniform Pricing	51
Mathematical Note 4.3 Equilibrium of Trade Centers	53
Mathematical Note 4.4 Spatial Equilibrium in Labor Markets.....	54
Mathematical Note 4.5 Spatial Equilibrium in a Continuous Market	57
Mathematical Note 4.6 Existence of Spatial Markets	58
References	60

Chapter 5

Location of an Economic Activity	61
Orientation	61
Market Orientation.....	64
Location in a Network.....	66
Mathematical Note 5.1 Launhardt-Weber Model.....	66
Mathematical Note 5.2 Principle of the Median	67
Mathematical Note 5.3 The Hakimi-Gülicher Theorem.....	69
References	69

Chapter 6

Multiple Facility Location	71
The McDonald Problem.....	71
Public Facilities.....	72
Warehouses and Fire Stations	73
Mathematical Note 6.1 The McDonald Problem	74
Mathematical Note 6.2 Home Delivery.....	78
Mathematical Note 6.3 School Districting in a Homogenous Urban Area	78
Mathematical Note 6.4 Increasing Returns in Schools and Optimal District Size	79
Mathematical Note 6.5 Locating Services When Demand Decreases With Distance... ..	80
Mathematical Note 6.6 The Warehousing Problem	81
Mathematical Note 6.7 The Covering Problem.....	82
References	84

Chapter 7

Dispersion	85
Löschian Equilibrium.....	85
Uniform Pricing: Bertrand Oligopoly.....	87
Other Pricing Strategies	87
Mathematical Note 7.1 The Lösch Model for Circular Markets	87
Mathematical Note 7.2 Mills-Lav Effect.....	90
Mathematical Note 7.3 Bertrand Oligopoly with Uniform Prices.....	92
Mathematical Note 7.4 Cournot Oligopoly with Mill Pricing.....	94
Mathematical Note 7.5 Consistent Conjectural Variation: Linear Market, Rectangular Demand, Mill Pricing.....	96
Mathematical Note 7.6 Contesting Duopoly with Price Discrimination.....	97
References	98

Chapter 8

Localization	99
Resource Oriented Industry	99
Externalities.....	100
Retail Stores.....	101
Gravitation to the Median: the Hotelling Effect	101
Mathematical Note 8.1 Resource Oriented Industry.....	101
Mathematical Note 8.2 Hotelling Model	103
Mathematical Note 8.3 Hotelling Model for Linear Demand Functions.....	103
References	105

Chapter 9

Agglomeration	107
Mathematical Note 9.1 Incentives for Joint Location.....	109
Mathematical Note 9.2 Intermediate Products	110
Mathematical Note 9.3 Agglomeration Economies Versus Scale Economies.....	111
References	112

Chapter 10

Assignment	113
The Linear Assignment Problem	113
The Quadratic Assignment Problem	115
Location of Production in the Short Run	115
Mathematical Note 10.1 Integer Assignments are Optimal.....	116
Mathematical Note 10.2 Efficiency Conditions for the Linear Assignment Problem.....	117
Mathematical Note 10.3 The Quadratic Assignment Problem: An Example.....	118
Mathematical Note 10.4 Location of Production in the Short Run: Plant Utilization.....	119
References	120

Chapter 11

Land Use	121
Agricultural Land Use	121
von Thünen's Rings	122
Quantitative Demand	123
Variable Proportions	123
Local Consumption	124
Soil and Climate	124
Wage Differences	124
Transportation Facilities	125
The Isolated State as a Spatial Equilibrium System	125
Urban Land Use	126
Bidding for Land Use	128
Mathematical Note 11.1 Extent of Cultivation	128
Mathematical Note 11.2 von Thünen Model as a Linear Program	130
Mathematical Note 11.3 Neo-classical Production Functions	132
Mathematical Note 11.4 The Closed von Thünen Economy	134
Mathematical Note 11.5 The Monocentric City	137
Mathematical Note 11.6 Land Use under Spatially Dispersed Demand	139
References	140

Chapter 12

Urban Systems	143
Mathematical Note 12.1 Market Size for Central Place Goods	145
Mathematical Note 12.2 Basic Grid Length in Hexagonal Tiling	146
Mathematical Note 12.3 Derivation of Rank-size Rule	147
References	148

Chapter 13

Transportation Systems	149
Mathematical Note 13.1 Traffic Flow in Networks	151
Mathematical Note 13.2 Traffic Equilibrium	154
Mathematical Note 13.3 Allocation in Public Transportation	155
Mathematical Note 13.4 Capacitated Hub and Spoke Systems	157
Mathematical Note 13.5 Refraction of Traffic	158
References	159

Chapter 14

The Spatial Economics of Knowledge	161
Knowledge Production	161
Knowledge Distribution	164
Mathematical Note 14.1 Knowledge Diffusion as a Spatial Process	165
Mathematical Note 14.2 Collaboration and Distance	168
References	170

Chapter 15

Welfare	171
Mathematical Note 15.1 The Optimal Size of a Market.....	172
Mathematical Note 15.2 Welfare Maximizing Market Size for Rectangular Demand, Independent of Price	175
Mathematical Note 15.3 Optimal Market Size under Marginal Cost Pricing.....	179
Mathematical Note 15.4 Optimal Market Size for Linear Demand and Mill Pricing	181
Mathematical Note 15.5 Welfare Optimal Market Size for Uniform Pricing.....	183
Mathematical Note 15.6 Welfare Optimal Pricing.....	184
Mathematical Note 15.7 Welfare Comparison of Spatial Price Systems.....	186
Mathematical Note 15.8 Efficient Size and Structure of the Monocentric City	188
Mathematical Note 15.9 Tolls for Road Investment.....	191
Conclusion.....	192
References	193
Suggested Reading	195
