<i>Preface</i>	xi
1 Demographic growth in Europe	1
Quantitative growth	
The space for demographic growth	
Food resources and population	
Demographic trends: theories and interpretations	
Demographic cycles and nutritional revolutions	
2 Energy, nutrition and survival	23
Nutritional requirements	
Theoretical nutritional requirements for historical and contemporary populations	
Energy and nutrients	
Nutrition and mortality	
Nutrition and infection: a controversial association	
3 Famine and want	40
Starvation and survival: clinical and historical cases	
Three cases of starving populations in our own century	
Subsistence crises and mortality in the pre-industrial age	
A brief chronology of European famines	
An econometric analysis of prices and mortality	
4 The starving and the well-fed	63
The élites and the masses: equal in the face of death?	
New countries and old countries	
An interlude: changes in mortality transition in the eighteenth century	
Nutrition and infant mortality	
Factors relating to infant mortality in the <i>ancien régime</i>	

5	Food and standard of living: hypotheses and controversies	79
	Soundings in a vast sea	
	Bread and meat	
	New crops. Did diet improve in the eighteenth century?	
	The standard of living and real wages	
	Stature, living conditions and food	
6	Antagonism and adaptation	111
	Constraints and biological adaptation	
	Nutrition and Malthusian repressive checks	
	A return to Malthus by other routes	
	<i>Notes</i>	122
	<i>General index</i>	145

Figures

	<i>page</i>
1 World population by continent, 1200–1900	2
2 Increases of six populations as a percentage of European growth	4
3 The relationship between fertility, R , life expectancy, e_0 , and growth, r	9
4 The Malthusian system of positive and preventive checks during a period of demographic expansion and one of decline	13
5 Life expectancy in some populations	20
6 Calorie supply in France by composition and source, eighteenth to twentieth centuries	32
7 Calorie supply in Italy by composition and source, nineteenth to twentieth centuries	33
8 Malnutrition and mortality	37
9 Indices for wheat prices and deaths in Siena, sixteenth to eighteenth centuries	52
10 Indices of wheat prices and deaths in England, France and Tuscany (1704–14=100)	56
11 Life expectancy, e_0 , total population and peers, England, 1550–1799	65
12 Percentage variations in the probability of death in certain countries during the first mortality transition, eighteenth to nineteenth centuries	72
13 Energy consumption in certain European zones, fourteenth to twentieth centuries	84
14 Daily per capita consumption of bread and cereals in certain European zones, fourteenth to twentieth centuries	90

- | | | |
|----|---|-----|
| 15 | Real wages in England, thirteenth to nineteenth centuries, for farmhands and carpenters | 101 |
| 16 | Prices and wages in some European countries in the sixteenth and eighteenth centuries | 103 |
| 17 | Real wages and life expectancy in England, 1541–1850 | 104 |
| 18 | Real wages in Florence and frequency of mortality crises in Tuscany, fourteenth to sixteenth centuries | 105 |
| 19 | Real wages in Milan and frequency of mortality crises in north-central Italy, seventeenth to eighteenth centuries | 107 |

Tables

	<i>page</i>
1 World population by area, 1200–1900	2
2 The development of six European populations, 1600–1850	6
3 Three standards of energy requirement (daily caloric intake)	24
4 Average theoretical caloric requirements for several populations	26
5 Nutrient requirements and diseases resulting from their deficiency	28
6 Per capita daily calorie supply by origin and composition in France and Italy, eighteenth to twentieth centuries	31
7 Influence of nutritional level on certain infective processes	37
8 Energy consumption of thirty-two young men before and after six months of semi-starvation	43
9 Coefficients of elasticity for deaths with respect to wheat prices in England, 1548–1834	58
10 Coefficients of elasticity for deaths with respect to wheat prices in England and France, 1670–1829	60
11 Coefficients of elasticity for deaths in certain localities in Tuscany with respect to wheat prices in Siena, 1609–1760	61
12 Life expectancy at birth for some European populations in the eighteenth and nineteenth centuries	70
13 Incidence of certain groups of infectious disease on mortality in some countries in the nineteenth century	71
14 Infant and child mortality in four European countries during the second half of the eighteenth century	74
15 Caloric balance of some European populations, fourteenth to twentieth centuries (daily calories per head)	82

16	Unit price per 1,000 calories for a number of foodstuffs in Florence, 1600-19	86
17	Daily per capita supply of bread and cereals, in grams, in Europe, fourteenth to nineteenth centuries	88
18	Meat consumption (yearly kg. per head) in Europe, fourteenth to nineteenth centuries	94
19	Height in cm. of soldiers under the Hapsburg Monarchy by region of birth, and in Sweden, generations 1740-1830	110
20	Phases in nutrition and demography among European populations	118
