

# Contents

<b>Introduction</b>	<b>1</b>
<b>1 Introduction to computer-aided engineering</b>	<b>2</b>
New technology in industry	2
Microprocessors and magnetic memory devices	3
Computer-generated graphics and design	4
Process control	6
System and software integration	7
<b>2 Basic NC/CNC</b>	<b>10</b>
CNC machine tool design	10
Principles of CNC machine operation	11
Computer principles	14
CNC part programs	16
Program proving	19
<b>3 Setting and operation</b>	<b>22</b>
Introduction	22
Safety precautions	23
Swarf removal	23
Work and tool changing	24
Emergency shutdowns	24
CNC machines	24
NC and CNC systems	26
Work holding and setting	27
Datums	27
Tool preparation and maintenance	28
Drawings and documentation	33
Part programs	34
Data preparation and transfer	35
<b>4 NC/CNC part programming</b>	<b>37</b>
Introduction	37
Principles of CNC control	38
Computer fundamentals	40
Part program pre-planning	42
Program structure (word address format)	45
Program terminology	46
Repetitive programming	52
Advanced technology	54
<b>5 Advanced part programming</b>	<b>55</b>
Manual part programming	55
Computer-aided part programming	61

Using a CAP system	65
Computer-integrated manufacture	76
Flexible manufacturing systems	78
CIM case study	81
<b>6 Basic CAD/CAM</b>	<b>85</b>
Introduction	85
Case study of a manufacturing process	85
Simple process analysis/database	87
The basic CAD/CAM system	89
Economic, technical and social considerations	92
<b>7 Computer-aided draughting</b>	<b>94</b>
Introduction	94
Comparison of CAD with conventional draughting	95
CAD system procedures	96
CAD system software structure	100
Graphics software	101
User software	106
CAD system 'housekeeping'	106
CAD system evaluation	108
<b>8 Advanced CAD</b>	<b>113</b>
Computer-aided engineering environment	113
CAD environment	119
Effective use of CAD	124
Three-dimensional modelling	126
CAD system analysis functions	129
<b>9 Basic robotics</b>	<b>133</b>
The background to robotics	133
Robot arm geometry	136
The end-effector	139
Drive actuators	143
Mechanical transmission	146
<b>10 Robot technology</b>	<b>150</b>
The workcell and safety	150
Robot control systems	153
Programming	156
External sensing	160
Robot performance	163
Industrial installation of robots	164
Maintenance of robots	167

<b>11 Basic programmable logic controllers</b>	<b>170</b>
The function of a PLC	170
Design concepts	170
Types of PLC	171
PLC hardware design	173
Sensors	177
Programming of PLCs	178
Program operation	181

<b>12 More advanced PLCs</b>	<b>183</b>
Analogue inputs and outputs	183
Communications	184
Industrial PLC programming	188
<b>Glossary</b>	<b>192</b>
<b>Index</b>	<b>194</b>
