

## CONTENTS

<b>Acknowledgments</b>	<b>v</b>
<b>Series Editor's Introduction</b>	<b>vii</b>
<b>1. Introduction</b>	<b>1</b>
Model Specification	3
Prerequisites and Preliminaries	5
Probability Distributions	5
The Linear Model	6
Linear Algebra and Calculus	7
Software	8
Looking Forward	8
<b>2. The Exponential Family</b>	<b>9</b>
Justification	9
Derivation	11
Canonical Form	12
Multiparameter Models	13
<b>3. Likelihood Theory and the Moments</b>	<b>19</b>
Maximum Likelihood Estimation	19
Calculating the Mean of the Exponential Family	22
Calculating the Variance of the Exponential Family	25
The Variance Function	28
<b>4. Linear Structure and the Link Function</b>	<b>29</b>
The Generalization	30
Distributions	32
<b>5. Estimation Procedures</b>	<b>39</b>
Estimation Techniques	39
Newton–Raphson and Root Finding	39
Weighted Least Squares	42
Iterative Weighted Least Squares	44

<b>6. Residuals and Model Fit</b>	<b>51</b>
Defining Residuals	51
Anscombe Residuals	53
The Deviance Function and Deviance Residuals	56
Measuring and Comparing Goodness of Fit	61
Asymptotic Properties	66
<b>7. Conclusion</b>	<b>87</b>
Summary	87
Related Topics	88
Further Reading	88
Motivation	90
<b>Notes</b>	<b>92</b>
<b>References</b>	<b>94</b>
