Preface	vii
Contents of Volume I	xv
1 Extension of Classical Methods I	1
1.1 Introduction	1
1.2 A Brief Historical Review	4
1.3 The Nature of the GLSEM	6
1.4 The GLSEM: Assumptions and Notation	10
1.4.1 Assumptions and Conventions	12
1.4.2 Notation	15
1.5 Inconsistency of OLS Estimators	21
1.6 Two Stage Least Squares (2SLS)	27
1.6.1 The Original Derivation	27
1.6.2 An Alternative Formulation	28
1.7 Three Stage Least Squares (3SLS)	32
1.8 Restricted 2SLS and 3SLS Estimators	39
1.9 Tests of Prior Restrictions	42
1.9.1 Generalities	42
1.9.2 A Restricted Least Squares Interpretation of 2SLS and 3SLS	43
Questions and Problems	50

Appendix to Chapter 1		53
	Preliminaries to Hausman's Test	53
	Examples	57
2	Extension of Classical Methods II	61
2.1	Limiting Distributions	61
2.1.1	Preliminaries	61
2.1.2	Limiting Distributions for Static GLSEM	63
2.1.3	Limiting Distributions for Dynamic GLSEM	70
2.2	Forecasting from the GLSEM	83
2.2.1	Generalities	83
2.2.2	Forecasting from the URF	84
2.2.3	Forecasting from the RRF	93
2.3	The Vector Autoregressive Model (VAR)	102
2.4	Instrumental Variables (IV)	104
2.4.1	2SLS and 3SLS as IV Estimators	105
2.4.2	2SLS and 3SLS as Optimal IV Estimators	109
2.5	IV and Insufficient Sample Size	115
2.5.1	The Nature of the Problem	115
2.5.2	Iterated Instrumental Variables (IIV)	116
2.6	k -class and Double k -class Estimators	119
2.7	Distribution of LM Derived Estimators	120
2.8	Properties of Specification Tests	122
2.8.1	Single Equation 2SLS	122
2.8.2	Systemwide 2SLS and 3SLS	131
2.8.3	Relation to Hausman's Test	136
	Questions and Problems	139
Appendix to Chapter 2		141
	Convergence of Second Moment Matrices	141
	Convergence for Dependent Sequences	144
	Preliminaries and Miscellaneous	144
	Convergence of Second Moments of Final Form Errors	147
3	Maximum Likelihood Methods I	153
3.1	Introduction	153
3.2	The Identification Problem	154
3.2.1	Generalities	154
3.2.2	The Simple Supply-Demand Model	155
3.2.3	Identification by Exclusion Restrictions	157
3.2.4	Identification by Linear Restrictions	166
3.2.5	Identification and the Reduced Form	171
3.2.6	Covariance and Cross Equation Restrictions	177
3.2.7	A More General Framework	182

3.2.8	Parametric Nonlinearities and Identification	194
3.3	ML Estimation of the RF	196
3.3.1	General Discussion and ILS	196
3.3.2	Estimation of the Reduced Form	199
3.4	FIML Estimation	201
3.5	Simplified FIML Estimators	203
3.6	Properties of Simplified Estimators	208
3.6.1	Consistency	208
3.7	Limiting Distribution of FIML	212
	Questions and Problems	220
4	LIML Estimation Methods	223
4.1	The “Concentrated” Likelihood Function	223
4.1.1	A Subset of m^* Structural Equations	223
4.2	The Single Equation LIML Estimator	230
4.3	Consistency of the LIML Estimator	234
4.4	An Interesting Interpretation of LIML	238
4.5	Indirect Least Squares (ILS)	239
4.6	Relation of LIML to Other Estimators	246
4.7	Limiting Distribution of LIML Estimators	248
4.8	Classic Identifiability Tests	249
	Questions and Problems	256
	Appendix to Chapter 4	257
	Limiting Distribution of $(T\hat{\lambda} - 1)$	257
5	Nonlinear ML Methods	263
5.1	Motivation	263
5.2	A Mathematical Digression	264
5.3	Aspects of Likelihood Functions	268
5.3.1	An Interesting Inequality	269
5.4	Fisher Information	269
5.4.1	Alternative Representation of the Information Matrix	273
5.5	The Cramer-Rao Bounds	274
5.6	Martingale Properties of Likelihood Functions	277
5.7	Kullback Information	279
5.8	Convergence a.c. of ML Estimators	281
5.8.1	Independent Observations	285
5.8.2	Generalizations	291
5.9	The General Nonlinear Model (GNLM)	299
5.9.1	Consistency	299
5.9.2	Identification	303
5.9.3	Asymptotic Normality	304
5.10	The GNLM with Restrictions	310

5.11	Tests of Restrictions	314
5.11.1	Generalities	314
5.11.2	The Conformity Test	315
5.11.3	The Likelihood Ratio Test	316
5.11.4	The Lagrange Multiplier Test	317
5.11.5	Equivalence of the Three Tests	317
	Questions and Problems	318
6	Topics in NLSE Theory	321
6.1	Nonlinear ML	321
6.1.1	Identification	323
6.1.2	Consistency of the ML Estimator	325
6.1.3	Limiting Distribution of ML Estimators	336
6.1.4	Relation of Structural and Covariance Parameter (ML) Estimators	342
6.1.5	Estimators in Structurally Misspecified Models	348
6.2	Nonlinear 2SLS	352
6.2.1	Identification and Consistency of NL2SLS	354
6.2.2	Asymptotic Normality of NL2SLS	357
6.2.3	Choice of an Optimal NL2SLS Estimator	359
6.3	Nonlinear 3SLS	361
6.3.1	Identification and Consistency of NL3SLS	363
6.3.2	Asymptotic Normality of NL3SLS	364
6.3.3	Optimum NL3SLS and Computational Aspects	366
6.4	GMM	368
6.4.1	Reformulation of GMM as NL2SLS and NL3SLS	368
6.4.2	Identification and Consistency	371
6.4.3	Asymptotic Normality	372
6.4.4	Tests of Restrictions	376
6.5	Causality and Related Issues	378
6.5.1	Introduction	378
6.5.2	Basic Concepts	379
	Questions and Problems	383
	Bibliography	387
	Index	395

Contents of Volume I

Preface	xi
1 Mathematical Foundations	1
1.1 Introduction	1
1.2 Sets and Set Operations	2
1.3 Limits of Sequences	4
1.4 Measurable Spaces, Algebras and Sets	10
1.5 Measures and Probability Measures	18
1.5.1 Measures and Measurable Functions	18
1.6 Integration	26
1.6.1 Miscellaneous Convergence Results	43
1.7 Extensions to Abstract Spaces	52
1.8 Miscellaneous Concepts	64
2 Foundations of Probability	74
2.1 Discrete Models	74
2.2 General Probability Models	77
2.2.1 The Measurable Space $(R^n, \mathcal{B}(R^n))$	77
2.2.2 Specification of Probability Measures	82
2.2.3 Fubini's Theorem and Miscellaneous Results	92
2.3 Random Variables	97
2.3.1 Generalities	97
2.3.2 Random Elements	101

2.3.3	Moments of Random Variables and Miscellaneous Inequalities	104
2.4	Conditional Probability	110
2.4.1	Conditional Probability in Discrete Models	110
2.4.2	Conditional Probability in Continuous Models	120
2.4.3	Independence	125
3	Convergence of Sequences I	133
3.1	Convergence a.c. and in Probability	133
3.1.1	Definitions and Preliminaries	133
3.1.2	Characterization of Convergence a.c. and Convergence in Probability	140
3.2	Laws of Large Numbers	152
3.3	Convergence in Distribution	154
3.4	Convergence in Mean of Order p	156
3.5	Relations Among Modes of Convergence	161
3.6	Uniform Integrability and Convergence	167
3.7	Criteria for the SLLN	177
3.7.1	Sequences of Independent Random Variables	177
3.7.2	Sequences of Uncorrelated Random Variables	190
4	Convergence of Sequences II	194
4.1	Introduction	194
4.2	Properties of Random Elements	196
4.3	Base and Separability	200
4.4	Distributional Aspects of R.E.	208
4.5	Independence for Random Elements	209
4.6	Distributions of Random Elements	210
4.7	Moments of Random Elements	212
4.8	Uncorrelated Random Elements	216
4.9	Laws of Large Numbers for R.E.	218
4.9.1	Preliminaries	218
4.9.2	WLLN and SLLN for R.E.	219
4.10	Convergence in Probability for R.E.	222
4.11	Weak Convergence	223
4.11.1	Preliminaries	223
4.11.2	Properties of Measures	226
4.11.3	Determining Classes	231
4.11.4	Weak Convergence in Product Space	233
4.12	Convergence in Distribution for R.E.	235
4.12.1	Convergence of Transformed Sequences of R.E.	238
4.13	Characteristic Functions	245
4.14	CLT for Independent Random Variables	256

4.14.1	Preliminaries	256
4.14.2	Characteristic Functions for Normal Variables	258
4.14.3	Convergence in Probability and Characteristic Functions	260
4.14.4	CLT for <i>i.i.d.</i> Random Variables	262
4.14.5	CLT and the Lindeberg Condition	264
5	Dependent Sequences	277
5.1	Preliminaries	277
5.2	Definition of Martingale Sequences	279
5.3	Basic Properties of Martingales	282
5.4	Square Integrable Sequences	284
5.5	Stopping Times	289
5.6	Upcrossings	304
5.7	Martingale Convergence	306
5.8	Convergence Sets	310
5.9	WLLN and SLLN for Martingales	320
5.10	Martingale CLT	322
5.11	Mixing and Stationary Sequences	337
	5.11.1 Preliminaries and Definitions	337
	5.11.2 Measure Preserving Transformations	341
5.12	Ergodic Theory	343
5.13	Convergence and Ergodicity	348
5.14	Stationary Sequences and Ergodicity	354
	5.14.1 Preliminaries	354
	5.14.2 Convergence and Strict Stationarity	356
	5.14.3 Convergence and Covariance Stationarity	358
5.15	Miscellaneous Results and Examples	365
	Bibliography	371
	Index	373
