List of Tables	x
Foreword	xi
<i>Elisabeth Noelle-Neumann</i>	
Preface	xiii

PART ONE

The Historical and Political Context of the Discussion Surrounding the Public Understanding of Science and Technology

Introduction	3
<i>Meinolf Dierkes and Claudia von Grote</i>	
1. Why Should the Public 'Understand' Science? A Historical Perspective on Aspects of the Public Understanding of Science	7
<i>Ulrike Felt</i>	
2. The "Science Wars" and American Politics	39
<i>Sheila Jasanoff</i>	
3. From Northern to Southern Europe—Political Motivations Behind Recent Discourse on the "Public Understanding of Science"	61
<i>Maria Eduarda Gonçalves</i>	

PART TWO

Comparative Analysis: Results of and Reflections on Surveys as Methodological Instruments

Introduction	77
<i>Meinolf Dierkes and Claudia von Grote</i>	
4. Civic Scientific Literacy and Attitude to Science and Technology: A Comparative Analysis of the European Union, the United States, Japan, and Canada	81
<i>Jon D.Y. Miller and Rafael Pardo</i>	
5. Two Cultures of Public Understanding of Science and Technology in Europe	131
<i>John Durant, Martin Bauer, George Gaskell, Cees Midden, Miltos Liakopoulos, and Liesbeth Scholten</i>	

6. "Science in the Media" as a Cultural Indicator: Contextualizing Surveys with Media Analysis	157
<i>Martin Bauer</i>	
7. Studying Public Perception of Biotechnology: Helicopter or Microscope?	179
<i>Anneke M. Hamstra</i>	

PART THREE

"Science" and "The Public"—Revised Concepts

Introduction	203
<i>Meinolf Dierkes and Claudia von Grote</i>	
8. Understanding "Publics" in the Public Understanding of Science	205
<i>Edna F. Einsiedel</i>	
9. What Does Science mean in the "Public Understanding of Science"	217
<i>Steven Yearley</i>	
10. Against Linearity—On the Cultural Appropriation of Science and Technology	237
<i>Knut H. Sørensen, Margrethe Aune, and Morten Hatling</i>	

PART FOUR

Informing the Public and Debating Science and Technology

Introduction	261
<i>Meinolf Dierkes and Claudia von Grote</i>	
11. From Information to Attitudes? Thoughts on the Relationship Between Knowledge about Science and Technology and Attitudes Toward Technologies	265
<i>Hans Peter Peters</i>	
12. Information's Role in the Introduction and Social Regulation of New Biotechnologies	287
<i>Erling Jelsøe</i>	
13. A Public Explosion: Big-Bang Theory in the U.K. Daily Press	313
<i>Massimiano Bucchi</i>	

CONCLUSION

14. Public Understanding of Science and Technology: State of the Art and Consequences for Future Research	341
<i>Claudia von Grote and Meinolf Dierkes</i>	
List of Authors	363
Index of Persons and Institutions	367
Subject Index	373

List of Figures

Figure	Page
4-1. Item response curve	89
4-2. A stratified model of policy formulation	107
4-3. A path model to predict attitudes toward government spending for basic scientific research, European Union, 1992	120
4-4. A path model to predict attitudes toward government spending for basic scientific research, United States, 1995	120
4-5. A path model to predict attitudes toward government spending for basic scientific research, Japan, 1991	121
4-6. A path model to predict attitudes toward government spending for basic scientific research, Canada, 1989	121
5-1. Relation between the level of public scientific knowledge and the level of industrialization in the European Community	141
5-2. Relation between level of public interest in science and level of industrialization in the European Community	143
5-3. The industrialization paradox in the European Community: The relation between industrialization and the accommodation to science and technology	146
6-1. Overall trend in science news in the postwar British press	166
6-2. Standardized ratings of the "valuation tone" of science news	167
6-3. Coverage of academic fields of investigation in the postwar popular British press	168
6-4. Annual percentages of stories containing a risk-and-benefit, a risk-only, or a benefit-only argument in British science news ...	170
7-1. Product profile: Public evaluation of pork genetically engineered to reduce the level of pork fat	192
7-2. Product profile: Public evaluation of an insecticide-producing tomato	193
11-1. Post-Chernobyl empirical relationships in Germany (1987) between level of knowledge about and attitudes toward the use of nuclear power	270
11-2. Empirical relationships between knowledge level about and attitudes toward construction of an incineration plant as measured in the local populations close to a planned site (first wave results, November 1989)	271
11-3. Empirical relationships between knowledge level about and attitudes toward construction of an incineration plant as measured in the local population close to a planned site (second wave results, November – December, 1990)	272

List of Tables

Table	Page
4-1. Common Vocabulary Construct Items	88
4-2. IRT Parameters for Basic Scientific Construct Items	90
4-3. Percentage of Adults Estimated to be Scientifically Literate	99
4-4. Mean Scores on the Index of Issue Interest Scores	102
4-5. Percentage of Adults Attentive to (Attn) or Interested in (Int) Science and Technology Policy	104
4-6. Confirmatory Factor Analysis of Attitudes, European Union, 1992	110
4-7. Confirmatory Factor Analysis of Attitudes, United States, 1995 ..	111
4-8. Confirmatory Factor Analysis of Attitudes, Japan, 1991	112
4-9. Confirmatory Factor Analysis of Attitudes, Canada, 1989	113
4-10. Mean Scores on the Index of Scientific Promise	115
4-11. Mean Scores on the Index of Scientific Reservation	116
4-12. Percentage of Sample Agreeing that Government Should Support Basic Scientific Research	119
4-13. The Estimated Total Effects of Different Variables on the Prediction of Attitude toward Support for Basic Research	123
5-1. The Hypothetical Transition from Industrial to Postindustrial Society	138
5-2. Indicators of Public Perceptions of Science and Technology	140
5-3. Testing the Industrialization Hypothesis: The Relation between Knowledge and Attitudes	142
5-4. Relation between Industrialization and Public Views of Science	146
6-1. Cycles of Science Coverage in the British Press, 1946–1990	165
7-1. Attitudes toward the Genetic Engineering of Different Organisms for Food Production: Percentage of Respondents in Each Answering Category	189
7-2. Mean (<i>M</i>) Levels and Standard Deviations (<i>SD</i>) of Social Acceptance (<i>SA</i>) and Willingness to Try (<i>WT</i>): Eight Food Products Made with the Help of Genetic Engineering	190
7-3. Eight Aspects (and the Statements as Used in the Survey) that are Significantly Related to Total Evaluation (Social Acceptance and Willingness to Try) of Products	192
11-1. Perceptions and Attitude Processes: Hypotheses about Potentially Relevant Differences Between Scientific Experts and Laypeople	280
11-2. A Local German Community's Perceptions of Experts, 1990	282
