Preface xi

Préface xiii

Introduction xv
Teodor Gabriel Crainic and Gilbert Laporte

1
EXACT SOLUTION OF THE VEHICLE ROUTING PROBLEM 1
Paolo Toth, Daniele Vigo

1.1 Introduction 1
1.2 Problem Definition and Notation 3
1.3 Basic Reduction Rules 5
1.4 The Asymmetric CVRP 6
1.5 Branch-and-Bound Algorithms for the Symmetric CVRP 15
1.6 Branch-and-Cut Algorithms for the Symmetric CVRP 20
1.7 The Set Partitioning Approach 24
1.8 Conclusions 27

References 28

2
METAHEURISTICS IN VEHICLE ROUTING 33
Bruce L. Golden, Edward A. Wasil, James P. Kelly, I-Ming Chao

2.1 Introduction 33
2.2 Overview of Three Metaheuristics 34
2.3 Computational Experience 39
2.4 Large-Scale Vehicle Routing Problems 50
2.5 Future Directions in Vehicle Routing Research 53

References 54

3
A UNIFIED FRAMEWORK FOR DETERMINISTIC TIME CONSTRAINED VEHICLE ROUTING AND CREW SCHEDULING PROBLEMS 57
Guy Desaulniers, Jacques Desrosiers, Irina Ioachim, Marius M. Solomon, François Soumis, Daniel Villeneuve
3.1 Introduction 57
3.2 Relations between Time Constrained Problems 59
3.3 A Unified Formulation 68
3.4 Solution Methodology 72
3.5 Conclusion 86
References 87

4
THE INVENTORY ROUTING PROBLEM 95
Ann Campbell, Lloyd Clarke, Anton Kleywegt, Martin Savelsbergh
4.1 Introduction 95
4.2 The Inventory Routing Problem 96
4.3 The Single Customer Problem 97
4.4 The Two-Customer Problem 99
4.5 Solution Approaches 102
4.6 Solution Approaches under Investigation 105
4.7 Practical Issues 110
4.8 Test Problems 112
References 112

5
DYNAMIC VEHICLE ROUTING AND DISPATCHING 115
Michel Gendreau, Jean-Yves Potvin
5.1 Introduction 115
5.2 Dial-a-Ride Problems 118
5.3 Repair and Courier Services 120
5.4 Express Mail Delivery 122
5.5 Concluding Remarks 123
References 124

6
ON LANGUAGES FOR DYNAMIC RESOURCE SCHEDULING PROBLEMS 127
Warren B. Powell
6.1 Introduction 127
6.2 The Language of Applications 130
6.3 A Representation Language 135
6.4 A Mathematical Language 138
6.5 A Software Language 150
6.6 A Modeling Process 155
References 157

7
SOLVING STOCHASTIC ROUTING PROBLEMS 159
Gilbert Laporte, François V. Louveaux
7.1 Introduction 159
7.2 Formulation 160
7.3 The Integer L-Shaped Method 162
7.4 Implementation and Results 163
7.5 Conclusion 166

References 166

8
CREW SCHEDULING IN AIR TRANSPORTATION 169
Guy Desaulniers, Jacques Desrosiers, Michel Gamache, François Soumis
8.1 Introduction 169
8.2 A Variety of Crew Scheduling Problems 170
8.3 A Unified Formulation for Air Crew Scheduling Problems 172
8.4 Solution Methodology 174
8.5 Computational Results 178
8.6 Conclusion 183

References 184

9
PATH, TREE AND CYCLE LOCATION 187
Martine Labbé, Gilbert Laporte, Inmaculada Rodríguez-Martín
9.1 Introduction 187
9.2 Notations and Formulations 189
9.3 Paths with Fixed End Points (P_{o-d}) 194
9.4 Paths without Fixed End Points (P) 196
9.5 Trees 196
9.6 Cycles with an Origin (C_o) 199
9.7 Cycles without a Fixed Origin (C) 200
9.8 Conclusion 202

References 202

10
PARALLEL METAHEURISTICS 205
Teodor Gabriel Crainic, Michel Toulouse
10.1 Introduction 205
10.2 Parallel Metaheuristics 206
10.3 Type 1: Low-Level Parallelization 208
10.4 Type 2: Parallelization by Domain Decomposition 214
10.5 Type 3: Multiple Search Strategies 220
10.6 Conclusions and Perspectives 233

References 235
