II.	The Intelligent Enterprise	43
III.	The intra-corporate Wassermann Supply Chain Philosophy	53
1.	Objectives of the intelligent enterprise	53
2.	The tasks	55
3.	The basic elements of the Wassermann Supply Chain Philosophy	56
3.1	The human element at the heart of things	56
3.2	The efficiency rule	56
3.3	The 20/80 rule	57
3.4	The simulation concept	58
4.	Revenue and time-saving potentials within supply chains	59
5.	An incredibly profitable vision	65
5.1	The proactive harmonization of resources	68
5.2	The continuous reduction of throughput times	68
5.3	Quintessence for a profitable enterprise	69
5.4	The backlog-free performance process	69
6.	Actual Situation: the performance process riddled with bottlenecks and waste	71
6.1	Cause 1: No one feels responsible	72
6.2	Cause 2: The inaccuracy of basic data	76
6.3	Cause 3: Imminent bottlenecks are not identifiable	77
6.3.1	The fatal consequence of backlog	78
6.3.2	The unrealistic logic in planning of most ERP systems	82
7.	Professional Planning and Control	92
7.1	Supply chain management	92
7.2	Visualization of the supply chain	104
7.3	Requirements for realistic and feasible planning	106
7.3.1	Supply chain simulation	110
7.3.2	Bottleneck workplaces	121
7.3.3	Primary data for the supply chain simulation	125
7.3.4	Output of the Supply Chain Simulation	129
7.4	Intelligent planning and control	133
7.4.1	Complete resource harmonization	134
7.4.2	Guaranteed on-time, feasible work on hand	136
7.4.3	Paperless control	138
7.4.4	Snow and rain events	138
7.4.5	Simple acknowledgment	139
7.4.6	The unnecessary electronic control station	139
7.4.7	Accurate planning and scheduling for your suppliers	140
7.4.8	Trigger production documents	140
7.4.9	Expert groups in a customer/supplier relationship	140
7.4.10	Your process drivers react immediately to changing market demands	142

8.	The proactive delivery and inventory policy	145
8.1	Reasons of excessive capital tie-up	146
8.1.1	Throughput times which are much too long	146
8.1.2	The performance process that has yet to be harmonized	146
8.1.3	The unspecific, overreaching sales plan	147
8.1.4	The supposedly economic lot sizes	147
8.1.4.1	The misinterpretation of economic manufacturing lots	149
8.1.4.2	The misinterpretation of economic procurement lots	149
8.1.4.3	Economic lot sizes and their negative effect on processes	151
8.1.5	Safety thinking and safety stocks	153
8.2	Achieving lower inventory levels	154
8.2.1	Short throughput times	154
8.2.2	The performance process without backlog	154
8.2.3	Short-term sales planning	154
8.2.4	Active inventory management	154
8.2.4.1	The inventory required for operations	155
8.2.4.2	Market-oriented safety stocks	157
8.2.4.3	Safety times and service categories	158
8.2.4.4	Inventory caused by lot sizes	159
8.2.4.5	Actual bottleneck workplaces and their lot sizes	160
8.2.4.6	You determine your maximum inventory levels and your readiness to delivery on your own	161
8.2.4.7	Identifying unnecessary inventory	164
8.3	Analyses, management figures, immediate action plan	165
8.3.1	The ABC/XYZ analysis on consumption behavior	165
8.3.2	Rate of inventory turns	167
8.3.3	Scope analysis	168

8.3.5	Inventory in backlog	170
8.3.6	Inventory without demand	171
8.3.7	"Buffer time" potential	171
8.3.8	Inactive inventory analysis	172
8.3.9	The value of orders not delivered on time	172
8.3.10	Scope of approved manufacturing work orders	173
8.3.11	Throughput times and added value	173
8.4	Finding a suitable dispatching type	173
8.4.1	Minimum inventory	174
8.4.2	Stochastic demand determination	174
8.4.3	Deterministic demand assessment	176
8.4.4	Heuristic planning and scheduling by the managing clerk (dispatcher)	176
8.4.5	Selecting the suitable type of dispatching	177
9.	Sales planning close to the market	180
9.1	Sales planning	180

9.2	Forecast correction	181
9.3	The ideal sales plan	182
9.4	The profit-maximizing sales plan	183
9.4.1	Problem solution	183
9.4.2	The solution for profitable sales planning	185
9.4.3	Sales implements the profitable sales plan	186
9.4.4	Enhanced forecasts at several stages of production	186
10.	Deliver faster with less capital tie-up	188
10.1	The concept of storage levels	188
10.2	The simplest route to storage levels	189
11.	Moving rapidly from the product concept to production readiness	192
11.1	Planning and control	193
11.2	Process-compliant design	194
12.	The material flow simulation	196
13.	Realizing a low break-even point	198
13.1	The first step	199
13.2	Make market economy a part of your company	199
13.3	Strategic purchasing goes to work	199
