

Table of contents

1. PROMOTING LUNG HEALTH	9
1.1 What does it mean to promote lung health?	9
1.1.1 <i>Understanding health</i>	
1.1.2 <i>What is lung health?</i>	
1.1.3 <i>How can we promote lung health?</i>	
1.2 What is research and why is it important?	11
1.3 How are research priorities established?	11
1.3.1 <i>How frequent is the condition relative to other conditions?</i>	
1.3.2 <i>What is the degree of disability or dysfunction due to the condition?</i>	
1.3.3 <i>Are there cost-effective means to cure, control or prevent lung diseases?</i>	
2. EPIDEMIOLOGY, A BASIC SCIENCE FOR LUNG HEALTH	15
2.1 What is epidemiology and how is it used?	15
2.1.1 <i>History</i>	
2.1.2 <i>Definitions</i>	
2.1.3 <i>The nature of epidemiological research</i>	
2.2 Applications of epidemiology	18
2.2.1 <i>Measuring the health of a population</i>	
2.2.2 <i>Describing the natural history of disease</i>	
2.2.3 <i>Discovering the determinants of disease</i>	
2.2.4 <i>Controlling and preventing disease</i>	
2.2.5 <i>Planning and evaluating health services</i>	
2.3 Understanding association and causation	20
2.3.1 <i>What is Association?</i>	
2.3.2 <i>What is Causation?</i>	

3. GETTING STARTED IN RESEARCH 23

3.1 The research protocol..... 23

 3.1.1 *Why focus on the research protocol?*

 3.1.2 *Typical format and elements of the research protocol*

3.2 Deciding what to study: The research question 32

 3.2.1 *Basic concepts in framing a research question*

 3.2.2 *Points to consider when choosing a research question*

4. STRUCTURING RESEARCH: STUDY DESIGN 35

4.1 Study design: its relation to the development of medical knowledge 35

4.2 Overview of study architecture..... 37

4.3 Study design details 37

 4.3.1 *Descriptive studies*

 4.2.2 *Analytic studies*

 4.2.3 *Experimental (intervention) studies*

5. THE SUBJECT OF RESEARCH: SELECTING A POPULATION 51

5.1 Defining a population to study 51

5.2 Selecting a sample 52

 5.2.1 *Definitions and procedures*

 5.2.2 *How do I select the sample?*

 5.2.3 *How do I ensure that wrong conclusions are not drawn?*

5.3 Deciding how big the study population should be 55

 5.3.1 *Why is the size of the study important?*

 5.3.2 *What information is needed to determine the size of the study?*

 5.3.3 *How do I do a sample size calculation using these factors?*

6. MEASUREMENT IN EPIDEMIOLOGY	63
6.1 General principles	63
6.1.1 Principles of collecting information (data)	
6.1.2 Types of data	
6.1.3 Instruments to measure states or characteristics (collect data)	
6.1.4 Problems with measurement	
6.2 Counting diseases and measuring health	67
6.2.1 Sources of information	
6.2.2 Studies of mortality	
6.2.3 Studies of morbidity	
6.3 Use and design of a questionnaire	73
6.3.1 Principles of questionnaire design	
6.3.2 Content of the questionnaire	
6.4 Measuring exposure	77
6.4.1 Recording or measuring environmental exposure	
6.4.2 Instruments for collecting exposure information	
6.4.3 Choosing an exposure assessment method	
6.5 Reporting morbidity or mortality	81
6.5.1 Calculation of rates	
6.5.2 Indices of risk	
7. CONDUCTING RESEARCH	
PRACTICAL STEPS	85
7.1 Project Execution: your protocol has been accepted for funding – what now?	85
7.1.1 The research plan	
7.1.2 Controlling the quality of procedures and techniques	
7.1.3 Ensuring efficiency	

7.2 Managing the information collected	89
7.2.1 <i>Checking original data collection forms and records</i>	
7.2.2 <i>Coding data</i>	
7.2.3 <i>Entering data into computer files</i>	
7.2.4 <i>Checking computer files</i>	
7.2.5 <i>Handling missing data</i>	
8. INTERPRETING RESULTS	97
8.1 Ensuring that the results are valid	97
8.1.1 <i>Definitions</i>	
8.1.2 <i>Error and bias in sampling study populations</i> <i>(selection biases)</i>	
8.1.3 <i>Error and bias in measurement (information biases)</i>	
8.1.4 <i>Assessment of the error inherent in a test or instrument</i>	
8.1.5 <i>Confounding (a special kind of selection bias)</i>	
8.2 Making sense of the results - Data Analysis	105
8.2.1 <i>Getting acquainted with the data</i>	
8.2.2 <i>Approaches to statistical analysis</i>	
8.2.4 <i>Statistical tests for comparing discrete variables</i> <i>between groups</i>	
8.2.5 <i>Statistical tests relevant for continuous measures:</i> <i>compared across 2 or more groups</i>	
8.2.6 <i>Statistical tests relevant for continuous measures:</i> <i>association between 2 measures</i>	
8.2.7 <i>Statistical tests that consider comparisons,</i> <i>while "controlling" for other variables</i>	
8.2.8 <i>Other issues in statistical analyses</i>	
8.3 Reporting the results	124
8.3.1 <i>Preparing a report of the research</i>	
8.3.2 <i>Writing a scientific paper</i>	

9. OTHER ISSUES IN RESEARCH	129
9.1 Who owns the research?	129
9.1.1 <i>Structuring responsibility</i>	
9.1.2 <i>Addressing perceived needs</i>	
9.1.3 <i>Ensuring follow up of the results</i>	
9.2 Getting support for research	130
9.2.1 <i>Local sources</i>	
9.2.2 <i>International Sources</i>	
9.3 Ethical issues in research	133
9.3.1 <i>Basic principles</i>	
9.3.2 <i>Principles relevant to sponsored research in low-income countries</i>	
9.3.3 <i>Appropriate structures for ethics review</i>
