Preface	V
1 Introduction	1
1.1 Chemical Sensors as Alternative Analytical Tools	1
1.2 The Concept of Chemical and Biochemical Sensors	6
1.3 Recognition Processes and Sensor Technology: Milestones	10
1.4 Goals for Future Developments and Trends	13
1.4.1 Trends	13
1.4.2 Miniaturization, Nanotechnology	16
1.4.3 <i>In Vivo</i> and <i>In Situ</i> Monitoring	21
1.4.4 The Analytical Laboratory in the 21 st Century	25
References	27
2 Chemical and Biochemical Sensors	33
2.1 Classification, Specification, and Nomenclature of Chemical Sensors	33
2.2 Molecular Recognition Processes for Ions and Neutral Species	38
2.2.1 Introduction	38
2.2.2 Molecular Interactions: Tools and Calculations	41
2.2.3 Molecular Recognition of Ions	48
2.2.4 Hydrogen Bonds	56
2.2.5 Molecular Recognition of Enantiomers	58
2.2.6 Molecular Interactions within the Aqueous Medium	59
2.2.7 Catalysis by Enzymes, Enzyme Mimics and Host-Reactands	63
2.2.8 Catalytic Antibodies	70
2.2.9 Multitopic Recognition of Immunological Systems	71
2.2.10 Conclusions and Considerations for Ligand Design	74
References	76

3	Controlling Sensor Reactions	83
3.1	Thermodynamically Controlled Sensor Reactions:	
	Reversibility and Thermodynamic Equilibrium	83
3.1.1	The Chemical Potential and the Partition Equilibrium	83
3.1.2	The Recognition and Transduction Process	93
3.1.3	The Electrochemical Potential and the (Potentiometric) Sensor Response	100
3.2	Thermodynamics of Nonequilibria:	
	Diffusion and Steady-State	104
3.3	Rate Controlled Sensor Reactions:	
	Mediated Enzyme Reactions	106
3.4	Nonthermodynamic Assumptions	114
3.4.1	Activity Versus Concentrations	114
3.4.2	Ionic Strength and Estimates of Activity Coefficients	118
3.4.3	Activity and Concentration of an Electrolyte: IFCC / IUPAC Definitions	121
3.4.4	The Osmotic Coefficient	124
3.4.5	Calibration, Standardization, and Comparison with Definitive or Reference Procedures	127
3.4.6	The Liquid Junction Potential under Physiological Conditions	134
	References	136
4	The Artificial Analyte-Selective Membrane – Limitations, Technological Precautions and Developments	139
4.1	Introduction	139
4.2	Types of Membranes and Membrane Models	140
4.2.1	The Biological Membrane	140
4.2.2	Artificial Membranes	144
4.3	The Selectivity Coefficient	155

4.4	The Membrane Composition and the Membrane Medium	161
4.4.1	The Influence of the Permittivity and of Plasticizers	162
4.4.2	The Effect of Electron Pair Donor (EPD) and Acceptor (EPA). Properties of Solvents. Solubilization Properties of the Membrane	169
4.4.3	The Influence of the Aqueous Sample Environment	170
4.4.4	The Influence of the Surface Tension	172
4.4.5	The Effect of Lipophilic Anionic Sites	173
4.4.6	The Effect of the Ligand Concentration	176
4.5	Response Behavior, Sensitivity and Detection Limit	179
4.6	Lifetime, Lipophilicity, and Immobilization	182
4.7	Interactions by the Biological Matrix and Precautions	183
4.7.1	Biocompatibility	183
4.7.2	Possible Mechanism of Protein Adsorption	185
4.7.3	Influence of Thrombocytes on Solvent Polymeric Membranes	188
4.7.4	The Donnan Potential	188
4.7.5	The Influence of Anticoagulants	191
	References	193

5 Potentiometric Chemical Sensors and Biological Applications 199

5.1	Principles of Ion-Selective Electrodes	199
5.2	The Symmetric Potentiometric Cell	203
5.2.1	The Asymmetry of ISE Membranes and Reference Electrodes	205
5.2.2	Analysis During Hemodialysis	211
5.2.3	How About Human Whole Blood?	214
5.3	The Magnesium-Selective Electrode	215
5.3.1	Characteristics of the Magnesium Ion	217
5.3.2	Analytical Techniques	217
5.3.3	Natural Carriers	222
5.3.4	Synthetic Carriers	225
5.3.5	Applications	237
5.3.6	Stop-Flow Analysis, the Continuous Flow System	239
5.3.7	Significance of Magnesium-Selective Assays	240
5.4	Microelectrodes for Intracellular Measurements	242
5.4.1	The Nitrite-Selective Microelectrode	245

5.5	Miniaturized pH Probe for Intraluminal Monitoring of Gastric Juice	246
5.6	Chloride-Selective Measurements in Blood Serum and Urine	248
	References	253
6	Optical Sensors, Optodes	259
6.1	Introduction and Medical Applications	259
6.2	Sensors Based on Intrinsic Optical Effects of the Target Compound	260
6.2.1	Sensors Based on Inherent Optical Characteristics of a Specific Analyte	260
6.2.2	Sensors Based on Inherent Optical Characteristics of a Host Responding to Analyte Quantity with an Optical Effect	261
6.3	Sensors Based on a Labeled Host Compound or a Labeled Competitive Analyte	269
6.4	Chemical Sensors Based on a Second Component: "Simon Optodes"	270
6.4.1	Chemical Principles of Operation	270
6.4.2	Optode Membranes for Cations	272
6.4.3	Optode Membranes for Anions	275
6.4.4	Optodes for Gases and Neutral Species	278
6.4.5	Principles of Reactions, Thermodynamic Equilibria and Response Functions	282
6.4.6	Medical Assays: Applications to Diluted Plasma	285
6.4.7	Analytical Performance Parameters	289
6.5	The Optical Transduction Process	299
6.5.1	Absorbance Measurements in Transmission Mode	299
6.5.2	Optical Transducing Elements Based on Multiple Internal Reflection (MIRE)	300
6.6	Trend to Miniaturized Integrated Optical Sensors (MIOS)	304
6.7	NIR-Absorbing Dyes	309
6.8	Conclusions: Electrodes versus Optodes, Possibilities of Neutral Substrates	312
	References	314

7	Data Validation and Interpretation	321
7.1	Introduction: What Does "Data" Mean? What Does "Information" Mean?	323
7.2	The Results of Analytical Tests: Random Numbers or Information Base?	323
7.2.1	Information, Interpretation, and Decision Making	323
7.2.2	What Does Information Mean?	325
7.2.3	The Bayesian Approach	330
7.2.4	General Validation of Clinical Tests and Analytical Results	331
7.2.5	ROC Analysis (Receiver Operating Characteristics)	334
7.2.6	The Likelihood Ratio	337
7.2.7	Multivariate and Clustering Procedure	339
7.3	Goals in Analytical and Clinical Chemistry	343
7.3.1	Analytical Errors and Biological Variation	344
7.3.2	The Biological Scattering Range as the Dynamic Range	348
7.3.3	Accuracy Assessment	352
7.3.4	Conclusions and Recommendations for Planning Diagnostic Tests	354
	References	355
	Appendices	359
Appendix 1:	Milestones in the Development of Chemical and Biochemical Sensors	359
Appendix 2:	Terminology for the Diagnostic Performance of a Test	361
Appendix 3:	Biological Setting Points for Electrolytes	363
Appendix 4:	Allowable Analytical Errors for Electrolytes in Medical Assays	365
Appendix 5:	Physicochemical Characteristics of the Five Biologically Important Cations	367
Appendix 6:	Structures and Physical Data of Plasticizers	369
Appendix 7:	Nomenclature and Molecular Masses of Plasticizers	373
Appendix 8:	Materials and Methods Used for Preparation of Ion-Selective Electrodes and Synthesis of Hydroxy-Poly(vinyl chloride)	376

Appendix 9: Required Logarithmic Selectivity Coefficients for Ion-Selective Electrodes	383
Appendix 10: Synthesis and Identity of the Ion-Selective Carriers ETH 7025, ETH 3832 and ETH 5506 used in this Work	387
Appendix 11: List of Structures and Selectivity Coefficients of Investigated Magnesium-Selective Ligands	392
Appendix 12: IUPAC Units and Statistical Considerations	401
Index	405
