Foreword by Jerome M. Siegel	vii
Preface	ix
Acknowledgments	xiii

1 A Brief Synopsis of Neuroanatomy	1
--	---

Part I The First Half-Century: The Groundwork for the Science of Sleep and Waking Is Laid

2 Technological Developments	9
Electroencephalography: Hans Berger	9
The EEG in Sleep and in Waking	14
The Stereotaxic Instrument: Victor Horsley and Robert Clarke	20
The Cathode Ray Oscilloscope: Joseph Erlanger and Herbert Gasser	24
3 Early Research on Brain Mechanisms of Sleep and Waking	27
Encephalitis Lethargica: Constantin von Economo	27
Two Surgical Preparations: Frederick Bremer	29
An Interruption at Midcentury: World War II	31

Part II The Second Half-Century: The Benefits Are Reaped

Section 1 The Waking Brain

4 The Discovery of the Ascending Reticular Activating System	35
5 The Neural Pathways That Produce Arousal	47

Section 2 The Sleeping Brain: Slow-Wave Sleep

6	Forebrain and Hindbrain Inhibition of the Reticular Activating System	55
7	EEG Synchrony and Behavioral Inhibition	61
	The Raphé Nuclei and Serotonin	61
	Thalamic Recruiting and Other Forms of Induced Slow Waves	62
	Behavioral Inhibition	70
	Sleep as Passive or Active Deactivation	73
8	Cellular Mechanisms and Neural Circuits That Produce Sleep	79
9	Sleep Factors	85
10	Sleep as a Circadian Rhythm	93

Section 3 The Dreaming Brain: REM and Paradoxical Sleep

11	The Discovery of REM Sleep	105
12	The Neural Control of REM Sleep	113

Part III The Functions and Disorders of Sleep and Waking

13	Theories of Sleep and Waking	129
	Evolutionary and Ontogenetic Observations on Sleep and Waking	129
	Sleep Deprivation Studies	136
	Sleep and Memory	144
14	Disorders of Sleep and Waking	155
	Insomnia and Sleep Apnea	158
	Sudden Infant Death Syndrome (SIDS)	161
	Narcolepsy	162
	References	171
	Abbreviations	185
	Glossary	187
	Index	199
