

Contents

Regulated Intramembrane Proteolysis – New Lessons from Lipid Metabolism and the Unfolded Protein Response <i>R.B. Rawson</i>	1
Notch Signaling in the Brain: More than Just a Developmental Story <i>N. Šestan and P. Rakic</i>	19
Control of Notch Activity by the Ubiquitin-Proteasome Pathway <i>N. Gupta-Rossi, O. Le Bail, Ch. Brou, F. Logeat, E. Six, and A. Israël</i>	41
A Presenilin-Dependent S3-Like γ -Secretase Cleavage of the β -Amyloid Precursor Protein <i>H. Steiner, M. Sastre, G. Multhaup, D.B. Teplow, and Ch. Haass</i>	59
New Non-Peptidic Inhibitors of γ -Secretase Abolish $A\beta$ Production Without Modifying Notch Cleavage <i>A. Petit, F. Bihel, C. Alves da Costa, O. Pourquié, Y.-H. Suh, J.-L. Kraus and F. Checler</i>	63
Presenilins, APP, and Notch: Proteolysis from Womb to Tomb <i>M.S. Wolfe, W.P. Esler, W.T. Kimberly, and D.J. Selkoe</i>	71
Missorting of the Dendritic Cell Adhesion Molecule Telencephalin in Presenilin-Deficient Neurons <i>C. Esselens, C. Boeve, V. Baert, G. Snellings, P. Cupers, K. Craessaerts, B. De Strooper and W. Annaert</i>	89
β APP Processing, its Biology and Alzheimer's Disease <i>L. D'Adamio</i>	101
Further Analysis of the Nicastrin: Presenilin Complex <i>F. Chen, G. Yu, S. Arawaka, M. Nishimura, T. Kawarai, H. Yu, A. Tandon, A. Supala, Y.Q. Song, E. Rogaeva, P. Milman, Ch. Sato, Ch. Janus, J. Lee, L. Song, L. Zhang, P.E. Fraser, and P.H. St George-Hyslop</i>	109

PS1 Interacts With and Facilitates β -Catenin Turnover
E.H. Koo, S. Soriano, and D.E. Kang 119

δ -Catenin, Presenilin, and the Synaptic-Adherens Junction Complex
K.S. Kosik, M. Medina, T. Ochiishi, M.C. Martinez, and Q. Lu 131

Vascular Smooth Muscle Cells Are the Primary Target
of the Events Leading from Notch3 Mutations
to CADASIL
*A. Joutel, F. Andreux, A. Francois, V. Domenga, F. Chapon,
C. Godfraind, and E. Tournier-Lasserre* 143
