Introduction 1

Aims of good patient
positioning 2

Medicolegal considerations 3

General considerations

Responsibility

Patient comfort

Patient dignity

Patient safety

Other considerations 6

Operating tables

Patient transfer

Securing the patient

Effect of patient position on the
circulation and respiration

Protection of important structures

Anaesthetic access

Surgical access

Ancillary theatre equipment

Theatre staff

Thromboembolic prophylaxis

Tourniquets

Diathermy

General surgery 23

Abdomen 24

Dorsal recumbent

Perineum 25

Lithotomy

Lloyd Davies

Jack-knife

Knee-chest (lateral or prone)

Kidney 30

Lateral kidney

Vascular 32

Neck and thyroid

Supine

Supine (knee flexed)

Supine (arm table)

Trendelenburg

Head and neck 37

Neck and thyroid

Breast 38

Supine (arm board)

Thorax 39

Supine

Lateral

Orthopaedics 43

Upper Limb 45

Shoulder 46

Beach-chair

Supine (intramedullary nailing)

Lateral

Arm (humerus and elbow) 49

Prone

Lateral

Supine (arm table)

Supine (arm over chest)

Forearm 55

Supine (arm table)

Supine (arm over chest)

Wrist and hand 57

Supine (arm table)

Lower limb 59

Pelvis 60

Supine

Hip 61

Supine (medial approach)

Supine (anterior and lateral approaches)

Lateral

Thigh (femur) 64

Supine (with traction)

Supine (without traction)

Lateral (with traction)

Lateral (without traction)

Knee 74

Supine (anterior and lateral approaches)

Supine (medial approach)

Supine (arthroscopy)

Leg (tibia and fibula) 80

Supine (with traction)

Supine (without traction)

Lateral

Ankle 86

Supine

Lateral

Prone

Foot 90

Supine

Spine 93

Cervical spine 95

Supine

Prone

Thoracic spine 98

Prone

Lateral

Lumbar spine 100

Prone

Lateral

Semi-lateral

Supine
