Section 1: Introductions	
1 The cognitive neuroscience of language: challenges and future directions	3
<i>Colin M. Brown and Peter Hagoort</i>	
1.1 Introduction	3
1.2 Complexity	4
1.3 Mapping language in the brain	6
1.4 Anatomical and functional variability	8
1.5 Future directions	9
2 Functional neuroimaging in cognitive neuroscience	15
<i>Michael D. Rugg</i>	
2.1 Introduction	15
2.1.1 Functional localization	16
2.1.2 Functional fractionation	17
2.1.3 Neural monitoring of cognitive function	18
2.2 Methods	18
2.2.1 Haemodynamic methods	18
2.2.1.1 PET	19
2.2.1.2 fMRI	21
2.2.2 Electrophysiological methods	24
2.2.2.1 ERPs	24
2.2.2.2 ERFs	26
2.2.3 Integrating haemodynamic and electrophysiological methods	27
2.3 Functional neuroimaging: general considerations	29
2.3.1 Null results	29
2.3.2 Functional dissociation	29
2.3.3 Functional significance	30
3 The representational structures of the language faculty and their interactions	37
<i>Ray Jackendoff</i>	
3.1 Introduction	37
3.2 The foundational observations	38
3.2.1 Combinatoriality	38
3.2.2 Acquisition of language	40

3.3	Phonological structure and its relation to syntax	43
3.4	The independence of semantic/conceptual structure from syntax	45
3.5	The tripartite parallel architecture	49
3.6	An example	50
	3.6.1 Phonological structure	52
	3.6.2 Syntactic structure	53
	3.6.3 Conceptual structure	54
3.7	Connecting the levels	56
3.8	Two more important syntactic phenomena	57
	3.8.1 Anaphora	58
	3.8.2 Long-distance dependencies	59
3.9	The lexicon	60
3.10	Regular versus irregular morphology	62
3.11	Representational modularity	65
3.12	The binding problem and short-term memory	67
3.13	Summary	70

4.1	Design by evolution	83
4.2	The blueprint	86
4.3	Conceptual preparation in context	89
	4.3.1 Macroplanning	90
	4.3.2 Microplanning	91
4.4	Grammatical encoding	94
	4.4.1 Lemma selection	95
	4.4.2 Syntactic composition	97
4.5	Morpho-phonological encoding	99
	4.5.1 Generating phonological words	99
	4.5.1.1 Accessing the morpho-phonological code	101
	4.5.1.2 Spelling out the phonological code	103
	4.5.1.3 Prosodification	105
4.6	Generating utterance prosody	106
	4.6.1 Generating phonological phrases	107
	4.6.2 Generating intonational phrases	108
4.7	Phonetic encoding and articulation	110
4.8	Self-monitoring	112
4.9	Conclusion: relevance for brain-imaging research	114
5	Comprehending spoken language: a blueprint of the listener	123
	<i>Anne Cutler and Charles Clifton, Jr.</i>	
5.1	Introduction	123
5.2	Decoding the signal	125
5.3	Finding the constituent parts	130
5.4	Activating lexical representations	133
	5.4.1 Concurrent activation and competition	134
	5.4.2 Segmental versus suprasegmental information	136

5.5 Retrieving lexical information	138
5.5.1 Morphological structure	139
5.5.2 Semantics	140
5.6 Interpreting the sequence	141
5.6.1 Processes common to listening and reading	142
5.6.2 Auditory sentence comprehension	143
5.6.2.1 Added challenges to the listener	144
5.6.2.2 Prosody in auditory sentence comprehension	145
5.7 The architecture of the listening system	151
5.7.1 Decoding, segmenting, and lexical processing	152
5.7.2 Word recognition and utterance context	153
5.7.3 Syntactic and semantic processing	154
6 Comprehending written language: a blueprint of the reader	167
<i>Charles A. Perfetti</i>	
6.1 Introduction	167
6.2 A blueprint of the reader	168
6.2.1 Writing system factors	168
6.2.2 Elementary reading processes in a representation account	170
6.2.3 Non-representational (emergent) accounts of identification	171
6.3 Issues in word identification	173
6.3.1 Routes to the lexicon	173
6.3.2 Phonological mediation	175
6.3.3 The time course of graphic, phonological, and semantic activation	177
6.3.4 Word meanings and word forms	180
6.4 Reading words in context	180
6.4.1 Word meaning activation and selection	180
6.5 Understanding sentences	182
6.6 Comprehension beyond sentences	186
6.6.1 Mental representations of text	186
6.6.2 Inferences build situations	188
6.7 Individual differences in reading	189
6.7.1 Problems in lexical orthographic-phonological processes	191
6.7.2 Problems in processing lexical meaning	193
6.7.3 Problems in processing syntax	194
6.7.4 Problems at the text level	196
6.8 Summary	197

Section 3: The neurocognitive architectures of language

7 The neural architecture underlying the processing of written and spoken word forms	211
<i>Cathy Price, Peter Indefrey, and Miranda van Turenhout</i>	
7.1 Introduction	211

7.2	Word production	212
7.2.1	Lemma retrieval and phonological encoding	213
7.2.2	Phonetic encoding and articulation	216
7.2.3	The time course of lexical retrieval in speech production	216
7.3	Spoken-word processing	218
7.3.1	Non-linguistic acoustic processing	218
7.3.2	Prelexical phonological processing	221
7.3.3	Lexical word-form selection	223
7.4	Written-word processing	224
7.4.1	Early visual processing	225
7.4.2	Prelexical orthographic processing	226
7.4.3	Orthographic word-form access versus sublexical orthography-to-phonology conversion	228
7.5	The semantic system	230
7.6	Final remarks	232
8	Clues to the functional and neural architecture of word meaning <i>Eleanor M. Saffran and Alexandra Sholl</i>	241
8.1	Introduction	241
8.2	Evidence from studies of semantic impairment	243
8.2.1	Abstract versus concrete	245
8.2.2	Category-specific semantic deficits	248
8.2.3	Impairments involving nouns or verbs	259
8.3	Evidence from studies of normal brain activity	260
8.3.1	PET and fMRI	260
8.4	Concluding remarks	262
9	The neurocognition of syntactic processing <i>Peter Hagoort, Colin M. Brown, and Lee Osterhout</i>	273
9.1	Introduction	273
9.2	Issues in syntactic processing	274
9.2.1	A single versus a dual processor for grammatical encoding and parsing	276
9.2.2	A modality-specific parser versus a modality-independent parser	277
9.2.3	General versus dedicated working-memory support for structure building	277
9.2.4	Structural precedence versus all cues are equal	278
9.2.5	Structural output versus semantic output	279
9.3	The microvolts of syntax: electrophysiological evidence	280
9.3.1	ERP evidence for functional components of syntactic processing	282
9.3.1.1	Left anterior negativities	284
9.3.1.2	P600/SPS	286
9.3.1.3	Topographical aspects of the P600/SPS	292
9.3.2	The implications of ERP effects for the neural architecture of parsing	294

9.4 Brain areas and syntax: evidence from lesions and PET/fMRI	296
9.4.1 Lesion studies	296
9.4.2 Haemodynamic studies	300
9.4.3 Conclusion	305
9.5 What to conclude and where to go?	305
Section 4: Language from a neurobiological perspective	
10 Broca's language area from a neuroanatomical and developmental perspective	319
<i>Harry B. M. Uylings, Lidia I. Malofeeva, Irina N. Bogolepova, Katrin Amunts, and Karl Zilles</i>	
10.1 Introduction	319
10.2 Localization of cortical areas for language	319
10.3 Broca's area	321
10.3.1 Neuroanatomical localization of Broca's area	321
10.3.2 Postnatal development of Broca's area	324
10.3.3 Variability in structure of areas 44 and 45 in the adult brain	329
10.4 Conclusions	331
11 Functional integration: methods for assessing interactions among neuronal systems using brain imaging	337
<i>Christian Büchel, Chris Frith, and Karl Friston</i>	
11.1 Introduction	337
11.2 Definitions	339
11.3 Functional connectivity	340
11.3.1 Eigenimages and spatial modes	340
11.3.2 Example: verbal fluency	341
11.4 Effective connectivity	343
11.4.1 A simple model	343
11.4.1.1 Results	345
11.4.1.2 Functional asymmetry in V2–V1 and V1–V2 modulatory connections	347
11.4.2 Structural equation modelling	347
11.4.2.1 Example: attention	350
11.4.3 Effective connectivity versus categorical comparisons	353
11.4.4 Conclusions	354
12 Current approaches to mapping language in electromagnetic space	359
<i>Marta Kutas, Kara D. Federmeier, and Martin I. Sereno</i>	
12.1 Introduction	359
12.2 Using neurobiological data to understand language processes	360
12.3 Electrochemical basis of neural communication	362
12.4 Relationship between EEG and MEG	365
12.5 Language-related ERP effects	365

12.6	Issues in ERP signal analysis	370
12.6.1	ERPs and the time course of processes	370
12.6.2	ERPs and functional independence	371
12.6.3	The value of multiple recording sites	371
12.6.4	Comparing ERP scalp distributions	373
12.6.5	The Laplacian or current source density	374
12.6.6	Extracting signals	376
12.7	Localizing ERP generators	377
12.7.1	Intracranial recordings	378
12.7.2	The forward solution	380
12.7.2.1	Head models	380
12.7.3	The inverse problem	382
12.8	The theoretical power of increased spatial resolution	384
	Index	393
