

# CONTENTS

Contributors	xiii
Preface	xvii

## PART I Overview

1. Laboratory and Evolutionary History of <i>Tetrahymena thermophila</i> <i>David L. Nanney and Ellen M. Simon</i>	
Summary	4
I. Characters in Search of a Script	4
II. Paramecium Precursors	8
III. <i>Tetrahymena</i> Breeding Studies	11
IV. Perils of Passage	16
V. Doing Genetics by Evolution	18
References	22
2. Cell Biology of <i>Tetrahymena thermophila</i> <i>Joseph Frankel</i>	
I. Introduction	28
II. Membranes and Membrane-Bounded Compartments	35
III. The Cytoskeleton and Membrane Skeleton	52
IV. Dynamics of the Cell Cycle	68
V. Spacial Patterning	79
VI. Starvation-Mediated Development	88
VII. Concluding Remarks	99
References	103
3. <i>Tetrahymena</i> Genetics: Two Nuclei Are Better Than One <i>Kathleen M. Karrer</i>	
I. Asexual and Sexual Reproduction	128
II. Nuclear Dualism	134
III. Special Features of <i>Tetrahymena</i> Genetics	150
IV. DNA-Mediated Transformation	163
V. Summary and Prospects	173
References	176

## PART II Methods

### 4. *Tetrahymena* as a Laboratory Organism: Useful Strains, Cell Culture, and Cell Line Maintenance

*Eduardo Orias, Eileen P. Hamilton, and Judith D. Orias*

I. Introduction	190
II. Useful <i>Tetrahymena</i> Strains	190
III. Culture Media	194
IV. Culturing <i>Tetrahymena</i> Cells	199
V. Cell Line Storage	202
References	208

### 5. Long-Term Storage

*Peter J. Bruns, Helen R. Smith, and Donna Cassidy-Hanley*

I. Introduction	213
II. Supplies	214
III. Preparation of Cells before Freezing	215
IV. Freezing	216
V. Thawing and Recovery	216
VI. Conclusion	217
References	217

### 6. Genetic Crosses: Setting Up Crosses, Testing Progeny, and Isolating Phenotypic Assortants

*Eileen P. Hamilton and Eduardo Orias*

I. Introduction	219
II. Methods for Mating Cells	220
III. How to Isolate and/or Select Progeny from a Cross	222
IV. Mating Type Tests and Sexual Immaturity Tests	225
V. Isolating Assortants	227
References	228

### 7. Methods for Genetic Analysis

*Peter J. Bruns and Donna Cassidy-Hanley*

I. Introduction	229
II. Reagents	230
III. Equipment	231
IV. Strains	234
V. Strategies	235
References	240

## 8. Isolation of Micronuclear and Macronuclear DNA

*Sally Lyman Allen*

I. Introduction	242
II. Cell Culture	243
III. Percoll Method for Isolation of Nuclei	244
IV. Isolation of High Molecular Weight DNA from Nuclei	247
V. Solutions	249
References	252

## 9. Genetically Sorting a Collection of *Tetrahymena* Mutants

*Eduardo Orias and Eileen P. Hamilton*

I. Introduction	253
II. Mapping the Mutations to Chromosome Arms	255
III. Genetic Complementation Tests	255
References	263

## 10. Genetically Mapping New Mutants and Cloned Genes

*Eileen P. Hamilton and Eduardo Orias*

I. Introduction	265
II. Genetically Mapping a Mutation	266
III. Genetically Mapping a Cloned Gene or Sequence	278
References	279

## 11. Selection of Motility Mutants

*David G. Pennock*

I. Introduction	281
II. Materials	282
III. Special Procedures and Equipment	283
IV. Strains	283
V. Inducing and Screening for Temperature-Sensitive Mutations Affecting Cilia Regeneration	283
VI. Mutagenesis by Targeted Gene Knockout	286
References	289

## 12. Nuclear and Cytoskeletal Fluorescence Microscopy Techniques

*K. R. Stuart and E. S. Cole*

I. Introduction	291
II. DAPI: A Fluorescent Nuclear Stain	292
III. Immunofluorescence Labeling for Conventional Fluorescence Microscopy	299
IV. Immunofluorescence Labeling for Confocal Fluorescence Microscopy	305
References	310

### 13. Nuclear and Cortical Histology for Brightfield Microscopy

*E. S. Cole and K. R. Stuart*

I. Introduction	313
II. Silver Staining	314
III. Protargol Staining	317
IV. Giemsa Staining	319
References	321

### 14. Fixation of *Tetrahymena* Cells for Electron Microscopy

*William Dentler*

I. Introduction	323
II. Cell Culture	324
III. Fixation	324
IV. Critical Point Drying for SEM	327
V. Embedding for TEM	328
VI. Staining Sections (TEM)	330
References	331

### 15. Immunoelectron Microscopy of *Tetrahymena*

*R. H. Gavin, John G. Hoey, and Jorge A. Garcés*

I. Introduction	334
II. General Considerations	334
III. Postembedding Labeling	336
IV. Double Labeling with the Postembedding Technique	338
V. Pre-embedding Labeling	340
VI. Controls for Immunogold Labeling	340
VII. Quantitative Analysis of Colloidal Gold Labeling	341
VIII. Troubleshooting: Problems and Recommended Remedies	342
References	342

## PART III Cell Biology

### 16. Regulated Protein Secretion in *Tetrahymena thermophila*

*Aaron P. Turkewitz, N. Doane Chilcoat, Alex Haddad, and John W. Verbsky*

I. Introduction	347
II. Isolation of the Released Contents of Dense-Core Secretory Vesicles (Mucocysts)	350
III. Stimulation of Cells to Test Exocytic Capability or to Study Postexocytic Events	354
IV. Isolation of Intact Secretory Vesicles	357
References	360

<b>17. Electrophysiology of <i>Tetrahymena</i></b>	
<i>Todd M. Hennessey and Heather G. Kuruvilla</i>	
I. Introduction	363
II. Materials and Methods	367
III. Commentary and Summary	374
References	376
<b>18. Isolation and Characterization of <i>in Vivo</i> Modified Histones and an Activity Gel Assay for Identification of Histone Acetyltransferases</b>	
<i>Emily A. Wiley, Craig A. Mizzen, and C. David Allis</i>	
I. Introduction	379
II. Methods	382
References	392
<b>19. <i>Tetrahymena</i> Telomerase Activity, Purification, and Reconstitution</b>	
<i>Chantal Autexier</i>	
I. Introduction	396
II. Materials and Methods	400
III. Commentary and Summary	409
References	412
<b>20. Studying the Telomerase RNA in <i>Tetrahymena</i></b>	
<i>E. Blackburn, D. Gilley, T. Ware, A. Bhattacharyya, K. Kirk, and H. Wang</i>	
I. Introduction	417
II. General Strategy and Overview	419
III. Basic Methods	420
References	431
<b>21. Isolation and Characterization of 22S Outer Arm Dynein from <i>Tetrahymena</i> Cilia</b>	
<i>Tracie M. Gibson and David J. Asai</i>	
I. Introduction	433
II. Methods	435
III. Summary	438
References	439
<b>22. Preparation of Cytoskeletal Fractions from <i>Tetrahymena thermophila</i></b>	
<i>Norman E. Williams</i>	
I. Introduction	441
II. Methods	442
References	446

<b>23. Immunoprecipitation Procedures</b>	
<i>Norman E. Williams</i>	
I. Introduction	449
II. Method	450
References	453

<b>24. <i>Tetrahymena</i> Calcium-Binding Proteins, TCBP-25 and TCBP-23</b>	
<i>Osamu Numata, Kazuko Hanyu, Tetsuya Takeda, and Yoshio Watanabe</i>	
I. Introduction	455
II. Methods	456
References	465

## **PART IV Manipulating Genes**

<b>25. Microinjection of <i>Tetrahymena thermophila</i></b>	
<i>Douglas L. Chalker, John G. Ward, Caterina Randolph, and Meng-Chao Yao</i>	
I. Introduction	469
II. The Technique of Microinjection	472
III. Concluding Remarks	482
References	483

<b>26. Transient and Stable DNA Transformation of <i>Tetrahymena thermophila</i> by Electroporation</b>	
<i>Jacek Gaertig and Geoffrey Kapler</i>	
I. Introduction	486
II. Considerations	487
III. Preparing Plasmid DNA for Electrotransformation	488
IV. General Protocol for Conjugant Electrotransformation	489
V. Transformation with Integrating Vectors: Gene Replacements and Gene Knockouts	492
VI. Transformation with Autonomously Replicating Vectors	495
References	498

<b>27. Biolistic Transformation of Macro- and Micronuclei</b>	
<i>Peter J. Bruns and Donna Cassidy-Hanley</i>	
I. Introduction	501
II. Cells	502
III. Transformation	504
References	511

<b>28. Knockout Heterokaryons Enable Facile Mutagenic Analysis of Essential Genes in <i>Tetrahymena</i></b>	
<i>Bing Hai, Jacek Gaertig, and Martin A. Gorovsky</i>	
I. Introduction	514
II. Strategy	515
III. Methods for Creating Knockout Heterokaryons	524
References	530
<b>29. Creation and Use of Antisense Ribosomes in <i>Tetrahymena thermophila</i></b>	
<i>Qichang Fan, Rosemary Sweeney, and Meng-Chao Yao</i>	
I. Introduction	533
II. Using Antisense Ribosomes in <i>Tetrahymena thermophila</i>	534
III. Considerations Particular to Antisense Ribosomes	538
IV. Evaluation and Applications of the Antisense Ribosome System	544
References	545
<b>30. Protein Tagging in <i>Tetrahymena</i></b>	
<i>Lanlan Yu and Martin A. Gorovsky</i>	
I. Introduction	549
II. Strategies for Gene Tagging in <i>Tetrahymena</i>	551
III. Methods	557
References	557
Appendix I. Genetic Nomenclature Rules for <i>Tetrahymena thermophila</i>	561
Appendix II. Codon Usage in <i>Tetrahymena thermophila</i>	565
Index	569
Volumes in Series	575
