CONTENTS

Contributors xiii
Preface xvii

1. A Gynogenesis-Based Screen for Maternal-Effect Genes in the Zebrafish, *Danio Rerio*

Francisco Pelegri and Stefan Schulte-Merker

I. Introduction 1
II. Optimization of the Gynogenetic Method 4
III. A Pilot Screen for Maternal-Effect Mutations 10
IV. Recovery of Mutations 11
V. Solutions, Materials, and Protocols for Gynogenetic Methods 12
VI. Conclusions 16
References 17

2. Developmental Mutant Screens in the Zebrafish

Fredericus J. M. van Eeden, Michael Granato, Jörg Odenthal, and Pascal Haffter

I. Introduction 22
II. Mutagenesis 22
III. Breeding Scheme 26
IV. Screening Procedure 27
V. Allele Screens 31
VI. Dominant Screens 34
VII. Managing the Outcome of Screens 35
VIII. Potential of Future Screens 37
Appendix—Recipes and Media 38
References 38

3. Haploid Screens and Gamma-Ray Mutagenesis

Charline Walker

I. Introduction 44
II. Production of Haploid Embryos 44
III. Development of Haploid Embryos 48
IV. Genetic Background 51
V. The Haploid Screen 53
VI. Limitations of Haploids 57
VII. Mosaicism in F_1 Screens 59
VIII. Haploid Screens and Gamma-Ray Mutagenesis 60

IX. Nature of Gamma-Ray-Induced Mutations 64
X. Conclusion 67
References 68

4. Early Pressure Screens

Christine E. Beattie, David W. Raible, Paul D. Henion, and Judith S. Eisen

I. Introduction 71
II. Rationale for Use of Early Pressure to Produce Diploid Embryos for Genetic Screens 72
III. Rationale for Use of Screens Focused on Specific Phenotypes 76
IV. Design of Our Screen and Mutant Phenotypes Isolated 76
V. Closing Remarks 82
References 83

5. Retrovirus-Mediated Insertional Mutagenesis in Zebrafish

Adam Amsterdam and Nancy Hopkins

I. Introduction 87
II. Insertional Mutagenesis: A Pilot Screen 89
III. Considerations for a Large-Scale Screen 95
References 97

6. Genetic Applications of Transposons and Other Repetitive Elements in Zebrafish

Zoltán Ivics, Zsuzsanna Izsvák, and Perry B. Hackett

I. Introduction 99
II. Classification of Repetitive Elements 101
III. Genetic Applications of Repetitive Elements 113
IV. Summary and Perspectives 124
References 126

7. Transgenesis

Anming Meng, Jason R. Jessen, and Shuo Lin

I. Introduction 133
II. Materials 134
III. Methods 136
IV. Discussion 146
References 147

8. The Zebrafish Genome

John Postlethwait, Angel Amores, Allan Force, and Yi-Lin Yan

I. Introduction 149
II. Mapping the Zebrafish Genome 150
III. The Zebrafish Gene Map 152

IV. Two Genes in Zebrafish for One in Mammals 157
V. Gene Nomenclature in Zebrafish 159
Conclusions 160
References 161

9. Using Random Amplified Polymorphic DNAs in Zebrafish Genomic Analysis
John H. Postlethwait, Yi-Lin Yan, and Michael A. Gates

I. Introduction 165
II. What Are RAPDs? 166
III. Advantages and Disadvantages of RAPDs as Polymorphic Markers 170
IV. Methods for Developing RAPD Markers 171
V. Using RAPDs to Identify Markers Closely Linked to a Mutation 172
VI. Conversion of RAPD Markers to Sequence Tagged Sites 176
VII. Conclusions 177
References 177

10. Simple Sequence-Length Polymorphism Analysis
Eric C. Liao and Leonard I. Zon

I. Analysis in DNA Sequencing Gels 182
II. Alternative Analysis of SSLP-Containing PCR Product in High-Resolution Agarose Gels 182
III. Troubleshooting and Other Considerations 183
References 183

11. Gene Mapping in Zebrafish Using Single-Strand Conformation Polymorphism Analysis
Dorothee Foernzler and David R. Beier

I. Introduction 185
II. SSCP Methodology 187
III. Gene Mapping 189
IV. Methods 190
References 192

12. Mapping Zebrafish Mutations by AFLP
David G. Ransom and Leonard I. Zon

I. Introduction 195
II. Extraction of Zebrafish Genomic DNA 198
III. AFLP Methods 199
IV. General Considerations 209
References 210

13. Zebrafish Expressed Sequence Tags and Their Applications

Zhiyuan Gong

I. Introduction 213
II. Procedure of cDNA Clone Tagging 214
III. Management of Tagged cDNA Clones 220
IV. Applications of Tagged cDNA Clones 223
References 232

14. Zebrafish YAC, BAC, and PAC Genomic Libraries

Chris T. Amemiya, Tao P. Zhong, Gary A. Silverman, Mark C. Fishman, and Leonard I. Zon

I. Introduction 236
II. Cloning Systems 236
III. Available Zebrafish Genomic Libraries and the Need for Multiple Libraries 239
IV. Screening Methods 241
V. Positional Cloning Using YAC, BAC, and PAC Libraries 243
VI. Further Applications of YAC, BAC, and PAC Resources to Zebrafish Genetics 250
VII. Summary 251
Internet Web Sites Relevant to YAC, BAC, and PAC Cloning 252
References 252

15. Positional Cloning of Mutated Zebrafish Genes

William S. Talbot and Alexander F. Schier

I. Introduction 260
II. Initiating a Positional Cloning Project 262
III. Isolating Genomic Clones and Defining the Critical Region 272
IV. Gene Discovery 279
References 284

16. Construction and Characterization of Zebrafish Whole Genome Radiation Hybrids

Cheni Kwok, Ricky Critcher, and Karin Schmitt

I. Introduction 288
II. Basic Protocol: Construction of Radiation Hybrids 288
III. Characterization of Radiation Hybrids by PCR 292
IV. Characterization of Radiation Hybrids Using FISH Analysis 294
V. Commentary 298
VI. Critical Parameters and Troubleshooting 299
References 302

17. Zebrafish/Mouse Somatic Cell Hybrids for the Characterization of the Zebrafish Genome

Marc Ekker, Fengchun Ye, Lucille Joly, Patricia Tellis, and Mario Chevrette

I. Introduction 304
II. Production of Zebrafish/Mouse Somatic Cell Hybrids 304
III. Analysis of Zebrafish Chromosomes in Hybrid Cells by Fluorescence *in Situ* Hybridization 308
IV. Identification of Chromosomes in Hybrids Using PCR 313
V. Inter-DANA/Mermaid PCR on Hybrids 317
VI. Stability of Zebrafish/Mouse Hybrids 318
VII. Perspectives 319
References 320

18. Banded Chromosomes and the Zebrafish Karyotype

Angel Amores and John H. Postlethwait

I. Introduction 323
II. Methods 324
III. Results and Discussion 332
References 336

19. Zebrafish Informatics and the ZFIN Database

Monte Westerfield, Eckehard Doerry, Arthur E. Kirkpatrick, and Sarah A. Douglas

I. Introduction 339
II. Database Design Process 340
III. The Data Model and the Contents of the Database 342
IV. Using the ZFIN Database 351
References 354

Appendix 1. Genetic Backgrounds and Some Standard Stocks and Strains Used in Zebrafish Developmental Biology and Genetics

Stephen L. Johnson and Leonard I. Zon

Summary of Genetic Backgrounds 357
References 359

Appendix 2. Centromeric Markers in the Zebrafish

Don Kane, Leonard I. Zon, and H. William Detrich III

References 363

Appendix 3. Collection, Storage, and Use of Zebrafish Sperm

David G. Ransom and Leonard I. Zon

I. Introduction 365
II. Materials 366

III. Collection of Zebrafish Sperm 368
IV. Cryopreservation of Zebrafish Sperm 369
V. *In Vitro* Fertilization 370
VI. General Considerations 371
References 372

Appendix 4. Zebrafish Web Site Listings
Pat Edwards

Zebrafish Web Servers 373
Lab URLs 374
