

CONTENTS

Contributors	xiii
Preface	xvii

PART I Introduction

1. Overview of the Zebrafish System	
<i>H. William Detrich, III, Monte Westerfield, and Leonard I. Zon</i>	
I. Introduction	3
II. History of the Zebrafish System and Its Advantages and Disadvantages	4
III. Cell and Developmental Biology, Organogenesis, and Human Disease	6
IV. Genetics and Genomics	7
V. Future Prospects	8
VI. Conclusion	8
References	8
2. Cell Cycles and Development in the Embryonic Zebrafish	
<i>Donald A. Kane</i>	
I. Introduction	11
II. Terminology and the Staging Series	12
III. The Zygote Period	12
IV. The Cleavage Period	14
V. The Blastula Period	16
VI. The Gastrula Period	24
VII. The Segmentation Period	24
References	25

PART II Cell Culture and General Methods

3. Zebrafish Embryonal Cell Culture	
<i>Angela Helmrich and David Barnes</i>	
I. Introduction	29
II. General Cell Culture Considerations	30
III. Primary and Multipassage Zebrafish Embryo Cell Culture	31
IV. Transfection	33
V. Applications to Other Fish Models	34
VI. Conclusion	35
References	36

4. Primary Fibroblast Cell Culture

Barry H. Paw and Leonard I. Zon

I. Introduction	39
II. Material and Methods	40
III. Results and Discussion	41
References	43

5. Production of Haploid and Diploid Androgenetic Zebrafish (Including Methodology for Delayed *in Vitro* Fertilization)

Graham E. Corley-Smith, Bruce P. Brandhorst, Charline Walker, and John H. Postlethwait

I. Introduction	46
II. Equipment and Materials	48
III. Methods	50
IV. Results and Discussion	54
V. Conclusions and Perspectives	58
References	59

PART III Gene Expression and Function in Development

6. Analysis of Protein and Gene Expression

Trevor Jowett

I. <i>In Situ</i> Hybridization to RNA and Immunolocalization of Proteins	63
II. Probe Synthesis	64
III. Fixation	67
IV. Hybridization to Whole-Mount Embryos	68
V. Immunolocalization of Probes	71
VI. Two-Color <i>in Situ</i> Hybridization	73
VII. Double-Fluorescent <i>in Situ</i> Hybridization	77
VIII. Simultaneous Localization of Transcription and Translation Gene Products	78
IX. Embedding and Sectioning Whole-Mount Embryos	82
X. Solutions and Reagents	83
References	84

7. Strategies to Perturb Zebrafish Development

Matthias Hammerschmidt, Patrick Blader, and Uwe Strähle

I. Introduction	87
II. Administration of Reagents	88
III. Reagents	90
IV. Experiments to Modify the Activity of Specific Gene Products	95
V. Perspectives: Inducible Systems	104
References	108

8. Vectors and Techniques for Ectopic Gene Expression in Zebrafish	
<i>Tana M. Hyatt and Stephen C. Ekker</i>	
I. Introduction	117
II. Misexpression from DNA	118
III. Misexpression from RNA	118
References	125
9. Analysis of Zebrafish Development Using Explant Culture Assays	
<i>Yevgenya Grinblat, Mary Ellen Lane, Charles Sagerström, and Hazel Sive</i>	
I. Introduction	128
II. Zebrafish Explants: General Considerations	131
III. Materials Required	133
IV. Guide to Explant Isolation and Culture	140
V. Using Explants to Assay Induction	150
VI. Illustrations of Specification and Induction Assays	153
VII. Future Directions	155
References	155

PART IV Early Embryonic Development

10. Embryonic Axis Formation in the Zebrafish	
<i>Mary C. Mullins</i>	
I. The First Signs of Dorsal	159
II. Establishment of Dorsal–Ventral Polarity in Blastula Stages	160
III. Dorsal–Ventral Patterning	161
IV. Development of Midline Mesodermal Tissues	167
References	174
11. Confocal Microscopic Analysis of Morphogenetic Movements	
<i>Mark S. Cooper, Leonard A. D'Amico, and Clarissa A. Henry</i>	
I. Introduction	180
II. Confocal Imaging of Embryos	181
III. General Principles of Vital Staining	181
IV. Mounting Embryos for Imaging	192
V. Imaging Procedures	193
VI. Multilevel Time-Lapse Confocal Analysis	195
VII. Distribution of Visual Information	200
VIII. Confocal Imaging of Embryos Expressing Green Fluorescent Protein (GFP)	201
IX. Summary	201
References	202

12. Cytoskeletal Dynamics of the Zebrafish Embryo*Jacek Topczewski and Lilianna Solnica-Krezel*

I. Introduction	206
II. Cytoskeleton of the Unfertilized Egg	206
III. Organization and Function of the Cytoskeleton in the Zygote	209
IV. Cleavage and Blastula Period	212
V. Yolk Cell Microtubules during Epiboly	215
VI. Tubulin Dynamics in Neuronal Axons of Living Zebrafish Embryos	218
VII. Methods	219
References	224

13. Kinesin-like Microtubule Motors in Early Development*Ming-Chyuan Chen and H. William Detrich, III*

I. Introduction	227
II. Reverse Transcription-Polymerase Chain Reaction (RT-PCR) Cloning Strategy for Zebrafish Kinesin-like Protein Genes (zKLPs)	229
III. Production of Anti-zKLP Antibodies	235
IV. Expression of GFP-Tagged zKLPs in Cultured Cells	242
V. General Considerations	247
References	248

PART V Organogenesis**14. Techniques in Neural Development***Cecilia B. Moens and Andreas Fritz*

I. Introduction	253
II. Organizers of Anterior–Posterior Pattern in the Neural Plate	254
III. Zebrafish Mutations That Disrupt A-P Pattern in the Neural Tube	259
IV. Techniques for the Study of Neural Patterning Mutants	262
Appendix: Codetection of Lineage Marker and Gene Expression in Whole-Mount Embryos	269
References	270

15. Development of the Retina*Jarema Malicki*

I. Introduction	273
II. Development of the Zebrafish Retina	275
III. Embryological Analysis of Wild-Type and Mutant Zebrafish Visual Systems	278
IV. Genetic Analysis of the Zebrafish Retina	285
V. Summary	294
References	295

16. Growth Control in the Ontogenetic and Regenerating Zebrafish Fin	
<i>Stephen L. Johnson and Paul Bennett</i>	
I. Introduction	302
II. Mutations Affect the Growth, Development, and Regeneration of Fins	304
III. Developmental Checkpoints in Fin Growth	307
IV. Cellular Basis of Growth in the Fin	308
V. Conclusion	310
References	310
17. Vascular and Blood Gene Expression	
<i>Leon H. Parker, Leonard I. Zon, and Didier Y. R. Stainier</i>	
I. Introduction	314
II. Embryonic Vascularization	314
III. Embryonic Hematopoiesis	318
IV. Vascular and Hematopoietic Gene Expression during Development	320
V. Mutations Affecting Vascularization and Hematopoiesis	327
VI. Conclusion and Future Directions	332
References	333
18. Analysis of Hemostasis in the Zebrafish	
<i>Pudur Jagadeeswaran, Yuan C. Liu, and John P. Sheehan</i>	
I. Introduction	337
II. Methods	343
III. Future Assay Development and Applications	352
References	355
19. Cell Lineage Tracing in Heart Development	
<i>Fabrizio C. Serluca and Mark C. Fishman</i>	
I. Introduction	359
II. Methodology	360
III. Analysis	362
IV. Summary	364
References	364
20. Neurogenesis in Zebrafish Embryos	
<i>Ajay B. Chitnis and Igor B. Dawid</i>	
I. The System	367
II. Early Zebrafish Embryos Have a Simple Nervous System	368
III. Origins and Morphogenesis of the Nervous System	370
IV. Antagonists of Bone Morphogenetic Protein (BMP) Activity Lead to a Neural Fate in the Ectoderm	371
V. Fibroblast Growth Factor-8 (FGF-8) Defines Dorsoroventral Positional Information in the Ectoderm	372

VI. Interactions with the Germ-Ring Provide Posteriorizing Signals	373
VII. Ablation of Cells in the Anterior Ectoderm Identifies a Novel Organizer	373
VIII. Patterning of the Neural Plate by Midline Signals: The Role of Factors in the Hedgehog, EGF, and TGF- β Families	373
IX. BMPs Induce Dorsal Neurons	375
X. Controlling the Number of Neurons: Proneuronal Domains and Proneural and Neurogenic Genes	375
XI. Position with Respect to Somite Boundaries Determines Motoneuron Subtype	378
XII. Patterning Neurogenesis in the Epiphysial Neurons	380
XIII. <i>valentino (val)</i> Suggests That Rhombomere Organization Is Preceded by the Formation of "Protosegments"	381
XIV. Perspectives	382
References	383
Index	387
