Contributors	xi
Preface	xiii

SECTION I Principles of Cell Culture

1. Animal Cell Culture Equipment and Techniques

Angela Helmrich and David Barnes

I. Introduction	3
II. Equipment	4
III. Laboratory Design	10
IV. Materials	11
V. Cell Culture Methods	13
References	17

2. Making Informed Choices: Medium, Serum, and Serum-Free Medium

How to Choose the Appropriate Medium and Culture System for the Model You Wish to Create

Jennie P. Mather

I. Introduction	20
II. The Role of Medium	20
III. pH Control	22
IV. Selecting the Appropriate Medium	22
V. Screening Conditioned Medium for Biological Activity	23
VI. Media Preparation	24
VII. Serum, Plasma, and Other Undefined Additives	25
VIII. Testing Media and Components and Quality Control: “It’s in the Water”	25
IX. Troubleshooting Medium Problems	26
X. Altering Commercial Media for Special Uses	27
XI. Medium Optimization	27
XII. Choosing the Optimal Medium: The “Quick and Dirty” Method	28
References	29

3. Cell Line Availability: Where to Get the Cell Lines You Need

Robert J. Hay

I. Introduction	31
II. Diversity and Selection	32
III. Nomenclature	36
IV. Commercial Utility	37
V. Example Cell Lines Developed	38
VI. Cell Line Cryopreservation and Authentication	40
References	46

4. Cell Culture Contamination: Sources, Consequences, Prevention, and Elimination

Carolyn Kay Lincoln and Michael G. Gabridge

I. Introduction	50
II. Cell Culture Technique	50
III. Cell Culture Contamination	52
IV. Summary	63
References	64

SECTION II Establishing Cell Lines

5. Immortalization by Gene Transfection

Yoshinori Katakura, Shahabuddin Alam, and Sanetaka Shirahata

I. Genes Used for Cell Immortalization	70
II. Gene Delivery	77
III. Practical Procedures for Human T-Cell Immortalization by Oncogene Transfection	79
IV. Conclusions	83
References	85

6. Establishment of Mammalian Testicular Cell Lines

Marie-Claude C. Hoffmann and Jose Luis Millan

I. Introduction	94
II. Establishment of Germ Cell and Testicular Cell Lines Using SV40 Large T Antigen	95
III. <i>In Vitro</i> Seminiferous Cords and Their Use for Promoter Analysis of Germ Cell-Specific Genes	101
IV. Establishment of Germ Cell Lines Using a Combination of the SV40 Large T Antigen and Temperature-Sensitive p53	105
V. Conclusions	107
References	109

7. Cell Hybridization, Hybridomas, and Human Hybridomas	
<i>Sanetaka Shirahata, Yoshinori Katakura, and Kiichiro Teruya</i>	
I. Introduction	112
II. Cell Hybridization	114
III. Hybridomas	118
IV. Human Hybridomas	127
V. Application of Human Monoclonal Antibodies	140
References	142
8. Establishing Human Glioma-Derived Cell Lines	
<i>Manfred Westphal and Hildegard Meissner</i>	
I. Introduction	147
II. Culture Methodology and General Aspects	148
III. Cell Culture Methodology, Results, and Application	151
IV. Discussion, Review, and Perspectives	159
References	163
9. Culture Methods for Selective Growth of Normal Rat and Human Schwann Cells	
<i>Ronghao Li</i>	
I. Introduction	168
II. Materials and Instruments	170
III. Culture of Rat Schwann Cells from Dorsal Root Ganglia (DRG)	173
IV. Culture of Adult Human Schwann Cells	179
V. Characteristics of Schwann Cell Cultures	181
References	185
10. Invertebrate Cell Culture Considerations: Insects, Ticks, Shellfish, and Worms	
<i>Christopher J. Bayne</i>	
I. Introduction	188
II. Experimental Considerations for the Beginner	190
III. Considerations for All	193
IV. Considerations over the Long Haul	196
References	199
11. Cell Line Characterization and Authentication	
<i>Joseph Kaplan and Bharati Hukku</i>	
I. Introduction	204
II. Chronology of Cell Line Authentication Efforts	205

III. Markers Used for Cell Line Identification	206
IV. Conclusions	214
References	214

SECTION III Specialized Culture Techniques

12. Laboratory Scale-up of Cell Cultures (0.5–50 Liters)

Jennie P. Mather

I. Introduction	220
II. Roller Bottles	220
III. Microcarriers	221
IV. Growing Cells in Hollow Fibers	223
V. Suspension Adapting Cells	224
VI. Fermentors	226
References	227

13. Cell Synchronization

Gary F. Merrill

I. Introduction	230
II. Estimating Cell Cycle Phase Durations	231
III. Synchronizing Cells	237
IV. Problems in Interpreting Cell Synchrony Experiments	246
References	248

14. Measurement of Cell Death

Deryk T. Loo and Jill R. Rillema

I. Introduction	252
II. Cellular Measurement of Apoptosis	253
III. Biochemical Measurement of Apoptosis	259
IV. Concluding Remarks	262
References	263

15. Simultaneous Measurement of Cell Cycle and Apoptotic Cell Death

Alison Moore, Christopher J. Donahue, Kenneth D. Bauer, and Jennie P. Mather

I. Introduction	266
II. Methods	268
III. Notes	275
References	276

16. Embryonic Stem Cells, Creating Transgenic Animals*Melinda Pirity, Anna-Katerina Hadjantonakis, and András Nagy*

I. Introduction	280
II. Laboratory Equipment	281
III. Culture Conditions	281
IV. Maintaining Embryonic Stem (ES) Cells	281
V. Preparing Tissue Culture Plates for ES Cells	282
VI. Passaging ES Cells	283
VII. Freezing ES Cells from Confluent 10-cm Tissue Culture Plates	283
VIII. Thawing ES Cells from Freezing Vials	284
IX. Establishing ES Cells	284
X. Introducing DNA into and Selecting for Genetically Altered ES Cells	285
XI. Picking ES Cell Colonies	286
XII. Detecting Genome Alterations	287
XIII. Freezing ES Cells in 96-Well Plates	287
XIV. Thawing ES Cells in 96-Well Plates	288
XV. Chimeras	289
XVI. Preparation of the Aggregation Plate	289
XVII. Preparation of Embryos	290
XVIII. Preparation of ES Cells for Aggregation with Eight-Cell-Stage Mouse Embryos	290
XIX. ES Cell \leftrightarrow Embryo Aggregations	291
XX. Germline Transmission	291
XXI. Perspectives	292
References	292

SECTION IV Microscopy and Morphology**17. Electron Microscopy: Use of Transmission and Scanning Electron Microscopy to Study Cells in Culture***David M. Phillips*

I. Introduction	298
II. Studying Monolayer Cultures with the Transmission Electron Microscope	298
III. Cells Grown on Filters or Matrices	304
IV. Cells Grown in Suspension	305
V. Studying Monolayer Cultures with Scanning Electron Microscopy	308
VI. Cells Grown in Suspension	310
VII. A Few Hints	310
References	311

18. Indirect Immunofluorescence Microscopy in Cultured Cells*Sally P. Wheatly and Yu-li Wang*

I. Introduction	314
-----------------	-----

II. Cell Culture	314
III. Sample Preparation for Immunocytochemistry	315
IV. Antibodies	319
V. Signal Detection	321
VI. Miscellaneous Issues	324
VII. Laboratory Protocols for Fixation/Extraction	325
References	331
19. Cellular Localization of mRNA and Protein: <i>In Situ</i> Hybridization Histochemistry and <i>in Situ</i> Ligand Binding	
<i>Teresa K. Woodruff</i>	
I. Introduction	334
II. Method: <i>In Situ</i> Hybridization	335
III. Protocol: <i>In Situ</i> Hybridization	340
IV. Method: <i>In Situ</i> Ligand Binding	342
V. Protocol: <i>In Situ</i> Ligand Binding	345
VI. Analysis of Slides	347
VII. Combination of <i>in Situ</i> Hybridization with <i>in Situ</i> Ligand Binding, Immunohistochemistry, or Metabolic Studies	348
References	350
Index	351
Volumes in Series	363
