
CONTENTS

Contributors	ix
Preface	xi
1. Video Basics: Use of Camera and Monitor Adjustments	
<i>Greenfield Sluder and Edward H. Hinchcliffe</i>	
I. Introduction	1
II. The Black-and-White Video Signal	2
III. Adjusting the Camera and Video Monitor	4
IV. Practical Aspects of Coordinately Adjusting Camera and Monitor	14
References	17
2. Electronic Cameras for Low-Light Microscopy	
<i>Keith Berland, Ken Jacobson, and Todd French</i>	
I. Introduction	20
II. Parameters Characterizing Imaging Devices	23
III. Specific Imaging Detectors and Features	35
IV. Image Acquisition	42
V. Conclusions	43
References	44
3. Cooled CCD Versus Intensified Cameras for Low-Light Video—Applications and Relative Advantages	
<i>Masafumi Oshiro</i>	
I. Overview	46
II. Sensitivity	47
III. Dynamic Range (DR)	58
IV. Spatial Resolution	59
V. Temporal Resolution	60
VI. Geometric Distortion	60
VII. Shading	60
VIII. Usability	61
IX. Advanced Technology	62
References	62

4. Techniques for Optimizing Microscopy and Analysis through Digital Image Processing	
<i>Ted Inoué and Neal Gliksmán</i>	
I. Fundamentals of Biological Image Processing	63
II. Analog and Digital Processing in Image Processing and Analysis	70
III. Under the Hood—How an Image Processor Works	73
IV. Acquiring and Analyzing Images—Photography Goes Digital	83
References	90
5. Introduction to Image Processing	
<i>Richard A. Cardullo and Eric J. Alm</i>	
I. Introduction	91
II. Digitization of Images	92
III. Using Gray Values to Quantify Intensity in the Microscope	94
IV. Noise Reduction	95
V. Contrast Enhancement	101
VI. Transforms, Convolutions, and Further Uses for Digital Masks	104
VII. Conclusions	115
References	115
6. Quantitative Video Microscopy	
<i>David E. Wolf</i>	
I. What Is an Image?	118
II. What Kind of Quantitative Information Do You Want?	119
III. Applications Requiring Spatial Corrections	119
IV. Two-Camera and Two-Color Imaging	125
V. A Warning about Transformations—Don't Transform away What You Are Trying to Measure!	125
VI. The Point Spread Function	126
VII. Positional Information beyond the Resolution Limit of the Microscope	127
VIII. Intensity Changes with Time	133
IX. Summary	133
References	133
7. Proper Alignment of the Microscope	
<i>H. Ernst Keller</i>	
I. Key Components of Every Light Microscope	136
II. Koehler Illumination	140
8. Mating Cameras To Microscopes	
<i>Jan Hinsch</i>	
I. Introduction	147
II. Optical Considerations	151

9. High-Resolution Video-Enhanced Differential Interference Contrast (VE-DIC) Light Microscopy	
<i>E. D. Salmon and Phong Tran</i>	
I. Introduction	153
II. Basics of DIC Image Formation and Microscope Alignment	155
III. Basics of Video-Enhanced Contrast	161
IV. Selection of Microscope and Video Components	168
V. Test Specimens for Microscope and Video Performance	179
References	183
10. A High-Resolution Multimode Digital Microscope System	
<i>E. D. Salmon, Sidney L. Shaw, Jennifer Waters, Clare M. Waterman-Storer, Paul S. Maddox, Elaine Yeh, and Kerry Bloom</i>	
I. Introduction	186
II. Design Criteria	187
III. Microscope Design	191
IV. Cooled CCD Camera	199
V. Digital Imaging System	207
VI. Example Applications	209
References	214
11. Ratio Imaging Instrumentation	
<i>Kenneth Dunn and Frederick R. Maxfield</i>	
I. Introduction	217
II. Choosing an Instrument for Fluorescence Measurements	219
III. Different Methodological Approaches to Ratio Imaging	222
IV. Optical Considerations for Ratio Microscopy	226
V. Illumination and Emission Control	230
VI. Detector Systems	231
VII. Digital Image Processing	233
VIII. Summary	234
References	235
12. Ratio Imaging: Practical Considerations for Measuring Intracellular Calcium and pH in Living Tissue	
<i>Randi B. Silver</i>	
I. Introduction	237
II. Why Ratio Imaging?	238
III. Properties of the Intracellular Indicators BCECF and Fura-2	239
IV. Calibration of the Fluorescence Signal	245
V. Components of an Imaging Workstation	247
VI. Experimental Chamber and Perfusion System—A Simple Approach	249
VII. Conclusion	251
References	251

13. Perfusion Chambers for High-Resolution Video Light Microscopic Studies of Vertebrate Cell Monolayers: Some Considerations and a Design	
<i>Conly L. Rieder and Richard W. Cole</i>	
I. Introduction	253
II. Historical Perspective	256
III. Basic Perfusion Chamber Designs	256
IV. General Considerations When Selecting or Building a Perfusion Chamber	260
V. A Perfusion Chamber for Video-LM of Cultured Cell Monolayers	265
References	272
14. Fluorescence Lifetime Imaging Techniques for Microscopy	
<i>Todd French, Peter T. C. So, Chen Y. Dong, Keith M. Berland, and Enrico Gratton</i>	
I. Introduction	278
II. Time-Resolved Fluorescence Methods	279
III. Fluorescence Lifetime-Resolved Camera	287
IV. Two-Photon Fluorescence Lifetime Microscopy	293
V. Pump-Probe Microscopy	298
VI. Conclusion	301
References	302
15. Digital Deconvolution of Fluorescence Images for Biologists	
<i>Yu-li Wang</i>	
I. Introduction	305
II. Rationale of Constrained Iterative Deconvolution	306
III. Rationale of Nearest-Neighbor Deconvolution	307
IV. Implementation of Nearest-Neighbor Deconvolution	308
V. Evaluation of Digital Deconvolution Methods	309
VI. Prospectus	314
References	315
Index	317
Volumes in Series	329
