Preface ix

Part I MOLECULAR EXERCISE PHYSIOLOGY 1

Chapter 1 The Cell 3

Cellular Architecture 3

Exercise and the Cell 10

Conclusion 18

Chapter 2 Cellular Life Span 19

Cell Cycle and Tissue Turnover 19

Cell Death 25

Effect of Exercise on Cell Proliferation and Cell Death 31

Conclusion 37

Chapter 3 Genes, Genetic Heterogeneity, and Exercise Phenotypes 39

Genes and Genome 39

Gene Expression 40

Regulation of Gene Expression 41

Exercise and Gene Expression 43

DNA Sequence Variation 44

Genetics and Responsiveness to Exercise Training 45

Conclusion 54

Chapter 4 Proteins and Exercise 55

Protein Synthesis 55

Protein Degradation 61

Exercise and Protein Metabolism 63

Conclusion 69

Chapter 5	Extracellular Matrix and Exercise	71
	Extracellular Matrices	71
	Composition of the Interstitial Extracellular Matrix	71
	Composition of Basement Membranes	76
	Synthesis of Collagens	77
	Degradation of Collagens	79
	ECM of Skeletal Muscle	81
	Muscle ECM and Physical Activity	85
Chapter 6	Regulation of Intracellular Ion Composition and pH	95
	Potassium	95
	Intracellular pH Regulation	101
	Magnesium	105
Chapter 7	Inter- and Intracellular Signaling	109
	Hormones and Receptors	109
	Opioid Peptide Precursor Derivatives	117
	Intracellular Signal Transduction	130
Chapter 8	Energy Turnover and Substrate Utilization	145
	Skeletal Muscle Carbohydrate Metabolism During Exercise	145
	Recent Advances in Long Chain Fatty Acid Transport and Metabolism	155
	Molecular Basis of Lactate Transport in Skeletal Muscle	169
Chapter 9	Generation and Disposal of Reactive Oxygen and Nitrogen Species	179
	Reactive Oxygen and Nitrogen Species in Living Organisms	179
	Reactive Oxygen and Nitrogen Species in Exercise	189
	Conclusion	197
Chapter 10	Cellular Responses to Environmental Stress	199
	Hyperthermia	199
	Hypoxia	212

Part II	EXERCISE AND THE CELL	219
Chapter 11	Exercise and the Cardiac Myocyte	221
	Structure of the Cardiac Myocyte	221
	Contractile Cycle and Excitation–Contraction Coupling	223
	Adaptive Hypertrophy and Growth Signaling	229
	Contractile Function and Calcium Handling	240
Chapter 12	Exercise and Endothelium	253
	Endothelial Cell Function	253
	Effects of Physical Training on Vascular Reactivity	259
	Conclusion	262
Chapter 13	Activity-Dependent Adaptive Responses of Skeletal Muscle Fibers	263
	The Multiplicity of Sarcomeric Protein Isoforms	263
	Myofibrillar Protein Isoforms and Fiber Diversity	264
	Metabolic Adaptations of Muscle Fibers to Altered Functional Demands	267
	Fiber Type Transitions	268
	Signaling Pathways Related to Fiber Type Transitions	271
	Conclusion	274
Chapter 14	Exercise and the Alveolar and Bronchial Epithelial Cell	277
	Airways	278
	The Alveolar Epithelium	283
Chapter 15	Exercise and the Liver Cell	289
	Hepatic Carbohydrate Metabolism	289
	Hepatic Lipid Metabolism	295
	Conclusion	298
Chapter 16	Exercise and the Adipocyte	299
	The Adipocyte: Characteristics and Functions	299
	Adipocyte Receptors, Signaling Molecules, and Exercise	304
	Conclusion	307

Chapter 17 Erythrocytes	309
Red Cell Production	309
Principles of O ₂ Transport by the Hemoglobin Molecule	311
Principles of CO ₂ Transport in Blood	314
Regulation of Red Cell Volume	316
Red Cell Influence on Circulation and Respiration	318
Erythrocyte and Radicals	318
Conclusion	319
Chapter 18 Leukocytes	321
Acute Exercise and Leukocytes	321
Mechanisms of Action	326
Chronic Exercise and Leukocyte Subpopulations	327
Exercise and Infections	328
Conclusion	329
Chapter 19 Exercise and the Brain	331
Exercise Improves Cognitive Function in Humans and Prevents Age-Related Brain Atrophy	331
Animal Models to Study the Effects of Exercise on Brain Function	332
Exercise Up-Regulates Brain-Derived Neurotrophic Factor	332
Gene Microarray Analysis Reveals Other Genes That Are Regulated by Exercise	334
Exercise Enhancement of Learning and BDNF	335
Exercise and Depression	336
Definitive Role for BDNF in Human Cognition	337
CNS and Peripheral Regulatory Mechanisms of Exercise Effect on BDNF	337
Conclusion	340
List of Abbreviations	343
References	347
Index	441
About the Editors	453
