

Contents

Preface	V
Contributors	IX
Introduction to the Series "Game Equilibrium Models"	1
⊙ Introduction to Volume III: "Strategic Bargaining"	3
<i>Akira Okada</i>	
A NONCOOPERATIVE APPROACH TO THE NASH BARGAINING PROBLEM	7
1. Introduction	7
2. Two-Person Cooperative Games	10
3. A Noncooperative Bargaining Model	11
4. The Equilibrium Point of Γ	14
5. Short-Term Contract vs. Long-Term Contract	29
6. Concluding Remarks	31
<i>Akira Okada</i>	
A TWO-PERSON REPEATED BARGAINING GAME WITH LONG-TERM CONTRACTS	34
1. Introduction	34
2. The Repeated Bargaining Game	36
3. Characterizations of Equilibria with Memory M	40
4. Conclusion	46
⊙ <i>Elaine Bennett</i>	
THREE APPROACHES TO BARGAINING IN NTU GAMES	48
1. Introduction	48
2. Unique Opportunities and NTU Games	50
3. The Aspiration Model	52
4. The Multilateral Bargaining Model	53
5. The Proposal-Making Model	57
6. Stationary Subgame Perfect Equilibrium Outcomes	61
7. Related Literature	66
Appendix	69
<i>Elaine Bennett</i>	
FOLK THEOREMS FOR THE PROPOSAL-MAKING MODEL	70
1. Introduction	70
2. The Folk Theorems	71
<i>James D. Laing</i>	
A NONCOOPERATIVE MODEL OF BARGAINING IN SIMPLE SPATIAL GAMES	80
1. Simple Spatial Bargaining Games	81
2. Noncooperative Solution Theory	86
3. Stationary Equilibria and Stable Demands in Simple Spatial Bargaining Games	89
4. Noncooperative Implementation of Stable Demand Vectors via Mixed Response Strategies	100
5. Conclusions	112
Appendix	112

Elaine Bennett and Eric van Damme

DEMAND COMMITMENT BARGAINING: - THE CASE OF APEX GAMES -	118
1. Introduction	118
2. Apex Games and Demand Commitment	121
3. The Three Player/Three Equal Cakes Problem	123
4. The n -Player Apex Game - Subgame Perfect Equilibria	124
5. Credible Subgame Perfect Equilibria	130
6. Credible SPEa of Demand Commitment Games	133
7. Discussion	136

Wulf Albers and James D. Laing

PROMINENCE, COMPETITION, LEARNING, AND THE GENERATION OF OFFERS IN COMPUTER-AIDED EXPERIMENTAL SPATIAL GAMES	141
1. Spatial Decision Problems	141
2. Intensity of Bargaining	146
3. Exactness of Bargaining	157
4. Prominence, Competition, and Learning	165
5. Conclusion	175
Appendix A: A Bargaining Mechanism	176
Appendix B: Laboratory Instructions	178

Reinhard Selten and Werner Güth

ORIGINAL OR FAKE - A BARGAINING GAME WITH INCOMPLETE INFORMATION	186
0. Introduction	186
1. The Bargaining Situation	188
2. The Bargaining Game	188
3. Strong Equilibrium Points of the Bargaining Game	191
4. The First Candidate Set	192
5. Dominance Comparisons	194
6. The Bicentric Prior Combination	196
7. The Tracing Procedure	197
8. Best Replies to the Bicentric Prior Combination	199
9. The Case $\pi = (r,s,s)$	201
10. The Case $\pi = (r,r,s)$	202
11. The Risk Dominance Diagram	205
12. Elimination and Substitution	210
13. The Case of an Internal, Universally Dominant Equilibrium	211
14. The Case of an Extreme, Universally Dominant Equilibrium Point	214
15. Candidate Substitution in the Case Without a Universally Dominant Equilibrium Point	215
16. The Case Without a Universally Dominant Equilibrium Point	216
17. The Solution as a Function of the Parameters	224

Hans Haller

WAGE BARGAINING AS A STRATEGIC GAME	230
1. Introduction	230
2. The Bargaining Problem	231
3. Discussion of Cooperative Solutions	232
4. Analysis of an Alternating Offer Model	234
5. Concluding Remarks	238

Reinhard Selten and Myrna H. Wooders

A GAME EQUILIBRIUM MODEL OF THIN MARKETS	242
1. Introduction	242
2. The Game	248
3. Some Additional Aspects of the Equilibrium	270
4. Further Discussion	273
5. Motivation From Experimental Game Theory	279
6. Concluding Remarks	280
