

CONTENTS IN BRIEF

Preface xix

PART ONE

FOUNDATION MATERIAL

- 1 ZEROING IN ON OPERATIONS 3
 - Supplement A: Historical Perspective: Progress in Operations Management* 25
 - Supplement B: Tour of a Repetitive Production Plant: Nissan Motor Manufacturing Corporation, U.S.A* 31
 - Supplement C: Tour of a Job Shop: Teledyne Brown Engineering Fabrication and Assembly Plant I* 37
 - Supplement D: Tour of a Service Operation: A View of Wal-Mart's Distribution System* 42
- 2 STRATEGIC GUIDANCE FOR OPERATIONS 47
 - Supplement E: Decision Making* 75
- 3 SEEKING EXCELLENCE THROUGH QUALITY MANAGEMENT 91
- 4 FORECASTING DEMAND 125

PART TWO

DESIGN OF OPERATIONS SYSTEMS

- 5 FACILITY LOCATION 185
 - Supplement F: Work Measurement and Time Standards* 218
- 6 GENERAL CONFIGURATION AND MODE OF PROCESSING 233
- 7 APPLICATION OF TECHNOLOGY FOR COMPETITIVE ADVANTAGE 279
- 8 DESIGN OF JOBS AND COMPENSATION 307
- 9 REVIEW AND REDESIGN FOR CONTINUOUS IMPROVEMENT 345

PART THREE

PLANNING AND CONTROLLING OPERATIONS

- 10 STATISTICAL QUALITY CONTROL 371
- 11 PLANNING FOR OPERATIONS AND CAPACITY 407

12	OVERVIEW OF MATERIALS MANAGEMENT	441
13	MANAGING INDEPENDENT-DEMAND INVENTORY	477
14	MANAGING DEPENDENT-DEMAND ITEMS AND CAPACITY	515
15	SCHEDULING AND CONTROLLING MANUFACTURING	563
16	THE JUST-IN-TIME PHILOSOPHY OF SEEKING EXCELLENCE	607
	<i>Supplement G: Total Productive Maintenance</i>	<i>637</i>
17	THE NATURE AND SCHEDULING OF SERVICES	649
	<i>Supplement H: Simulation</i>	<i>684</i>
18	SCHEDULING AND CONTROLLING PROJECTS	699
	Appendices	737
	Index	747

CONTENTS

Preface *xix*

PART ONE

FOUNDATION MATERIAL

I ZEROING IN ON OPERATIONS 3

- The Operations Function 3
- The Race for Competitive Excellence 5
 - Adding What Customers Value Is an Important Key • *How Companies Add Value* •
 - What Do We Mean by Excellence?
- Types of Operations 10
 - Manufacturing Operations • Service Operations
- Types of Manufacturing Operations 13
 - Job Shops • Repetitive Manufacturing • Batch Manufacturing
- Types of Service Operations 16
- Unique Characteristics of Service Operations 18
- Managers' Roles in Operations 19
 - Skills Needed by Operations Managers
- Overview of the Book and Issues Discussed 20
- Summary 23 • Key Terms 23 • Discussion Questions 24 • Bibliography 24

SUPPLEMENT A: HISTORICAL PERSPECTIVE: PROGRESS IN OPERATIONS MANAGEMENT 25

- The Industrial Revolution 25
- The First U.S. Factory 26
- Specialized Labor and Standardized Parts 26
- Growth of the Factory System in the United States 26
- The Need for New Management Skills 26
- The Management Movement 27
 - The Scientific Management Era • The Human Relations Era • The Management Science Era • The Information Age • The Trend toward Management by Empowerment
- Growth of Technology 29
- Japanese Influence on Operations Management 29
- The Rise of the Service Sector 29
- Key Terms 30

SUPPLEMENT B: TOUR OF A REPETITIVE PRODUCTION PLANT: NISSAN MOTOR MANUFACTURING CORPORATION, U.S.A. 31

- Scheduling 31
- Suppliers and Material Management 32

Stages of Fabrication	32
Frame Production • Sheet-Metal Stamping • Cab and Bed Buildup • Painting • Assembly • Testing	
Quality	36

**SUPPLEMENT C: TOUR OF A JOB SHOP:
TELEDYNE BROWN ENGINEERING FABRICATION
AND ASSEMBLY PLANT I** 37

Company Products	37
Trends in Operations	39
Individualized Job Planning	39
Materials Handling	39
General-Purpose Equipment	39
Discussion Questions	41

**SUPPLEMENT D: TOUR OF A SERVICE OPERATION:
A VIEW OF WAL-MART'S DISTRIBUTION SYSTEM** 42

2 STRATEGIC GUIDANCE FOR OPERATIONS 47

Application: GE's Globalization Strategy

Strategy Provides Focus	50
Different Operations, Different Strategies	50
Operations: A Vital Element in Strategy	52
Strategy Formulation	54
<i>How Strategy Can Help Add Value for Customers • External Conditions • Internal Conditions • Operations Management in Action: Porsche's Strategy for Cost Efficiency</i>	
Just What Is Quality?	59
The Strategic Significance of Quality	61
The Cost of Quality	62
Cost Efficiency	64
Flexibility	65
Dependability/Service	66
Becoming Excellent at the Right Things	69
<i>Operations Management in Action: "Made in USA" Clothing Heads for Upswing • Application: Attributes that Should Be Emphasized for Quality</i>	
Summary	71
Key Terms	72
Discussion Questions	72
Bibliography	72

SUPPLEMENT E: DECISION MAKING 75

Phases of Decision Making	76
Recognition of the Need for a Decision • Identification of Objectives • Search for Reasonable Alternatives • Evaluation of Alternatives • Selection of the Best Alternative • Implementation	
Modeling	78
Types of Models • The Modeling Process • The Value of Models	
Models of Decision Making	80
Statistical Decision Theory • <i>Application: Example of a Decision Matrix</i> • Decision Trees • <i>Application: Example of a Decision Tree</i>	
Summary	86
Key Terms	86
Discussion Questions	86
Problems	87
Bibliography	89

3 SEEKING EXCELLENCE THROUGH QUALITY MANAGEMENT 91

How Total Quality Management Can Help Add Value for Customers

A Goal of Excellent Quality 94

Three Types of Activities Are Important to Quality • *Operations Management in Action: Ideas from Dr. Deming* • A Customer Focus Is Important

Product Development and Design for Excellence 98

Traditional Approach to Manufactured-Product Design • Improving the Design Process • Quality Function Deployment (QFD) • Technology Improves the Design Process and Deployment of Results

Effective Organization and Teamwork 106

Employee Participation for Quality Improvement • *Operations Management in Action: At Motorola, Quality Is a Team Sport* • Suppliers Are Part of the Team: Long-Term Partnerships • Standards Facilitate Inter-Firm Quality: ISO 9000

Monitoring Performance for Quality and Improvement 111

Consistent, On-Target Performance

Instill Ongoing Improvement 115

Application: The Malcolm Baldrige National Quality Award

Summary 118 • Key Terms 118 • Demonstration Problem 118 •

Discussion Questions 120 • Problems 120 • Bibliography 121

4 FORECASTING DEMAND 125

Introduction 125

Business May Use Forecasts in Several Subject Areas • Numerous Factors Affect Demand • *How Forecasting Can Help Add Value for Customers* • Forecast Horizons and Update Frequencies • Judgment Needed in Forecasting

Overview of Forecasting Methods 131

Subjective Forecasting Methods 132

Field Sales Force • Jury of Executives • Users' Expectations • Delphi Method

Quantitative Forecasting Methods 134

Preliminary Analysis • Components of a Time Series • When Various Models Are Appropriate

Measures of Forecast Accuracy 138

Mean Absolute Deviation (MAD) • Mean Square Error (MSE) • Mean Forecast Error (MFE) • Mean Absolute Percentage Error (MAPE)

Time Series Smoothing 141

Simple Moving Average • Weighted Moving Average • Single Exponential Smoothing • *Application: Example of Single Exponential Smoothing and MAD* • Double Exponential Smoothing

Time Series Decomposition 151

Multiplicative and Additive Models • *Application: Example of Time Series Decomposition*

Causal Models 158

Regression Methods • *Application: Example of Simple Linear Regression*

Using Computers to Forecast 161

Application: Forecasting Product Demand

Monitoring and Controlling Forecasts 163

Summary 165 • Key Terms 166 • Demonstration Problems 167 • Discussion Questions 170 • Problems 171 • Computer-Based Problems 180 • Bibliography 181

PART TWO**DESIGN OF OPERATIONS SYSTEMS****5 FACILITY LOCATION 185**

Determining the Size and Capacity of the Facility 186

The Importance of Location 189

Competition • Cost • Hidden Effects

Location Decisions 190

How Facility Location Can Help Add Value for Customers • The Systems View

Location Factors 191

Market-Related Factors • Tangible Cost Factors • Intangible Factors • *Operations**Management in Action: BMW Selects Spartanburg, S.C.* • *Application: Site Selection in India:**A Case Study*

Location Evaluation Methods 200

Retail Considerations • Usefulness of Geographic Information Systems (GIS) •

General Procedure for Location Selection • Grouping of Service Areas •

Cost-Profit-Volume or Break-Even Analysis • Point Rating • The Transportation

Method of Linear Programming • *Application: Use of the Transportation Method in**Location Analysis* • Simulation

Summary 208 • Key Terms 209 • Discussion Questions 209 • Problems 209 •

Cases 213 • Bibliography 216

SUPPLEMENT F: WORK MEASUREMENT AND TIME STANDARDS 218

Work Measurement 218

Uses for Time Standards • Where Work Measurement Can Be Applied

Methods Used in Setting Standards 219

Time Study • *How Work Measurement and Compensation Can Help Add Value for**Customers* • Standard Data • Predetermined Motion Times • Historical Records •

Work Sampling • Employee Self-Timing

Summary 227 • Key Terms 227 • Demonstration Problems 228 •

Discussion Questions 229 • Problems 229 • Bibliography 231

6 GENERAL CONFIGURATION AND MODE OF PROCESSING 233

Different Layouts for Different Operations 234

Application: Kentucky Fried Chicken's New Prototype • Retail Layout • *How Facility**Layout Can Help Add Value for Customers* • Distribution and Warehouse Areas •Office Layout • *Application: Example of an Office Layout*

Consideration of Major Layout Types 241

Job Shop Layout or Layout by Function • Layout by Product or Flow-Line Layout •

Hybrid Layouts • Manufacturing Cells or Cellular Manufacturing • Some Common

Cell Arrangements • *Operations Management in Action: A Customized, Robotized**Machining Cell* • Materials Handling with Cellular Manufacturing • Application of

Cellular Configurations in Service

Factors That Influence Layout Selection 251

Volume of Production • Other Factors

Support Services 253

Analysis for Layout by Product 254

Line Balancing • Example of Line Balancing • Other Considerations • Potential

Increases in Production Rate

Analysis for Layout by Process 259

Determining Department Size • Determining Department Location •

Transportation Cost as a Criterion for Layout • Nontransportation Factors

Arrangement of Facilities within Departments	264
The Need for Versatility	
Summary	265 • Key Terms 265 • Demonstration Problem 266 •
Discussion Questions	267 • Problems 268 • Bibliography 277

7 APPLICATION OF TECHNOLOGY FOR COMPETITIVE ADVANTAGE 279

Technology Is Important for Several Reasons	280
New Goods and Services • Improved Ways to Provide Goods and Services •	
Improve the Structure and Functioning of the Organization • <i>How Technology Can Help Add Value for Customers</i>	
Management Support for Technical Progress	282
Encouraging Technical Awareness • Foster Idea Acceptance	
Information Technology has Broad Impact on Businesses and Lives	284
Overview of Some Changes from Information Technology	
Some Applications of Technology in Business	286
<i>Operations Management in Action: Information Technology in Travel Services •</i>	
Office Automation • Electronic Data Interchange (EDI)	
Artificial Intelligence (AI)	289
Expert Systems	
Automated Design Support	291
Computer-Aided Design (CAD) • Finite-Element Modeling—Computer Testing of Prototypes • Automated Drafting (and Reducing the Need for It)	
Computer-Aided Manufacturing (CAM)	293
Indirect CAM • Integrated CAD/CAM • Direct CAM	
Flexible Manufacturing Systems (FMS)	296
Advantages of FMS • Limitations of FMS	
Computer-Integrated Manufacturing (CIM)	299
<i>Operations Management in Action: A Breakthrough in Automating the Assembly Line •</i>	
Integration Challenges	
Trends	302
Summary	303 • Key Terms 304 • Discussion Questions 304 • Bibliography 304

8 DESIGN OF JOBS AND COMPENSATION 307

Intrinsic and Extrinsic Rewards	308
Job Design	308
<i>How Job Design Can Help Add Value for Customers</i>	
Multiple Objectives in Job Design	310
The Balancing of Objectives • Specialization	
Some Approaches to Job Design	312
Herzberg's Two-Factor Theory • Job Characteristics Model • Sociotechnical Systems Theory • Job Enrichment Opportunities Differ • <i>Application: Job Enrichment at Shenandoah Life Insurance Co.</i>	
When Should Machines be Utilized?	318
Applications and Potential Applications Should Be Reconsidered • Machine-Worker Interaction • Multiple-Activity Chart	
Motion Economy and Work Efficiency	323
Micromotion Study	
Human Factors and Ergonomics	326
Design of Physical Devices • The Work Environment	
Design of Compensation Methods	328
Time-Based Pay or Incentive Pay	
Some Types of Individual Wage Incentive Plans	330
Piece-Rate Plan • Standard-Hour Wage Plan • Gain-Sharing Plans	

Group Incentive Plans	332
Direct-Wage Group Incentive Plans • Profit-Sharing and Cost-Reduction Plans • The Scanlon Plan • The Lincoln Electric Plan	
Summary	334
Key Terms	335
Discussion Questions	335
Problems	336
Cases	338
Bibliography	341

9 REVIEW AND REDESIGN FOR CONTINUOUS IMPROVEMENT 345

How Continuous Improvement Can Help Add Value for Customers	347
Breakthroughs and Incremental Improvements	347
A General Procedure for Improvement	349
Some Tools and Techniques for Performance Improvement	350
Flow Process Chart • Application: Use of a Flow Process Chart • Checksheets, Histograms, and Location Plots • Pareto Analysis • Cause-and-Effect Diagrams • Brainstorming • Scatterplots	
Business Process Reengineering	357
Some Competitive Improvements Companies Are Making	359
Strategy • Product Design • Logistic Network • Processes and Equipment • Arrangement and Layout • Systems, Scheduling, and Control • Employees • Quality • Operations Management in Action: Operations Improvements at Victory Memorial Hospital	
Summary	367
Key Terms	367
Discussion Questions	367
Bibliography	368

PART THREE

PLANNING AND CONTROLLING OPERATIONS

10 STATISTICAL QUALITY CONTROL 371

Planning for Quality	372
<i>How Statistical Quality Control Can Help Add Value for Customers</i>	
Uses of Statistics in Quality Control	374
Some Considerations about Controlling Processes	375
Mistake Proofing	
Why Use Sampling?	377
Statistical Process Control	377
Chance Causes and Assignable Causes of Variation • Type I and Type II Errors • Attribute Data and Variable Data • Brief Statistical Background • Control Charts for Variable Data: The \bar{X} and R Charts • Application: Establishing Control Limits for \bar{X} and R • Control Charts for Attribute Data • Application: Determining Control Limits for the Fraction Defective • Application: A Control Chart for Defects per Unit	
Acceptance Sampling	391
Single Sampling • Double Sampling • Sequential Sampling • Selecting a Single Sampling Plan for Sampling by Attributes • Application: Finding α and β for a Stated Sampling Plan • Average Outgoing Quality (AOQ) and Its Limit • Dodge-Romig Tables • Military Standard 105D	
Summary	398
Key Terms	399
Demonstration Problems	399
Discussion Questions	401
Problems	402
Computer-Based Problems	404
Bibliography	405

11 PLANNING FOR OPERATIONS AND CAPACITY 407

Business Planning	409
<i>How Capacity Planning Can Help Add Value for Customers</i>	
The Production Plan	411

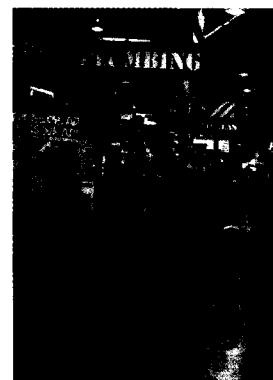

Aggregate Planning: Providing Capacity for the Production Plan	413
The Trial-and-Error Method • <i>Operations Management in Action: Some Disgruntled Workers Say Bosses Order Too Much Overtime</i> • Mathematical Analysis or Optimization Methods	
Planning Must Focus Beyond Some Minimum Horizon	423
The Master Production Schedule	424
Disaggregating the Production Plan into the MPS	
Rough-Cut Capacity Planning	426
Summary 429 • Key Terms 429 • Demonstration Problems 430 • Discussion Questions 433 • Problems 434 • Computer-Based Problems 438 • Bibliography 439	

12 OVERVIEW OF MATERIALS MANAGEMENT 441

<i>How Materials Management Can Help Add Value for Customers</i>	
Materials Flow Is a Major Objective	443
<i>Operations Management in Action: Bergen Brunswig's Logistics</i> • Materials Flow in Manufacturing	
Units That Support Materials Flow	446
Production Control • Traffic • Receiving • Shipping	
Purchasing	448
Reduced Number of Suppliers • Careful Selection, Monitoring, and Support • <i>Operations Management in Action: Joy Technologies' Supplier Evaluation</i> • Early Supplier Involvement • Information Sharing and Rapid Communication • <i>Operations Management in Action: Purchasing Magazine's Medal of Professional Excellence Swept Away by Tennant</i> • Value Analysis • Make-or-Buy Analysis	
Inventory	455
Reasons Companies Hold Inventory • Movement Inventory • The Trend Toward Operating with Less Inventory	
Single-Period and Multiple-Period Inventories	457
Marginal Analysis for Single-Period Inventories • <i>Application: Example of Marginal Analysis to Determine the Amount of Single-Period Inventory to Stock</i> • Multiple-Period Inventory Systems • Inventory Systems for Independent-Demand Items • ABC Classification • <i>Application: Example of ABC Classification</i> • Management of Dependent-Demand Inventories	
Just-in-Time Production	466
Summary 467 • Key Terms 468 • Demonstration Problems 468 • Discussion Questions 470 • Problems 470 • Computer-Based Problems 474 • Bibliography 475	

13 MANAGING INDEPENDENT-DEMAND INVENTORY 477

<i>How Independent-Demand Inventories Can Help Add Value for Customers</i>	
Relevant Inventory Costs	479
Inventory Increases Some Costs • Inventory Decreases Some Costs • Managing to Reduce Inventory Cost	
The Basic Economic Order Quantity Model	482
Total Relevant Inventory Cost • Considerations for Applying the EOQ • <i>Application: Example of Order Quantity Determination</i>	
The Traditional Production Lot-Size Model	486
<i>Application: Example of Production Lot-Size Model</i> • The Importance of Setup Reduction	
Evaluating Quantity-Discount Opportunities	491
<i>Application: Example of Price-Break Order Quantity</i>	
Determining The Reorder Level	494
Safety Stock	494
Factors Affecting Safety Stock Level • Methods of Determining the Safety Stock Level • <i>Application: Example of Setting a Reorder Level on the Basis of an Empirical Probability Distribution</i> • <i>Application: Establishing a Safety Stock Level (Reorder Level) with Explicit Stockout Cost</i>	

Using Computers to Manage Independent Inventory	503
Summary 506 • Key Terms 508 • Demonstration Problems 508 • Discussion Questions 509 • Problems 509 • Bibliography 513	

14 MANAGING DEPENDENT-DEMAND ITEMS AND CAPACITY 515

Material Requirements Planning	516
The MRP Technique—A Requirements Calculator • Closed-Loop MRP—An Information System for Planning and Control • <i>How Managing Dependent-Demand Items Can Help Add Value for Customers</i> • MRP II—Manufacturing Resource Planning • The Focus Is Manufacturing Planning and Control	
A General Overview of MRP	518
Inputs and Outputs of MRP	521
The Master Production Schedule • Bill-of-Materials File • Inventory Status File • Outputs of MRP • <i>Operations Management in Action: Making Good Management Better with MRP II at SKF Roller Bearings</i>	
Other Applications of the Requirements Calculation Logic	533
Distribution Requirements Planning (DRP)	
Some Adaptations in Using MRP	534
Master Scheduling at a Level below Finished Product • Regenerative MRP or Net Change MRP? • Scrap Allowances • Safety Stock • Safety Lead Time • Lot Sizing • <i>Application: Using the Part-Period Algorithm</i>	
Capacity Requirements Planning	541
Potential Benefits from the Use of MRP	544
Implementation of MRP	545
Management Commitment • User Involvement • Education and Training • Selection of Packages • Data Accuracy • Realistic Master Scheduling	
Summary 547 • Key Terms 548 • Demonstration Problems 548 • Discussion Questions 552 • Problems 553 • Computer-Based Problems 559 • Bibliography 560	

15 SCHEDULING AND CONTROLLING MANUFACTURING 563

<i>How Scheduling and Control Can Help Add Value for Customers</i>	
Objectives in Scheduling and Control	564
Information System Linkages for Production Planning and Control	566
Scheduling and Control Needs Vary among Manufacturing Types	567
Preproduction Planning and Cost Estimation	570
Production Control for Repetitive Manufacturing	572
Production Control for Batch Manufacturing	575
Shop Loading with MRP • Production Activity Control with MRP • Further Consideration of Dispatching Decisions	
Job Shop Scheduling and Production Control	582
Backlog or Load Charts and Reports • Jumbled Flow in a Job Shop • Scheduling and Controlling Contracts • Forward and Backward Scheduling • Job Sequencing (Assigning Priorities) • <i>Application: Job Sequencing by Johnson's Rule</i>	
Learning Curves: Planning for Improvement over Time	591
Summary 594 • Key Terms 595 • Demonstration Problem 595 • Discussion Questions 596 • Problems 596 • Computer-Based Problem 603 • Bibliography 604	

16 THE JUST-IN-TIME PHILOSOPHY OF SEEKING EXCELLENCE 607

Origins of JIT	609
JIT: A Comprehensive Philosophy • <i>How Just-in-Time Manufacturing Can Help Add Value for Customers</i>	

People Involvement	611
Teamwork • Discipline • Supplier Partnerships	
Total Quality Control	613
Quality Is Everybody's Job • The Immediate Customer • Quality at the Source • A Culture, Not a Program	
JIT Flow Provides Advantages	614
Insidious Excessive Queues • Queues Are a Waste that JIT Fights	
Elements That Support JIT Flow	615
Limited Variety within a Factory (Focused Factories) • Uniform Production Rate • Pull versus Push Method of Coordinating Work Centers • The Kanban System • Production and Procurement in Small Lots • Quick, Inexpensive Setups • Multiskilled Workers and Flexible Facilities • High Quality Levels • Effective Preventive Maintenance • Continuous Improvement • <i>Operations Management in Action: Teamwork³ at Team Mobilite</i> • Nonmanufacturing Applications of Just-in-Time	
Theory of Constraints (TOC)	628
The TOC Principles • Application of TOC Principles	
Summary	633
Key Terms	633
Discussion Questions	634
Problems	634
Bibliography	635

SUPPLEMENT G: TOTAL PRODUCTIVE MAINTENANCE 637

Managing Maintenance Activities	638
<i>Operations Management in Action: Disney World Maintenance</i>	
Basic Maintenance Decisions	640
Centralized versus Decentralized Maintenance • Contract versus In-House Maintenance • Standby Equipment • Repair versus Replacement • Individual versus Group Replacement • Amount of Maintenance Capacity • Preventive Maintenance versus Remedial Repair	
Evaluation of Preventive Maintenance Policies	641
<i>Application: Analyzing Costs of Maintenance versus Repair</i>	
Predictive Maintenance	642
Summary	644
Key Terms	644
Discussion Questions	645
Problem	645
Computer-Based Problem	645
Bibliography	646

17 THE NATURE AND SCHEDULING OF SERVICES 649

What's Different about Services?	650
Definition of the Customer and the Service Product	651
<i>How the Scheduling of Services Can Help Add Value for Customers</i> • The Product, or Service Package • Marketing and Operations Overlap	
Defining the Service Delivery System	654
A Service Characteristics Matrix • Each Service Must Address Numerous Issues	
Unique Challenges in Managing the Service Delivery System	656
Customer Involvement • <i>Operations Management in Action: Information Technology Supports Separation of Operations</i> • <i>Operations Management in Action: Information Technology to the Aid of Health Care</i> • Limited Ability to Hold Services in Inventory	
Strategies for Influencing Demand Patterns	661
Maintenance of a Fixed Schedule • Use of an Appointment System • Delayed Delivery • Providing Economic Incentives for Off-Peak Demand	
Strategies for Coping with Nonuniform Demand	662
Staggered Work-Shift-Schedules • Part-Time Staff • Let the Customer Select a Level of Service • <i>Operations Management in Action: How the USPS Copes with Nonuniform Demand</i> • Auxiliary Capacity or Subcontractors • <i>Operations Management in Action: How a Fast Food Restaurant Copes with Nonuniform Demand</i> • Multiskilled Floating Staff • <i>Operations Management in Action: How Harper-Grace Hospitals Cope with Nonuniform Demand</i> • Customer Self-Service • A Production-Line Equivalent • A Trade-off between Capacity and Service Delays	

Waiting-Line Analysis	669
The Structure of Queuing Systems • Development of Queues • Mathematical Solutions to Waiting Problems • <i>Application: Analysis of a Single-Channel Queue</i> • Constant Service Time • Truncated Queues • <i>Application: The Effect of a Truncated Queue</i>	

Summary	678
Key Terms	679
Demonstration Problem	679
Discussion Questions	680
Problems	681
Bibliography	683

SUPPLEMENT H: SIMULATION 684

Advantages of Simulation	684
Limitations and Cautions	685
Methodology for Simulation	685
1. Define the Problem • 2. Analyze Costs and Benefits • 3. Abstract the Real System into a Model • 4. Code the Model • 5. Validate the Model • 6. Plan the Experiment • 7. Conduct the Study and Collect Data • 8. Analyze Data and Draw Conclusions • 9. Document and Implement the Findings	

Monte Carlo Simulation	687
<i>Application: An Example of Monte Carlo Simulation</i>	

Applications of Simulation	692
Summary	693
Key Terms	693
Discussion Questions	694
Problems	694
Bibliography	697

18 SCHEDULING AND CONTROLLING PROJECTS 699

Project Management	700
Project Life Cycle • <i>How Project Management Can Help Add Value for Customers</i> • Organization • The Role of a Project Manager	
Network-Based Scheduling Techniques	704
Some Advantages of Network Scheduling	
Steps in Using Network Techniques	705
Precedence Relationships	706
Network Conventions	
Scheduling	708
Critical Path • Float or Slack • Forward Pass • Backward Pass • Example of Scheduling Calculations	
Shifting and Adjusting Resources	714
Time-Cost Trade-offs (Crashing the Project) • <i>Operations Management in Action: Project Management: Santa Monica Freeway Reconstruction</i>	
PERT: Using Probabilistic Time Estimates	715
Optimistic Time • Pessimistic Time • Most Likely Time • <i>Application: The Use of AOA Notation and Probability in PERT</i> • A Caution Regarding Probabilities • Simulation of Project Duration	
Monitoring Projects with Network Techniques	721
The Use of Computers in Project Management	721
Summary	725
Key Terms	727
Demonstration Problem	727
Discussion Questions	729
Problems	729
Bibliography	735

Appendix I: Cumulative Probabilities of the Normal Distribution	737
---	-----

Appendix II: Learning Curve Tables	738
------------------------------------	-----

Appendix III: Cumulative Poisson Probabilities	740
--	-----

Appendix IV: Random Digits	745
----------------------------	-----

Appendix V: Factors for Constructing Control Charts	746
---	-----

Index	747
