INTRODUCTION	7
------------------------	---

Part One

VARIOUS ASPECTS OF COMMUNICATION IN THE FIELD OF NUCLEAR ENERGY

I. Conveying to the public an understanding of the concepts of radiation protection	17
1. General considerations	17
2. The needs of the public for information	18
3. How should radiation protection concepts be communicated?	19
Annex	29
II. Public information in the event of a nuclear accident	39
1. General considerations	39
2. Understanding the reactions and needs of the public in an emergency	40
3. Communicating in a post-accident situation	41
4. The role of the different channels of communication	44
5. International co-operation	45
Annex	47
III. Communicating with the public on nuclear power plant operating experience	51
1. General considerations	51
2. Improving communication techniques	52
3. The role of the regulatory authority and the operator	52
4. Improving relations with the media	54
Annex	56
IV. Radioactive waste management and public information	59
1. General considerations	59
2. Identifying public concerns	61
3. Difficulties in devising a communications strategy at the local level	62

4. Socio-economic aspects	64
5. Effectiveness of the various informational and educational resources	64
Annex	66

Part Two

SUMMARY AND CONCLUSIONS

I. Difficulties associated with information on nuclear energy	71
II. Lessons drawn from experience	75
III. Prospects for the future	78
Annex	80
