Contents

Preface ix

1. Introduction 1

1.1. Problem Formulation 1

1.1.1. Graphs and Flows 2

1.1.2. The Minimum Cost Flow Problem 10

1.1.3. Transformations and Equivalences 14

1.2. Three Basic Algorithmic Ideas 20

1.2.1. Primal Cost Improvement 20

1.2.2. Application to the Max-Flow Problem – The Max-Flow/Min-Cut Theorem 24

1.2.3. Duality and Dual Cost Improvement 33

1.2.4. Auction 42

1.2.5. Good, Bad, and Polynomial Algorithms 51

1.3. The Shortest Path Problem 60

1.3.1. A General Single Origin/Many Destinations Shortest Path Method 62

1.3.2. Label Setting (Dijkstra) Methods 68

1.3.3. Label Correcting Methods 75

1.3.4. Single Origin/Single Destination Methods 77

1.3.5. Multiple Origin/Multiple Destination Methods 81

1.4. Notes and Sources 88

2. Simplex Methods 91

2.1. Main Ideas in Simplex Methods 92

2.1.1. Using Prices to Obtain the In-Arc 97

2.1.2. Obtaining the Out-Arc 101

2.1.3. Dealing with Degeneracy 104

2.2. The Basic Simplex Algorithm 109

2.2.1. Justification of the Simplex Method 110

2.2.2. Choosing the Initial Strongly Feasible Tree – The Big-M Method 111

2.3. Extension to the Problem with Upper and Lower Bounds 122
2.4. Implementation Issues 125
2.5. Notes and Sources 129

3. Dual Ascent Methods 133
3.1. Dual Ascent 133
3.2. Primal-Dual (Sequential Shortest Path) Methods 138
3.3. The Relaxation Method 153
3.4. Implementation Issues 163
3.5. Notes and Sources 165

4. Auction Algorithms 167
4.1. The Auction Algorithm for the Assignment Problem 167
4.1.1. The Main Auction Algorithm 168
4.1.2. The Approximate Coordinate Descent Interpretation 172
4.1.3. Computational Aspects – ϵ-Scaling 172
4.2. Reverse Auction and Inequality Constrained Assignment Problems 177
4.2.1. Auction Algorithms for Asymmetric Assignment Problems 181
4.2.2. Auction Algorithms for Multiassignment Problems 188
4.3. An Auction Algorithm for Shortest Paths 194
4.3.1. Algorithm Description and Analysis 197
4.3.2. Efficient Implementation – Forward/Reverse Algorithm 207
4.3.3. Relation to Naive Auction and Dual Coordinate Ascent 211
4.4. A Generic Auction Algorithm for the Minimum Cost Flow Problem 222
4.5. The ϵ-Relaxation Method 235
4.6. Implementation Issues 241
4.7. Notes and Sources 242

5. Performance and Comparisons 245
5.1. Shortest Path Problems 246
5.2. Max-Flow Problems 247
5.3. Assignment Problems 249
5.4. Minimum Cost Flow Problems 250
5.5. Sensitivity Analysis 250

Appendixes 253
A.1. Problem Generator and Conversion Codes 254
A.2. Shortest Path Codes 262
A.3. Relaxation Code 279
A.4. Auction Codes for Assignment Problems 280
A.5. Combined Naive Auction and Sequential Shortest Path Code 305
A.6. Max-Flow Codes 314
A.7. ϵ-Relaxation Codes 331
