Authors xiii
Foreword xv
Acknowledgements xix

1 Living with Complex Interactive Systems **1**
George R. S. Weir
1 Introduction 1
2 The locus of complexity 2
3 The role of technology 6
4 Applying technology 11
5 Towards dialogue expertise 19

2 An Algebraic Approach to Interface Specification Analysis **23**
J. L. Alty and R. A. Ritchie
1 Introduction 23
2 The GRADIENT User Interface Management System 24
3 Dialogue specification 26
4 Specification analysis using algebraic techniques 32
5 Three example algebras 36
6 Other matrix operations (Algebraic Circuits) 38
7 Use of algebras in dialogue analysis 39
8 Other uses of the specification 48
9 Conclusions 49

3 The Temporal Dimension of Man-Machine Interaction **51**
F. Decortis, V. de Keyser, P. C. Cacciabue and G. Volta
1 Introduction 51
2 An integrated model 54
3 Mechanisms for time apprehension 59
4 Temporal errors 62
5 Time in the operator's model 63
6 Conclusions 71

4 The Phenotype of Erroneous Actions: Implications for HCI Design 73
Erik Hollnagel
1 Introduction . . . 73
2 The genotype and phenotype of erroneous action . . . 81
3 The genotype of erroneous actions . . . 82
4 Simple phenotypes of erroneous actions . . . 85
5 Complex phenotypes of erroneous actions . . . 92
6 A taxonomy of phenotypes of erroneous actions . . . 96
7 Erroneous actions and time . . . 103
8 The Response Evaluation System (RESQ) . . . 110
9 The recognition of erroneous actions . . . 118

5 Modelling the User: User-System Errors and Predictive Grammars 123
Paul A. Booth
1 Introduction . . . 123
2 The use of a modelling technique . . . 124
3 Analysing user-system errors . . . 139
4 Conclusion . . . 145

6 Cognitive Task Analysis? 147
Simon Grant and Terry Mayes
1 Introduction . . . 147
2 Why 'cognitive' task analysis? . . . 148
3 In what way are current approaches 'cognitive'? . . . 149
4 Another approach to cognitive task analysis . . . 165
5 Conclusions . . . 166

7 The Cognitive Engineering of Problem Representations 169
David D. Woods
1 Introduction . . . 169
2 Elemental data display . . . 170
3 HCI as problem representation . . . 174
4 Properties of representational systems . . . 179
5 Resumé: representational systems . . . 187

8 Multiplexed VDT Display Systems: A Framework for Good Practice 189
Lisanne Bainbridge
1 Introduction . . . 189
2 Perceptual-motor skills . . . 193
3 Familiar cognitive skills . . . 199

4 The knowledge-base for problem solving 205

9 Ways of Supporting Ergonomically and Technically Correct Display Design **211**

Bernd-Burkhard Borys

1 Introduction 211
2 Conventional display design 213
3 Structure of the IGE 214
4 Intelligent support for display design 217
5 Further research 221

10 Representations and Abstractions for Interface Design Using Multilevel Flow Modelling **223**

Morten Lind

1 Introduction 223
2 Categories of plant behaviour 225
3 Multilevel Flow Modelling 228
4 Outline of a method for interface development 240

11 Cooperation Between Distributed Knowledge-Bases and the User **245**

Ernest Edmonds and Jenia Ghazikhanian

1 Introduction 245
2 An architecture for cooperation 246
3 The NASK concept 247
4 A mechanism for cooperation 248
5 Examples 249
6 Conclusion 252

12 Human-Computer Interaction Research in the Light of Aulin's Foundations of Mathematical Systems Dynamics **255**

Pertti Järvinen

1 Introduction 255
2 On mathematical systems dynamics 256
3 HCI research and mathematical systems dynamics 259
4 Conclusions 262

References **263**

Index **283**

List of Figures

Chapter 1

1 Pyramid of complexity 4
2 Man-machine system viewed as a pyramid 5
3 Control interface for integral oven and grill 6
4 Digital watch interfaces (simplified) 8
5 The task-artifact cycle 14
6 State transition diagram for 'index search' 15
7 Program elicitation phase of VCR programming 19

Chapter 2

1 A schematic representation of the GRADIENT system 24
2 The functionality of the GRADIENT system 25
3 The environmental specification of an Assistant 27
4 The environmental specification of a Save Assistant 29
5 The environmental language specification for Figure 1 30
6 A possible presentation collection for Figure 5 30
7 An example procedural specification (for saving a file) 31
8 Different labellings of the same network 33
9 Arc label combinations 34
10 Using path algebras to simplify labels 35
11 Closure matrices for P6, P7 and P8 38
12 The Algebraic Circuit concept 38
13 A data modification dialogue 39
14 The possible states for a screen object 44
15 The Save Assistant weak closure matrix 45
16 The four possible paths from node 1 to node 9 45
17 The loops from nodes 3 to 3, 5 to 5, and 7 to 7 46
18 The paths from node 1 to nodes 3, 5, and 7 47
19 The overall tool concept in GRADIENT 48

Chapter 3

1 Structure of the abstract reasoning module (ARCC) 66
2 Relationships between events and actions 68
3 The CIF problem 69

Chapter 4

1 Relations in HCI . . . 75
2 The CSNI taxonomy of human malfunction . . . 83
3 Intrusion . . . 86
4 Replacement . . . 87
5 Types of omission . . . 88
6 Repetition . . . 89
7 Reversal . . . 89
8 True delay and omission . . . 91
9 Premature action . . . 92
10 A taxonomy of phenotypes of erroneous action . . . 97
11 Complex phenotypes of erroneous actions . . . 100
12 Complex phenotypes (continued) . . . 101
13 Relations between time and action . . . 107
14 Basic phenotypes of erroneous actions: detection principles . . . 111
15 Overall functional architecture of the GRADIENT system . . . 112
16 Structure of the RESQ system . . . 115

Chapter 5

1 Two partial screens from the MacDraw system . . . 126
2 A rule from a TAG description of the MacDraw package for the Apple Macintosh . . . 126
3 An icon from a system employing a desktop metaphor . . . 133
4 Chart of mismatches . . . 142
5 An abstract representation of a user's and a designer's/system's model of a task . . . 144

Chapter 8

1 A schema for the main mechanisms underlying skill . . . 192
2 An example strategy . . . 201
3 Some of the links in the knowledge structure about a small part of a complex process . . . 207

Chapter 9

1 Modules of the Intelligent Graphical Editor . . . 216
2 Dynamic picture generation procedure . . . 217

Chapter 10

1 Categories of plant behaviour . . . 226
2 Dimensions of description in MFM . . . 229
3 MFM concepts and corresponding symbols . . . 232
4 A central heating system (MFM model shown in Figure 5) . . . 233
5 MFM model of the central heating system . . . 234
6 Selected subsystem implementing functions in Figure 7 . . . 235

7 MFM model of functions realised by subsystem (see Figure 6) . 236
8 An aggregated MFM model 237
9 Further aggregation of the model in Figure 8 238
10 Yet further aggregation of the model in Figure 9 239
11 An MFM substructure defining a control task 240
12 A set of control tasks 241
13 Systems involved in control of water inventory 242

Chapter 11
1 System architecture diagram 247
2 Example problem 249

Chapter 12
1 Nilpotent dynamical system 257
2 Two categories of causal systems 257
3 Classification of all non-nilpotent dynamical systems 258
