

CONTENTS

Introduction	1
1 The Importance of Irreversibility and Learning - Familiar Examples Revisited	11
1.1 Neoclassical Investment Models: A Brief Survey	11
1.1.1 The Standard Neoclassical Investment Theory Model	13
1.1.2 The Investment Model with Adjustment Costs	15
1.1.3 The Irreversibility of Investment	17
1.1.4 Delivery Lags	18
1.2 Flexible Manufacturing Systems	22
1.2.1 Some Basic Facts about Manufacturing	23
1.2.2 The Determinants of the Flexibility of Manufacturing Systems	25
1.2.3 Manufacturing as a Multiperiod Choice Problem	28
1.3 Conclusions	30
2 The Role of Irreversibility and Learning in Sequential Decision Problems - Basic Concepts	33
2.1 The Two-Period Model without Uncertainty	33
2.1.1 The Elements of the Model	34
2.1.2 Economic Examples	37
2.1.3 Some Basic Results	39
2.1.4 Intertemporal Opportunity Costs	42
2.2 The Two-Period Model with Uncertainty	46
2.2.1 The Elements of the Model	46
2.2.2 Special Cases	50
2.2.3 Flexibility and the Value of Information	54
2.2.4 An Example: Waiting to Invest	56
2.3 Switching Costs	59
2.3.1 The Extended Model	59
2.3.2 An Example: Money Demand as Demand for Flexibility	61
2.4 Summary and Outlook	63
3 Determinants of the Optimal Choice in Sequential Decision Problems - The Two-Period Case	65
3.1 The Formulation of the Problem	66
3.1.1 Some Explanatory Remarks	69
3.1.2 On the Comparison of Information Structures	75
3.2 The Influence of the Choice Set	81

3.3	The Impact of the Decision Criterion	82
3.3.1	Comparison of Bayesian Values	83
3.3.2	Conditions for the Equality of Different Strategies	88
3.3.3	Comparison of the Flexibility of Initial Choices	90
3.4	The Impact of the Information Structure	93
3.4.1	A Counterexample	95
3.4.2	Relative Gains from Information for Different Positions	97
3.4.3	The JONES/OSTROY-Theorem	98
3.4.4	Examples and Modifications	99
3.4.5	Interpretation: Does Greater Uncertainty Imply Greater Demand for Flexibility?	102
3.5	The Two-Period Model - Final Thoughts	104
	Appendix	109
4	A T-Period Model of Intertemporal Choice with Irreversibility and Uncertainty	111
4.1	The General T-Period Model of Choice	112
4.1.1	The Structure of the Choice Set	113
4.1.2	Economic Examples	117
4.1.3	Results	120
4.1.4	Intertemporal Opportunity Costs	121
4.1.5	Uncertainty and Learning	124
4.2	Some Generalities on Intertemporal Planning	131
4.2.1	Maximum Lifetime, Time Horizon and Time Preference	132
4.2.2	Rolling Myopic Plans	136
4.3	Modelling Rolling Myopic Plans	138
4.3.1	The Standard T-Period Control Problem	138
4.3.2	Examples	140
4.3.3	Bellman's Principle	144
4.3.4	(T,S)-Plans	146
4.3.5	A Monotonicity Result	151
4.4	Final Remarks on the T-Period Model	154
5	Consumption and Savings Decisions of Households	157
5.1	Motives for the Demand for Money - Some Familiar Tenets	158
5.2	The Structure of the Model	161
5.3	Money Demand when there are no Transaction Costs	165
5.4	Transaction Costs	168
5.4.1	Holding Money in the Absence of Uncertainty	170
5.4.2	Holding Money to Stay Flexible	174
	Appendix	185
	Epilogue	187
