<i>List of figures</i>	ix
<i>List of tables</i>	xi
<i>List of exercises</i>	xiii
Preface	xv
Acknowledgements	xix
1 Concepts in consumer research	1
Forms of consumption	1
Widening the role of consumer research	17
Control of public services	17
Brands and product types	19
Human processes	22
Summary	22
Further reading	23
2 Regularities in buying behaviour	24
Overview	24
The purchase of a brand	27
Negative Binomial Distribution (NBD) theory	32
Product field effects	36
Inducing change in the market	46
Critical review	51
Summary	59
Further reading	60

3 Attitude and behaviour	61
Attitudes and concepts	62
Reasons for action	62
Behaviourism and cognitivism	63
Multi-attribute alternatives	68
Expectancy-value theory of attitude	69
The semantic differential	70
Compensation	71
Modal salient beliefs	72
When attitudes fail to predict action	74
Correspondence	75
Purchase intentions	81
Summary	82
Further reading	83
4 Predicting and explaining action: reasoned action theory	84
Assumptions	84
History	85
Determinants of intention	86
Measurement details	88
Illustrating the theory	90
Summary	105
Further reading	106
5 Further aspects of attitude-behaviour theory	107
The principle of sufficiency	107
Enlarging the determinants of intention	109
The distinction between A_B and SN	112
Measurement issues	114
Relevance of reasoned action theory to inducing change	117
Dynamic effects of communications	119
Summary	120
Further reading	121
6 Attitude measurement in marketing	122
Quantitative and qualitative research	122
Evaluative and descriptive beliefs	123
The BMRB method	126

Expectancy-value method of measuring brand attitudes	126
Constancy of brand attitudes	128
Likert's method of summated ratings	130
Scale referents in multi-attribute research	132
Brand stimuli and brand benefits	135
Conjoint analysis	138
Summary	140
Further reading	141
7 Information processing and evaluative change	142
Types of explanation	142
Mechanisms and meaning	143
Processing value and probability	154
Dissonance theory	160
Researching the sequence of decision making	166
Summary	171
Further reading	172
8 Media advertising and sales promotions	173
Introduction	173
The promotional mix	174
Research developments	178
Sales promotion research	189
Effects of media advertising on sales	197
Ideas about advertising	207
Pre-testing copy	218
Summary	223
Further reading	225
Glossary	225
References	227
Author index	245
Subject index	247

Figures

1.1	Dimensions of consumer action	3
1.2	The complete decision process model (from Engel, Blackwell and Miniard, 1986, p. 35)	10
3.1	The multi-component model of attitude (from Rosenberg and Hovland, 1960)	77
4.1	The theory of reasoned action	87
4.2	Birth control pill usage among college women: relationships between components of the theory of reasoned action (from Jaccard and Davidson, 1972)	92
4.3	Standardized regression coefficients relating attitude, confidence and previous attempts to intention and later attempts to stop (from Sutton, Marsh and Matheson, 1987)	98
5.1	Theory of planned behaviour	111
7.1	Bartlett's battle axe. People see this object as an axe, turf cutter or key because these are similar (from Bartlett, 1932)	149
7.2	The value-utility relationship	155
7.3	The probability relationship	157

8.1	Weekly demand from Scantrack research for two product categories: (a) port, showing the build up of weekly sales over the Christmas period; and (b) confectionery, showing the sales peaks for special days (Nielsen Marketing Research)	182-3
8.2	Effects of sales promotions averaged over different periods (from Eskin, 1985)	184
8.3	The ratio of instant coffee drinkers in the TV audience to instant coffee drinkers in the population by time of day (adapted from Eskin, 1985)	186
8.4	Average response to trade promotions (from Fulgoni, 1987)	188
8.5	Sales of Pepsi Cola show no relationship between promotional sales and base rate sales (from the <i>Marketing Fact Book</i> Scanner Data Base, Information Resources Inc.)	191
8.6	The price/promotion response model (from the <i>Marketing Fact Book</i> Scanner Data Base, Information Resources Inc.)	198
8.7	Two effects of advertising	199
8.8	Possible relationships between sales gain and advertising weight	205
8.9	The FCB grid	216

Tables

2.1	Repeat purchase for given purchase frequencies and penetrations	30
2.2	Sales of Corn Flakes and Shredded Wheat by a sample of 1420 US households (from Ehrenberg and Goodhardt, 1979)	31
2.3	Number of students making one or more telephone calls in a day	34
2.4	Brand penetration and purchase frequency for instant coffee sales over 48 weeks in the USA (MRCA Panel Data, 1981)	38
2.5	Average frequencies of purchase of cereals in a year (from Ehrenberg and Goodhardt, 1979)	41
2.6	Number of smokers making 0, 1, 2, 3 and 4+ attempts to give up over a six month period and expected figures predicted from NBD theory	53
3.1	Cross-lagged correlations relating changes in attitude (A) and behaviour (B) (from Kahle and Berman, 1979)	66
3.2	Effect of correspondence on the attitude-behaviour (A-B) relation (from Ajzen and Fishbein, 1977)	79
4.1	Mean beliefs and outcome evaluations for college women who intend and do not intend to use birth control pills (scales -3 to +3) (from Ajzen and Fishbein, 1980, p. 146)	93

4.2	Correlations between summary attitude scales and behavioural intention to give up smoking (from Marsh and Matheson, 1983, p. 115)	97
4.3	Subsequent smoking behaviour (percentage of their group) by typology of original smoking intentions (from Marsh and Matheson, 1983, p. 122)	99
4.4	Summary data from student studies	101
4.5	Salient beliefs about eating Mars Bars. Correlations between likelihood-evaluation products and intention	102
7.1	Average ratings of subjects in favour of a pardon for Nixon under different conditions of arousal (from Cooper <i>et al.</i> , 1978)	164
7.2	Ratings in favour of a ban on inflammatory speakers on the campus under different believed conditions of arousal (from Zanna and Cooper, 1974)	165
7.3	Number of students at option talks (from East, 1972)	169
7.4	Duration of attention (seconds) to the alternatives in choice experiments (from East, 1973)	170
8.1	Percentage of BehaviorScan weight tests showing significant sales increases	206
8.2	Percentage of participants signing up for an alcoholic treatment unit	212

Exercises

1.1	Habits	7
1.2	Involvement	13
1.3	Constrained actions	15
2.1	Applying the sales equation	27
2.2	Using Program NBD: how the period affects the data	33
2.3	Collecting panel data for comparison with NBD predictions	34
2.4	Exploring the relationships	34
2.5	Marketing analyses	35
2.6	Inferences about purchase frequency	40
3.1	The expectancy-value matrix	71
3.2	Eliciting salient beliefs and salient referents	72
3.3	Correspondence test	80
4.1	Analysing the bases of charity giving	90
4.2	Research by the student group	103
6.1	Brand attitudes	123
6.2	Constructing a Likert scale	130
6.3	Measuring the attributes of brands of chocolate bar	133
6.4	Stimulus management	136
6.5	Constructs	137
7.1	How did you decide?	142
7.2	Availability effects	151, 152

7.3	Who was to blame?	153
7.4	Positive and negative choices	156
7.5	The Allais paradox	156
7.6	Life and death	159
8.1	Advertisement recall and product use	210
8.2	Two hypothetical campaigns	218
