List of Figures	ix
List of Tables	xi
Preface <i>Ralph E. Steuer</i>	xiii
Introduction <i>Matthias Ehrgott, Xavier Gandibleux</i>	xv
References	xviii
1	
Theory of Vector Optimization <i>Christiane Tammer, Alfred Göpfert</i>	1
1.1 Solution Concepts	1
1.2 Optimality Conditions	13
1.3 Duality	24
1.4 Vector Variational Inequalities and Vector Equilibria	34
1.5 Multicriteria Fractional Programming	36
1.6 Multicriteria Control Problems	42
References	46
2	
Nonlinear Multiobjective Programming <i>Tetsuzo Tanino, Hun Kuk</i>	71
2.1 Introduction	72
2.2 Solution Concepts	73
2.3 Scalarization and Optimality Conditions	76
2.4 Stability and Sensitivity Analysis	80
2.5 Duality	81
2.6 Vector Variational Inequalities	86
2.7 Concluding Remarks	89
References	89

3

Goal Programming in the Period 1990-2000	129
<i>Dylan F. Jones, Mehrdad Tamiz</i>	
3.1 Introduction	129
3.2 Details of Literature Review	133
3.3 Classification of GP Extension Articles	136
3.4 Integration and Combination of Goal Programming with Other Techniques	140
3.5 Conclusion and Comment	144
References	148

4

Fuzzy Multiobjective and Multilevel Optimization	171
<i>Masatoshi Sakawa</i>	
4.1 Fuzzy Decision	172
4.2 Multiobjective Programming and Solution Concepts	178
4.3 Interactive Multiobjective Programming	179
4.4 Fuzzy Multiobjective Linear Programming	183
4.5 Interactive Fuzzy Multiobjective Linear Programming	186
4.6 Interactive Fuzzy Multiobjective Linear Programming with Fuzzy Parameters	193
4.7 Related Works and Applications	203
4.8 Interactive Fuzzy Two-level Linear Programming	204
4.9 Interactive Fuzzy Two-level Linear Programming with Fuzzy Parameters	212
References	217

5

Interactive Nonlinear Multiobjective Procedures	227
<i>Kaisa Miettinen</i>	
5.1 Introduction	227
5.2 Concepts	228
5.3 Methods	231
5.4 Comparing the Methods	253
5.5 Conclusions	254
References	256

6

Evolutionary Algorithms and Multiple Objective Optimization	277
<i>Carlos A. Coello Coello, Carlos E. Mariano Romero</i>	
6.1 Introduction	278
6.2 Definitions	279
6.3 Notions of Evolutionary Algorithms	280
6.4 Classifying Techniques	281
6.5 Non-Pareto Techniques	281
6.6 Pareto-Based Techniques	291
6.7 Recent Approaches	298
6.8 Diversity	302
6.9 Test Functions	305
6.10 Metrics	306
6.11 Applications	308
6.12 Future Research Paths	309
6.13 Summary	311
References	312

7

Data Envelopment Analysis in Multicriteria Decision Making	333
<i>Hirotaka Nakayama, Masao Arakawa, Ye Boon Yun</i>	
7.1 Introduction	334
7.2 Data Envelopment Analysis	335
7.3 Basic DEA Models	337
7.4 GDEA Based on Parametric Domination Structure	343
7.5 GDEA Based on Production Possibility	347
7.6 Comparison between GDEA and DEA Models	353
7.7 GDEA for Multiple Criteria Decision Making	357
7.8 Conclusions	364
References	365

8

Multiojective Combinatorial Optimization	369
<i>Matthias Ehrgott, Xavier Gandibleux</i>	
8.1 Introduction	370
8.2 Multiple Objective Combinatorial Optimization Problems	371
8.3 Properties of MOCO Problems	373
8.4 Solution Methods for MOCO Problems	376
8.5 Classification of the Literature	388
8.6 Annotation of the Literature Problem by Problem	389
8.7 Open Questions and Conclusions	404
References	407

9

Multicriteria Scheduling Problems	445
<i>Vincent T'Kindt, Jean-Charles Billaut</i>	
9.1 Scheduling Theory	446
9.2 Overview of Multicriteria Optimization Theory	451
9.3 Solving Multicriteria Scheduling Problems	454
9.4 Complexity Results	458
9.5 Single Machine Problems	465
9.6 Parallel Machines Problems	475
9.7 Shop Problems	479
References	482

Index

List of Figures

1.1	The set of efficient elements of a vector-valued location problem (P_7) with the maximum norm.	34
4.1	Membership function and characteristic function.	173
4.2	Fuzzy number.	174
4.3	α -level set of fuzzy number \tilde{m} .	175
4.4	Fuzzy decision, convex fuzzy decision, and product fuzzy decision.	177
4.5	Graphical interpretation of minimax method.	181
4.6	Linear membership function.	184
4.7	Fuzzy min membership function.	187
4.8	Fuzzy max membership function.	188
4.9	Fuzzy equal membership function.	188
4.10	Linear membership function.	208
4.11	Flowchart of interactive fuzzy two-level programming.	213
5.1	Visual illustrations in WWW-NIMBUS.	255
6.1	Scheme of VEGA's selection mechanism. It is assumed that the population size is N and that there are M objective functions.	284
6.2	Example of cooperative and non-cooperative game solutions.	290
6.3	Flowchart of the Nondominated Sorting Genetic Algorithm (NSGA).	294
6.4	Diagram that illustrates the way in which the micro-GA for multiobjective optimization works.	300
7.1	CCR efficient frontier and production possibility set generated by the CCR model from the observed data.	339
7.2	BCC efficient frontier and production possibility set generated by the BCC model from the observed data.	341
7.3	FDH efficient frontier and production possibility set generated by the FDH model from the observed data.	344

7.4	Efficient frontier generated by GDEA model with $\alpha = 10^{-6}$.	347
7.5	Efficient frontier generated by GDEA model with $\alpha = 10$.	347
7.6	Efficient frontier generated by GDEA' model with $\alpha = 10$.	348
7.7	Efficient frontier generated by GDEA _D model with $\alpha = 10^{-6}$ and $\kappa = 0$.	352
7.8	Efficient frontier generated by GDEA _D model with $\alpha = 10$ and $\kappa = 0$.	353
7.9	Efficient frontier generated by GDEA _D model with $\alpha = 10$ and non-fixed κ .	353
7.10	Ranking method.	358
7.11	GA with DEA method.	359
7.12	Geometric interpretation of α in (P).	361
7.13	Results to the Example 1 (from left to right, 10, 20, 30 generations, respectively).	363
9.1	A framework for solving Multicriteria Scheduling Problems.	455
9.2	Reduction tree for criteria in scheduling [14, 86].	460
9.3	Reductions for lexicographical minimization (1).	460
9.4	Reductions for lexicographical minimization (2).	461

List of Tables

3.1	Division of articles by field of application.	136
7.1	An example of 1-input and 1-output.	346
7.2	The optimal values in basic DEA models and GDEA model.	346
7.3	An Example of 1-input and 1-output and optimal value in the problems (CCR), (BCC) and (FDH).	351
7.4	Optimal solution to $(GDEA_D)$ with $\alpha = 10^{-6}$ and $\kappa = 0$.	351
7.5	Optimal solution to $(GDEA_D)$ with $\alpha = 10$ and $\kappa = 0$.	352
7.6	Optimal solution to $(GDEA_D)$ with $\alpha = 10$ and non-fixed κ .	352
7.7	Input and output values for 13 Mexican banks, 1990 – 1991 (billions of nominal pesos).	354
7.8	DEA Mexican bank analysis, 13 banks, 1990. Output is total interest and non-interest income; inputs are total deposits and non-interest expense.	355
7.9	DEA Mexican bank analysis, 13 banks, 1991. Output is total interest and non-interest income; inputs are total deposits and non-interest expense.	356
8.1	Entries for <i>Pos1</i> : Combinatorial structure.	389
8.2	Entries for <i>Pos3</i> : Type of problem.	389
8.3	Entries for <i>Pos4</i> : Solution method applied.	390
9.1	Complexity results for problems of type 1 Z .	462
9.2	Complexity results for problems of type 1 $Lex(Z_1, Z_2)$.	462
9.3	Complexity results for problems of type 1 $\epsilon(Z_1/Z_2)$.	463
9.4	Complexity results for problems of type 1 $F_\ell(Z_1, Z_2)$.	464

9.5	Complexity results for problems of type $P2 \parallel$ $Lex(\overline{C}, Z_2)$.	464
9.6	Complexity results for problems of type $1 \mid p_j = 1 \mid$ $Lex(Z_1, Z_2)$.	465
