CONTENTS

Part I. Introduction

I. Introduction	3
How do we choose between alternative investments?	3
The Investment process	4
The concept of an investor's required rate of return	4
How does risk affect investment criteria?	5
Can the choice of finance affect the value of the firm?	6
Recommendations for further reading	7
References	7
Part II. Investment Appraisal	
Introduction to Part II	10
2. Compound Interest and Present Value	
Introduction	11
The time value of money	11
Capital growth	12
Present values	13
How to determine the rate of interest	15
The investment period	15
Annuities	16 17
Discounting monthly, daily, and continuously	17
Conclusion	19
Exercises	21
Appendix	21
3. Net Present Value and Internal Rate of Return	
Capital projects and the separation theorem	23
Example	24
Net present value and internal rate of return for a single-period	
investment	25
The net present value method in a multi-period setting	27
The internal rate of return in a multi-period setting	30

x Contents

Multiple solutions and imaginary roots	32
Ranking problems	33
Summary	35
Recommendations for further reading	36
References	36
Exercises	37
I. Relevant Cash Flows	
Introduction	38
The difference between profit and cash flow	38
Depreciation	39
Working capital	39
Accounting rate of return	44
How does this relate to the internal rate of return?	45
Cash flows beyond the payback period	46
Cash flows from lost opportunities	49
The irrelevance of sunk costs	50
Relevant cash flows when comparing assets with different life	
spans	51
Summary	54
Recommendations for further reading	55
References	55
Exercises	56
Appendix	58
P. Luffeston in Duntant Amendial	
5. Inflation in Project Appraisal	
Introduction	59
Specific inflation, general inflation, and the discount rate	59
Discounting the money cash flows	62
Discounting the real cash flows	63
Uniform rates of inflation	65
Conclusion	67
Recommendations for further reading	68
References	68
Exercises	68
6. Capital Rationing	
Introduction	70
One-period constraint	70
Multi-period constraints	71
<u>-</u>	73
Extensions to the basic programming model	13

	Contents	хi
Summary		75

References		75
Exercises		76
7. Introduction to Risk Analysis		
Introduction		78
The mean return of the project		78
The standard deviation of the project's return		79
The risk of insolvency		81
The mean net present value and its standard deviation		83
Decision trees: how to calculate net present values when the	ere	
are sequential decisions		85
Risk-adjusted discount rates and certainty equivalents		88
Summary		90
Recommendations for further reading		91
References		91
Exercises		91
8. Risk within a Portfolio Framework		
Introduction		93
The combined risk of two projects		93
Correlation between two projects		95
Finding the minimum variance of a portfolio of two securit	ies	97
The variance of a large portfolio		98
Systematic and unsystematic risk		99
The efficient market portfolio		102
The capital asset pricing model		103
The use of the capital asset pricing model in multi-period		
investments		107
Converting cash flows into certainty equivalents using the		• • •
capital asset pricing model (CAPM)		110
Limitations of the capital asset pricing model in project		
appraisal		111
The traditional capital asset pricing model		112
What happens if we relax some of the assumptions?		112
Should we ignore tax?		113
Multi-period problems		113
An efficient market portfolio		113
Arbitrage pricing		114
For managers or shareholders: which risk matters?		114
