List of Figures and Tables		ix
Preface		xiii
Acknowledgments		xv
Part I	Leadership Perspectives on Technology Transfer	
1	The Importance of Technology Transfer and Commercialization to U. S. Competitiveness <i>Mark S. Lieberman</i>	1
X 2	Encouraging Innovation and Excellence in Technology Transfer <i>Grant A. Dove</i>	9
3	SEMATECH: Necessary but Not Sufficient <i>Robert Noyce</i>	17
X 4	It's Not Over until It's Transferred! <i>Edward A. Miller</i>	21
Part II	Organizational Culture and Technology Transfer	
X 5	Technology Transfer in Knowledge-Intensive Organizations <i>Bill Curtis</i>	27

6	Science as a Competitive Weapon: Utilizing Alliances in Global Markets <i>Debra M. Amidon Rogers</i>	39
7	Technology Transfer in a Diverse Corporate Environment <i>Wendell M. Fields</i>	57
8 X	Creating and Managing Consortia Cultures through Transitional Episodes <i>Michael S. Rubin</i>	67
Part III	Policies and Procedures for Technology Transfer	
9 /	Transferring Technology in R&D Consortia: Effective Forms of Interorganizational Relations <i>William M. Evan</i> <i>Paul Olk</i>	91
10 /	A Consortium-Based Model of Technology Transfer <i>Larry Novak</i>	103
11	Technology Transfer at the Software Productivity Consortium: A Partnership Approach <i>Claude DelFosse</i>	111
Part IV	Overcoming Barriers to Technology Transfer	
12	Building a Technology Transfer Infrastructure <i>Raymond W. Smilor</i> <i>David V. Gibson</i>	129
13 X	Technology Transfer from Academia: Prescription for Success and Failure <i>John F. Hesselberth</i>	151
14 X	Partnerships with Industry and the Oak Ridge National Laboratory <i>Warren D. Siemens</i>	157

Part V	Perspectives on Japanese Consortia and Technology Transfer	
15	Outline of the Fifth-Generation Project and ICOT Activities <i>Takashi Kurozumi</i>	173
16	Comparison of Several Types of Consortia for Software Research and Development <i>Fumihiko Kamijo</i>	193
17	ERATO: A Multidisciplinary Stage for Young Researchers from Industry, Government, Universities, and Abroad <i>Alan Engel</i>	201
Part VI	Perspectives on European Consortia and Technology Transfer	
18	The European Computing-Industry Research Centre: Challenges and Answers <i>Hervé Gallaire</i>	213
19	AI Research and Its Opportunities for Technology Transfer at Siemens <i>Dieter Schütt</i>	223
Part VII	New Initiatives in Technology Transfer	
20	The American Technology Initiative: Competitiveness through R&D Joint Ventures <i>Syed A. Shariq</i>	233
21	Technology Transfer in a Tripartite Consortium <i>J. Grant Brewen</i>	241
22	A Western Technology Transfer Network for Small Business <i>Louis D. Higgs</i>	247
Appendix I	List of U.S. Consortia Registered under the National Cooperative Research Act of 1984	255
Appendix II	Consortia Filings and Membership	269
	About the Editors	271
	About the Contributors	273
	About the Sponsors	277

List of Figures and Tables

Figures

5.1	Productivity factors in TRW	28
5.2	Individual differences in NASA software	29
5.3	Team communication by artifact	31
5.4	A programmer's communication nets	32
5.5	Variance in productivity as a function of technology use	34
5.6	The layered behavioral model of software development	35
5.7	Sources of productivity growth in different industries	36
5.8	Technology transfer lags in software engineering	37
6.1	Toward paradigm integration	40
6.2	The global environment	44
6.3	Balance of economic perspectives	46
6.4	Thesis framework	47
6.5	The Horwitch model of joint ventures	48
6.6	First tier of the lotus flower at the intraorganizational or microeconomic level	49
6.7	Second tier of the lotus flower at the interorganizational level	50
6.8	Third tier of the lotus flower at the transnational level	51
6.9	The core of the lotus flower: the customer	52
6.10	New strategy elements for global innovation management	54
7.1	Pyramid of individual development	59
7.2	Hewlett-Packard's multifaceted approach to technology transfer	60
7.3	Hewlett-Packard's expert forums to assist in technology transfer	62
8.1	The metaorganization as counterstructural transformation	70

8.2	Episodic transitions and collaborative competence	75
8.3	Transitional stages	78
8.4	Collaborative strategy, structure, and process	79
9.1	Mean satisfaction with technology transfer mechanisms	97
9.2	Typology of satisfaction with technology transfer	98
10.1	SEMATECH as a part of a larger set of entities needed to improve the U.S. semiconductor industry	104
10.2	SEMATECH's technical communications organization	105
10.3	The governance of SEMATECH	106
10.4	Member-company technology transfer from SEMATECH	107
10.5	Most effective means of technology transfer at SEMATECH	108
10.6	The types of meetings at SEMATECH and the participants	109
10.7	SEMATECH's customer window	109
11.1	A partnership of industry leaders	112
11.2	A common set of transfer mechanisms supports the technology partnership	114
12.1	U.S. R&D consortia by industry type	130
12.2	Effectiveness of MCC's technology transfer (mean scores)	133
12.3	Effectiveness of methods for technology transfer (mean scores)	135
12.4	Importance of factors facilitating technology transfer (mean scores)	136
12.5	Importance of barriers to technology transfer (mean scores)	137
12.6	Ways to improve technology transfer	138
12.7	Technology transfer variables	139
12.8	Technology transfer grid	142
12.9	Technology transfer infrastructure	144
15.1	R&D objectives for fifth-generation computers to meet the needs of the coming information society of the 1990s	174
15.2	What is fifth-generation computer systems (FGCS)?	175
15.3	Framework of FGCS	176
15.4	Organization of the Fifth-Generation Computer Committee	177
15.5	Basic configuration image of the fifth-generation computer system	179
15.6	Concept diagram showing how research and development are to progress	180
15.7	Organization of the FGCS project	181
15.8	Language system of the fifth-generation computer	185
15.9	R&D steps of system software, kernel languages, and hardware	186
16.1	Open laboratory	194

16.2	Consortium company	197
16.3	Independent division	198
17.1	Nikon's sales of cameras and semiconductor equipment	203
19.1	Siemen's corporate R&D, information and knowledge processing: scientific connections	224
19.2	Technical risk, complexity of software, and technology transfer	225
21.1	Equity members in the Biotechnology Research and Development Corporation (BRDC)	242

Tables

9.1	Percentage of consortia using these mechanisms to transfer technology	96
9.2	Relationship of transfer mechanisms to satisfaction typology	99
9.3	Relationship between technology transfer satisfaction type and performance	100
11.1	Consortium transfer matrix	117
12.1	Companies involved in six or more consortia	131
13.1	Du Pont's experience with research contracts and consortia	153
14.1	Companies participating in the Thermomechanical Model Software Development Center	163
14.2	ORNL, HTSC Pilot Center Cooperative Agreements	165
17.1	Nikon's "Consortia" R&D	204
17.2	ERATO's Yoshida Nanomechanism Project	205
17.3	ERATO's Kunitake Molecular Architecture Project	206
17.4	Researchers in ERATO by project	207
17.5	Transfer of ERATO research results	208
20.1	Themes and guidelines	234
